

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

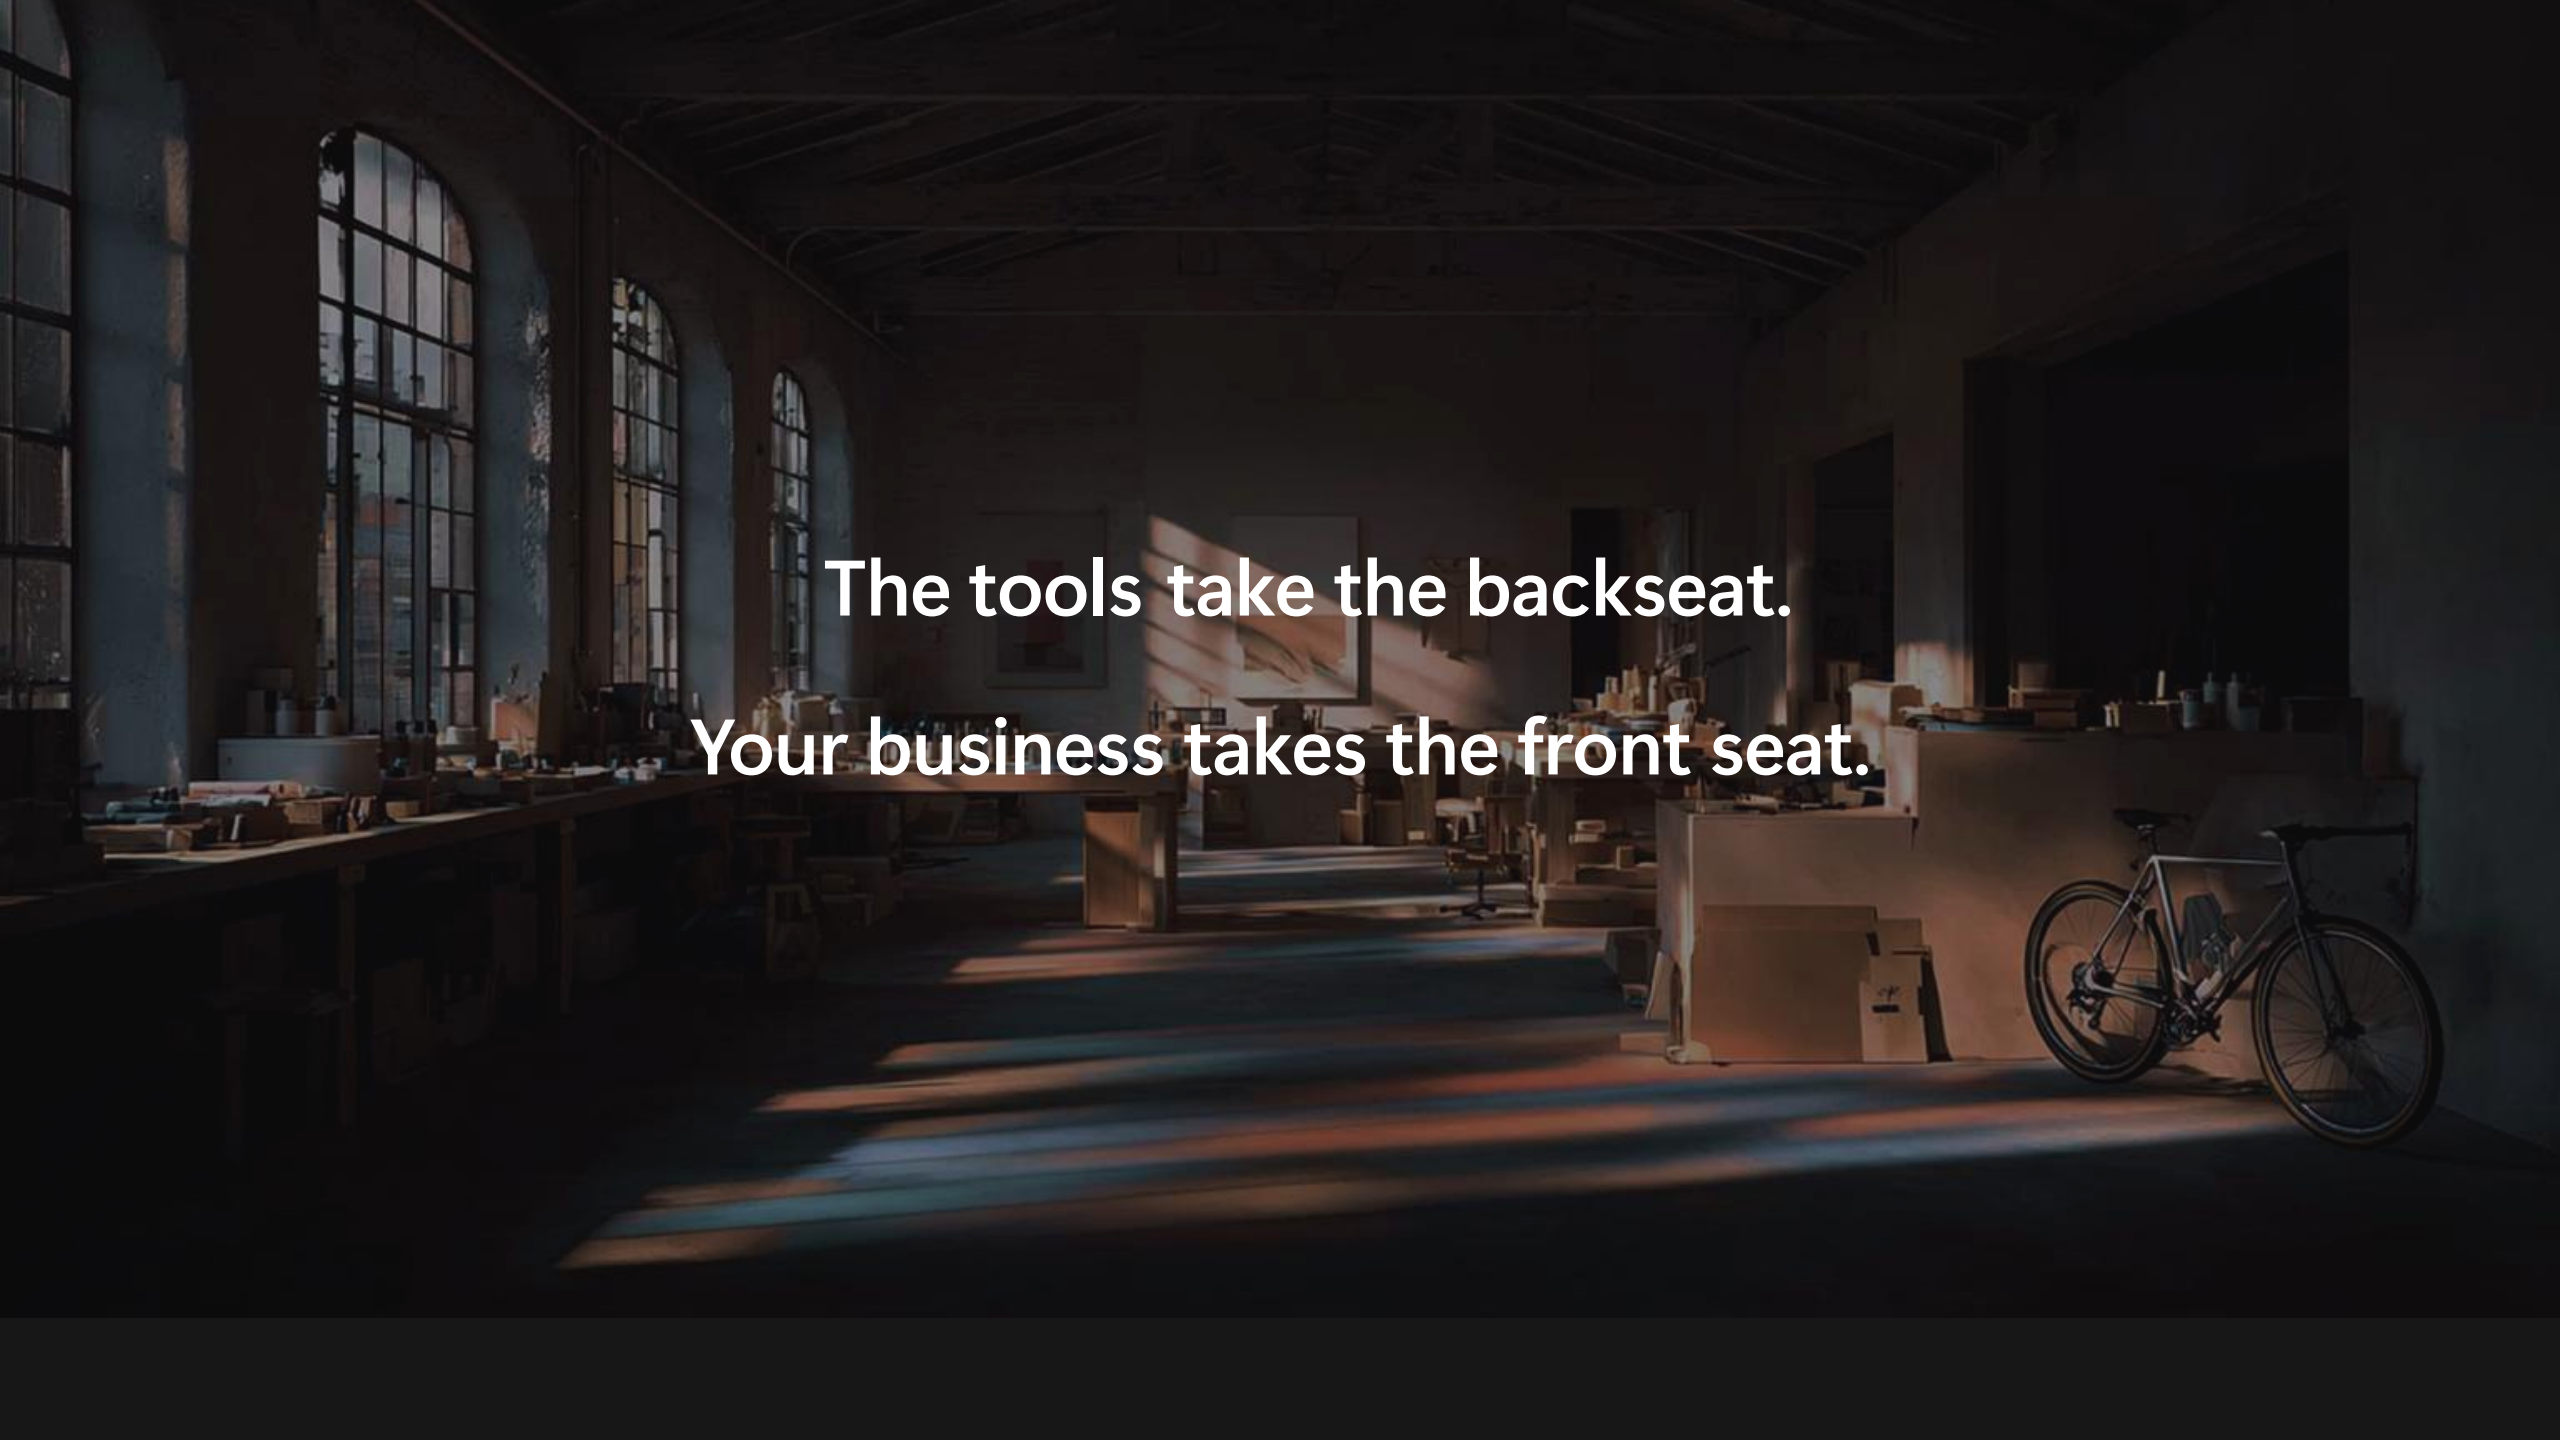

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light is streaming, creating long, dramatic shadows across the floor and workbenches. The space is filled with various tools, materials, and workbenches, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

