

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

Power Series Labs

Authoring Canvas Apps and Dataverse Tables with MCP

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

The Power Series

Lab: Authoring Canvas Apps and Dataverse Tables with MCP

- Using natural-language prompts, design and create Dataverse data model and sample data
- Using natural-language prompts, create and configure a Canvas App connected to that data

Canvas Authoring MCP Server

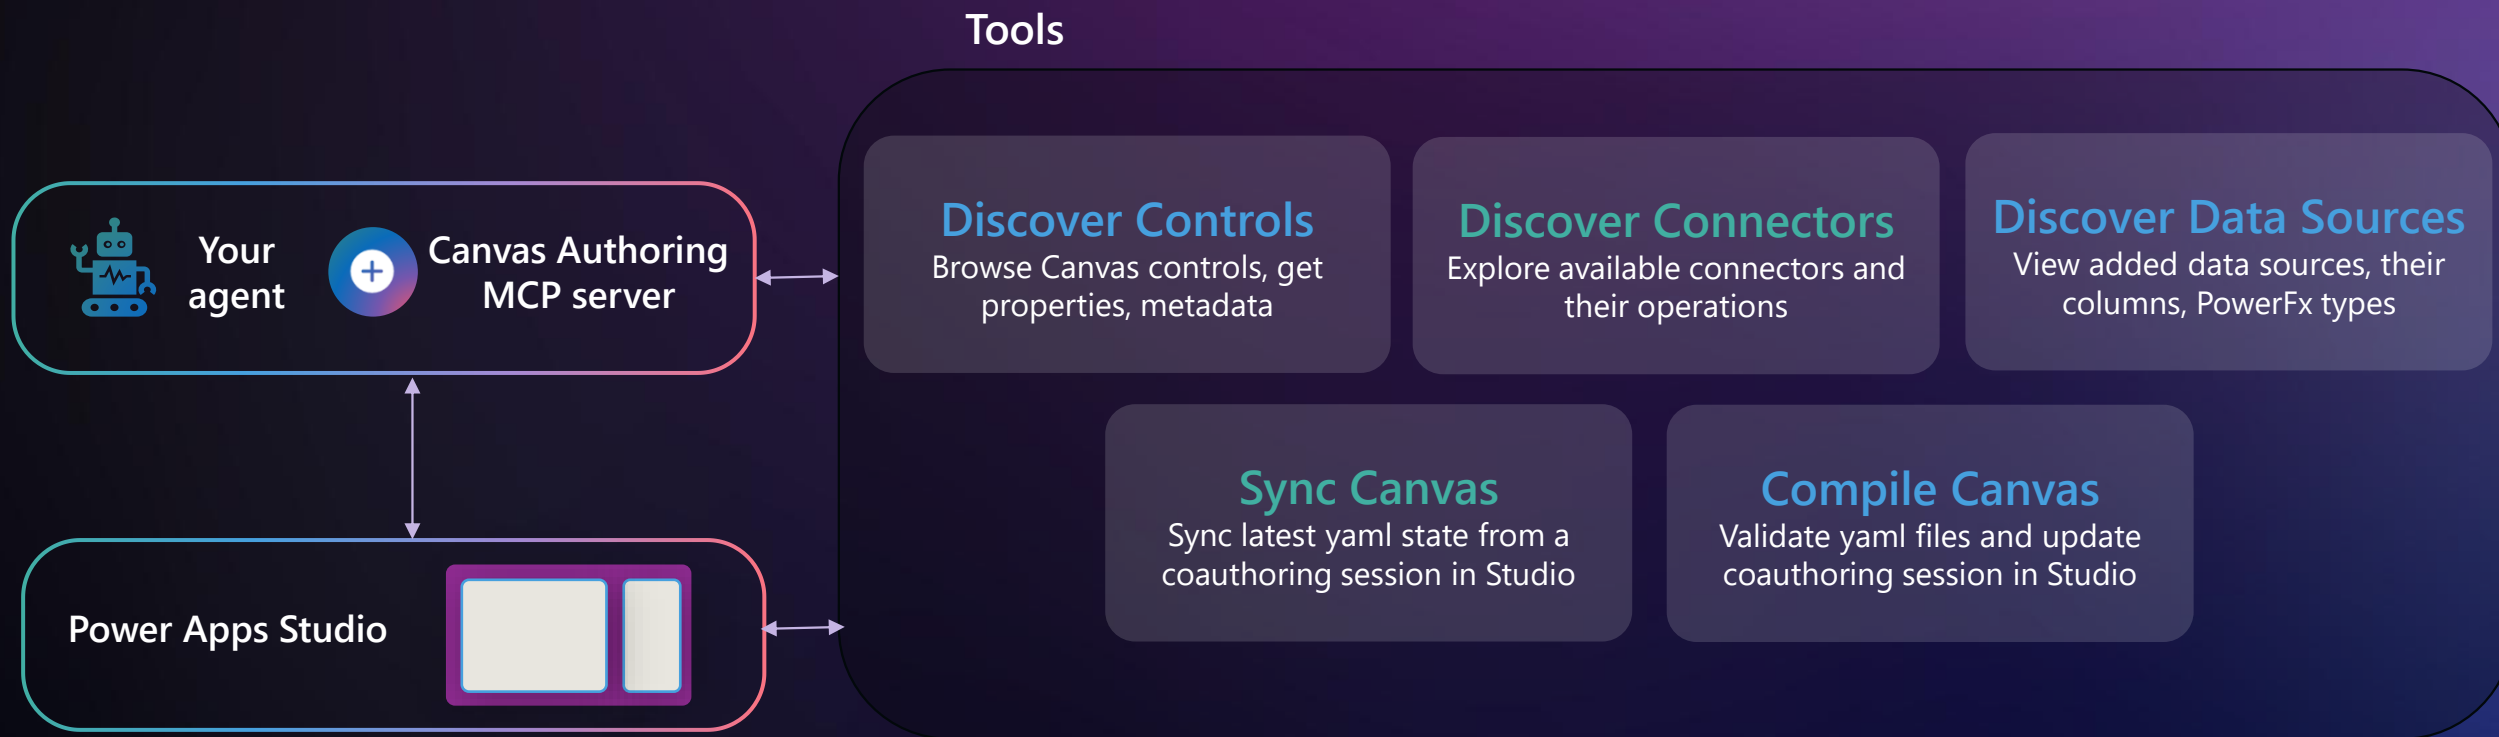

Equip your coding agent with Canvas Authoring tools

```
> /mcp

Tools for canvas-authoring-mcp
8 tools

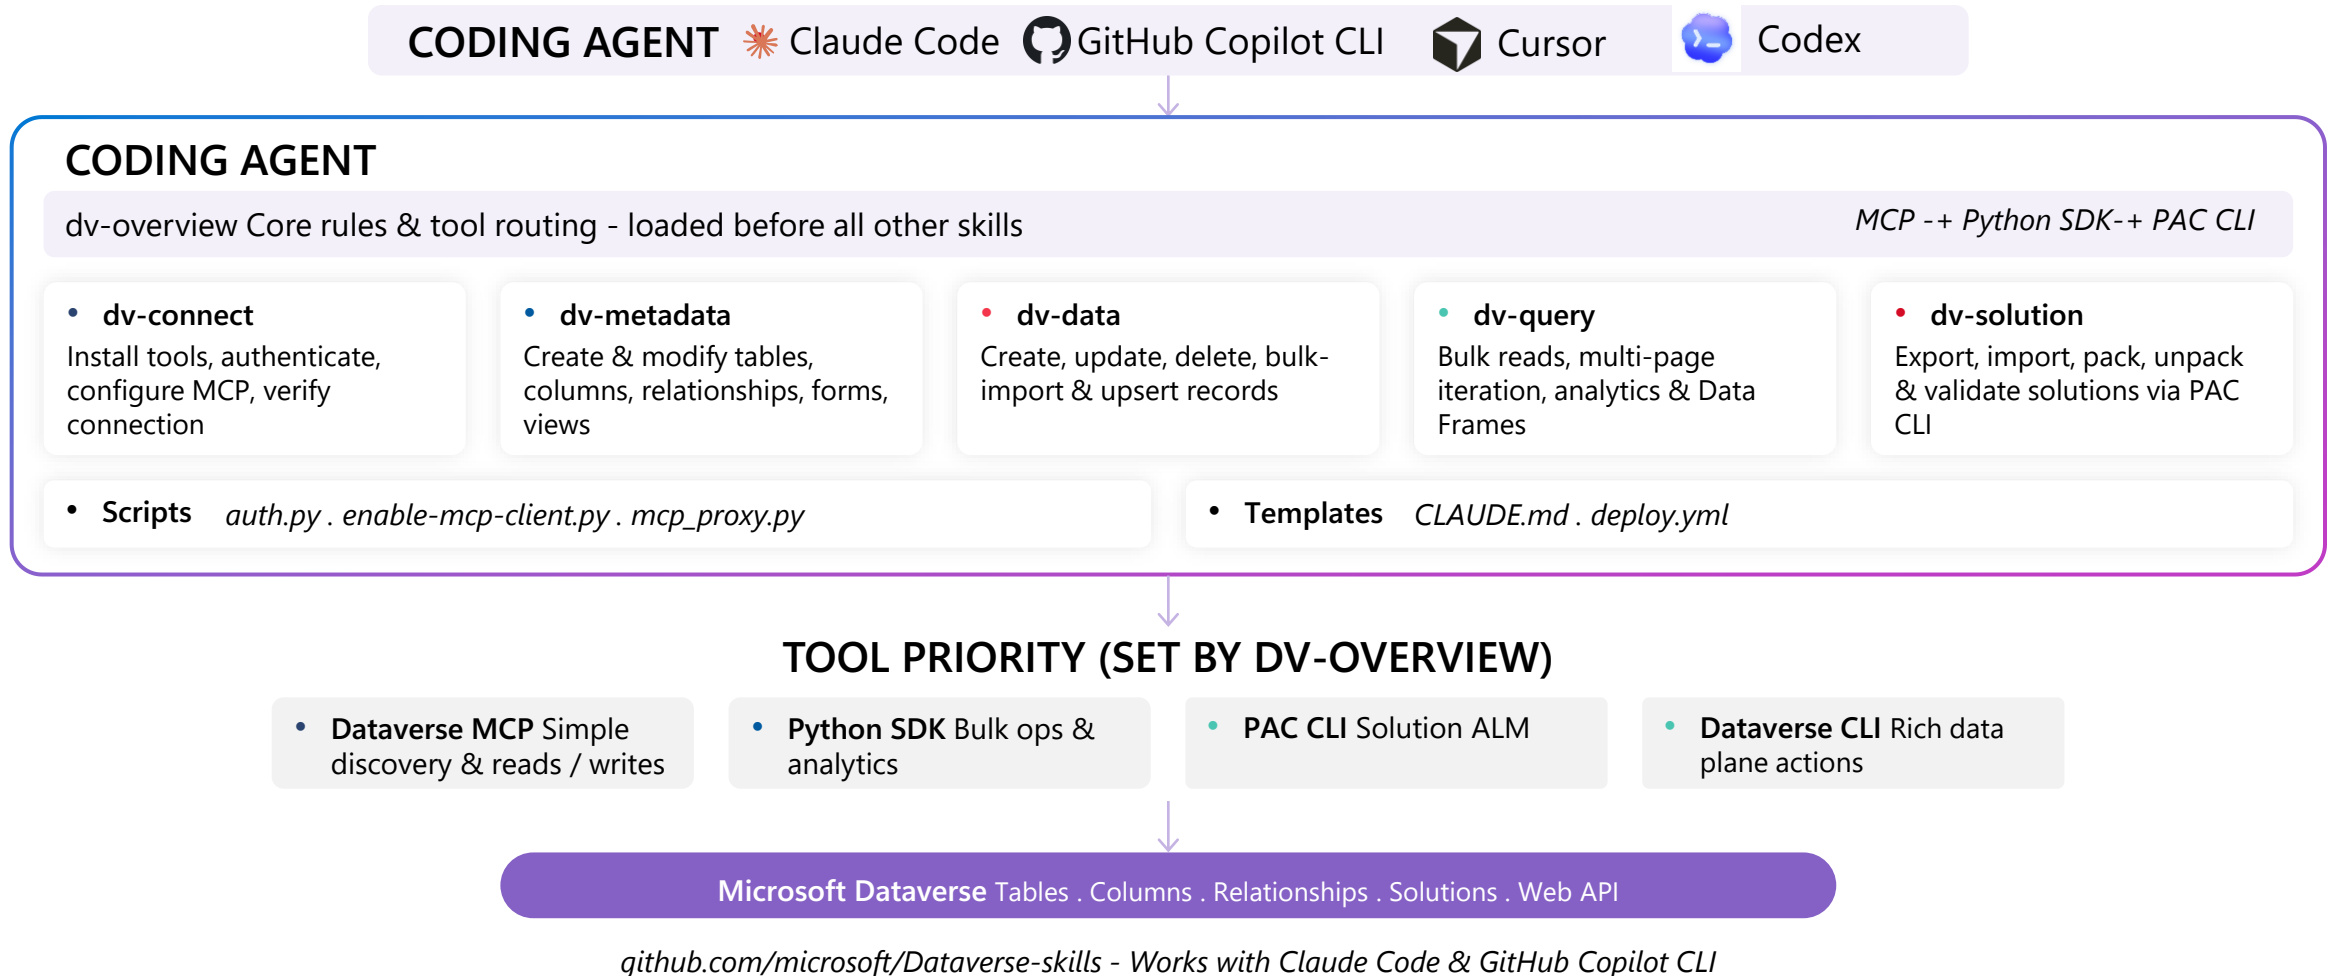

1. list_api
> 2. describe_api
3. sync_canvas
4. describe_control
↓ 5. get_data_source_schema

↑↓ to navigate · Enter to select · Esc to back
```

Dataverse Plugin

How the pieces fit together - 8 skills, 3 scripts, project templates, and a tool-priority chain routing through MCP, Dataverse SDK for Python, PAC CLI and Dataverse CLI.

Add Dataverse plugin to your coding agent

Claude Code

Claude Code CLI

INSTALL

```
/plugin install dataverse@claude-plugins-official
```

GitHub Copilot

GitHub Copilot CLI

INSTALL

```
/plugin install dataverse@awesome-copilot
```

Build the app and its data foundation faster with AI

Use an AI coding assistant to describe the business solution in plain language, then generate the Canvas app and the Dataverse tables behind it.

Business scenario: Employee request app

A team needs an app to submit, route, and track internal service requests.

- Describe the process and the app experience instead of building every screen manually.
- Generate the Dataverse tables and fields needed to store requests, owners, statuses, and follow-up actions.
- Connect the Canvas app to that business data.
- Review, refine, and publish the solution with full control over the final result.

Impact: faster solution delivery, less repetitive development, a stronger data foundation, and more capacity to focus on business needs.