AI-Powered Modern UX for Model-Driven Apps

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

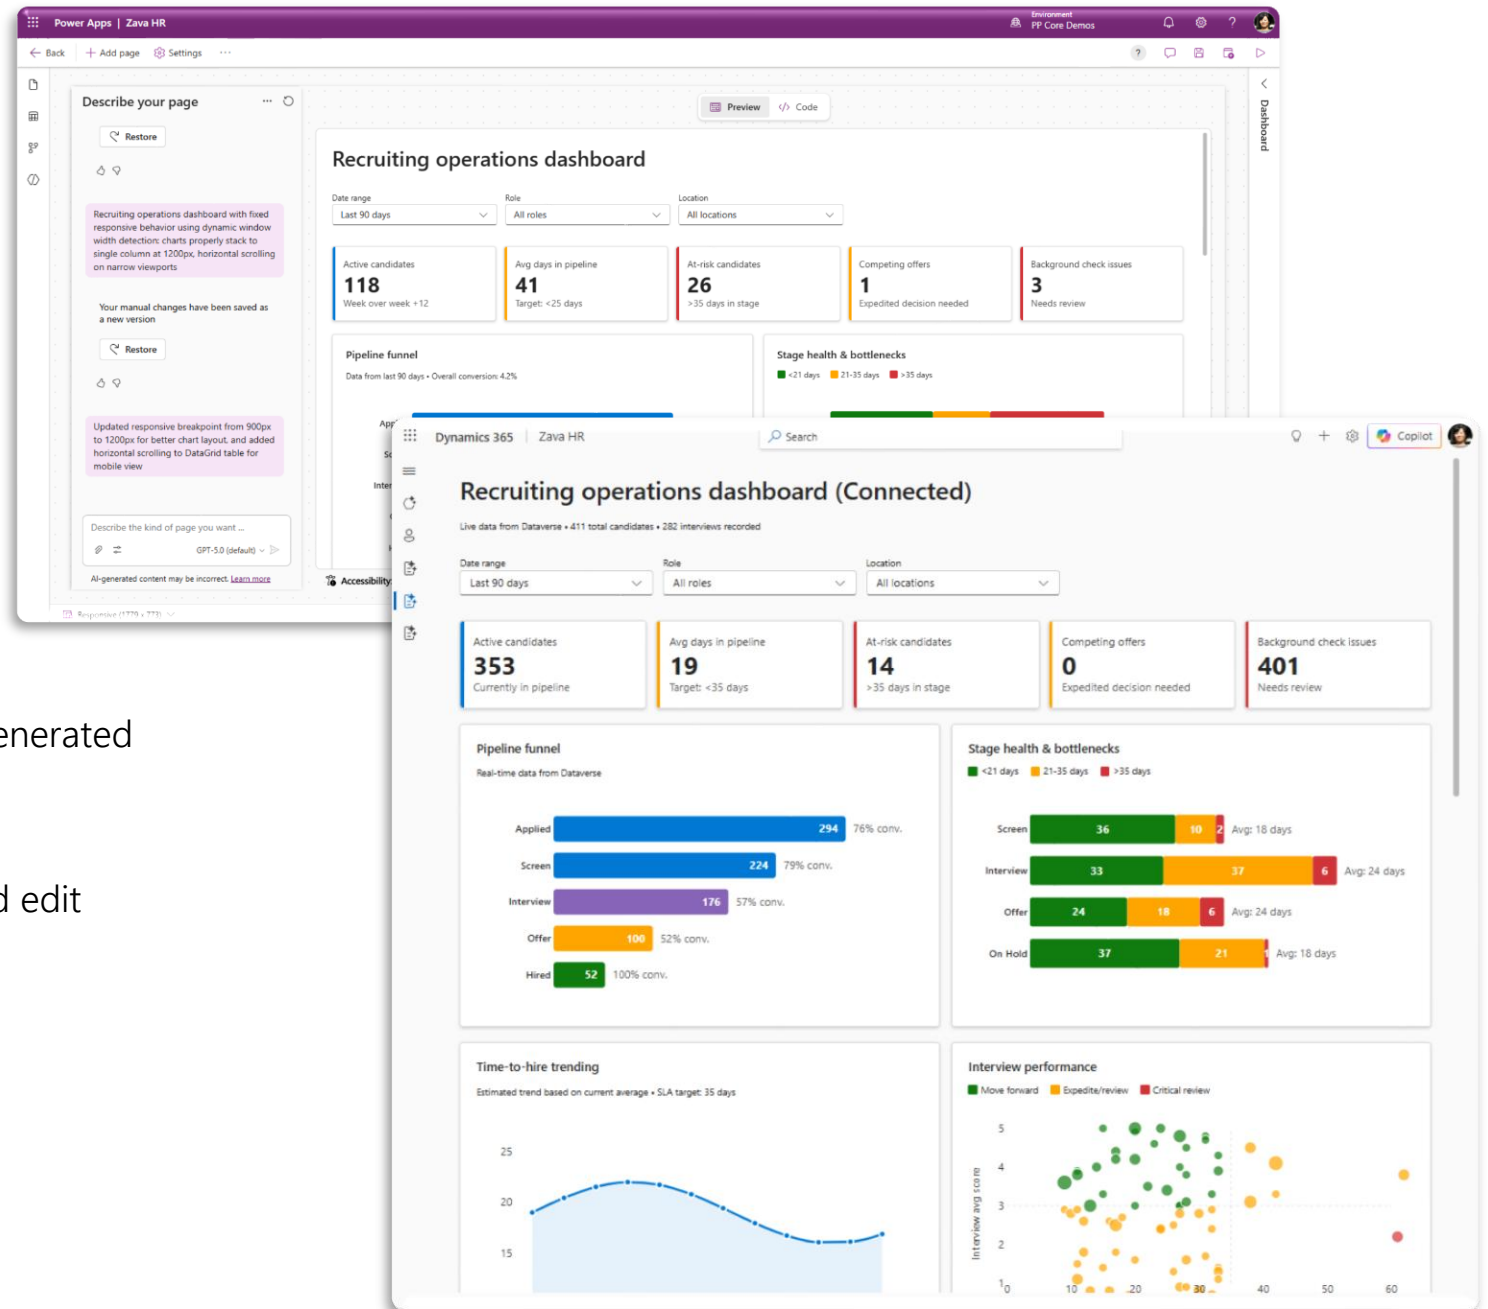

The Power Series

Lab: AI-Powered Modern UX for Model-Driven Apps

- Create a Generative page in a Model-Driven App from natural language with Dataverse as its data source using an AI skill
- Refine the page with style and behavior prompts
- Build another complex and sophisticated page

Generative Pages

- ✓ Extend your model-driven app with React pages generated from natural language
- ✓ Use external tools like GitHub Copilot to create and edit generative pages

Generative Pages In Model-driven Apps

A native experience inside model-driven apps.

Describe the page, ship real React and TypeScript code fully connected to Dataverse — full UX flexibility, pro-code grade output, no rigid templates.

Why now

Custom UX is the bottleneck

- Model-driven apps are powerful for data and process, but rigid for modern UX
- Custom Pages, Web Resources, PCF, and pro-code React take weeks and bottleneck delivery
- Customers want consumer-grade UX inside their MDA & D365 apps — fast
- AI code generation finally makes this practical at enterprise scale

What it is

Built into Power Apps, not a side tool

- Add a page to any model-driven app, describe it in natural language, ship it
- Full UX flexibility — no rigid templates, no layout constraints
- Pro-code output: real, editable React and TypeScript
- Edit locally with GitHub Copilot or other AI code tools — CLI deployment supported
- Native Dataverse and virtual entity support (SharePoint, F&O, SQL, Oracle and Custom)
- Solution-aware, ALM-ready, governed across environments

Why it matters

Modern UX with Enterprise grade trust

- Drop modern UX into Sales, Service, Field Service — no rip-and-replace. Honors the theme of your model-driven app.
- Citizen developers prompt; pro developers refine the React.
- Built on Power Platform governance, security, and ALM.

Modernize the user experience faster with AI

Generate and refine rich, interactive app experiences from natural language, grounded in your Dataverse business data.

Business scenario: Order Management

An operations team relies on a basic order app but needs a more efficient way to manage orders.

- Generate an interactive Orders page connected to real order, product, and customer data.
- Highlight high shipping fees and surface important information at a glance.
- Expand an order to view details, shipping information, and delivery location together.
- Create a richer order-entry experience with product browsing, cart controls, shipping, and payment details.

Impact: faster portal delivery, less duplicated development, secure data capture, and greater reuse of existing developer skills and code.
