

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

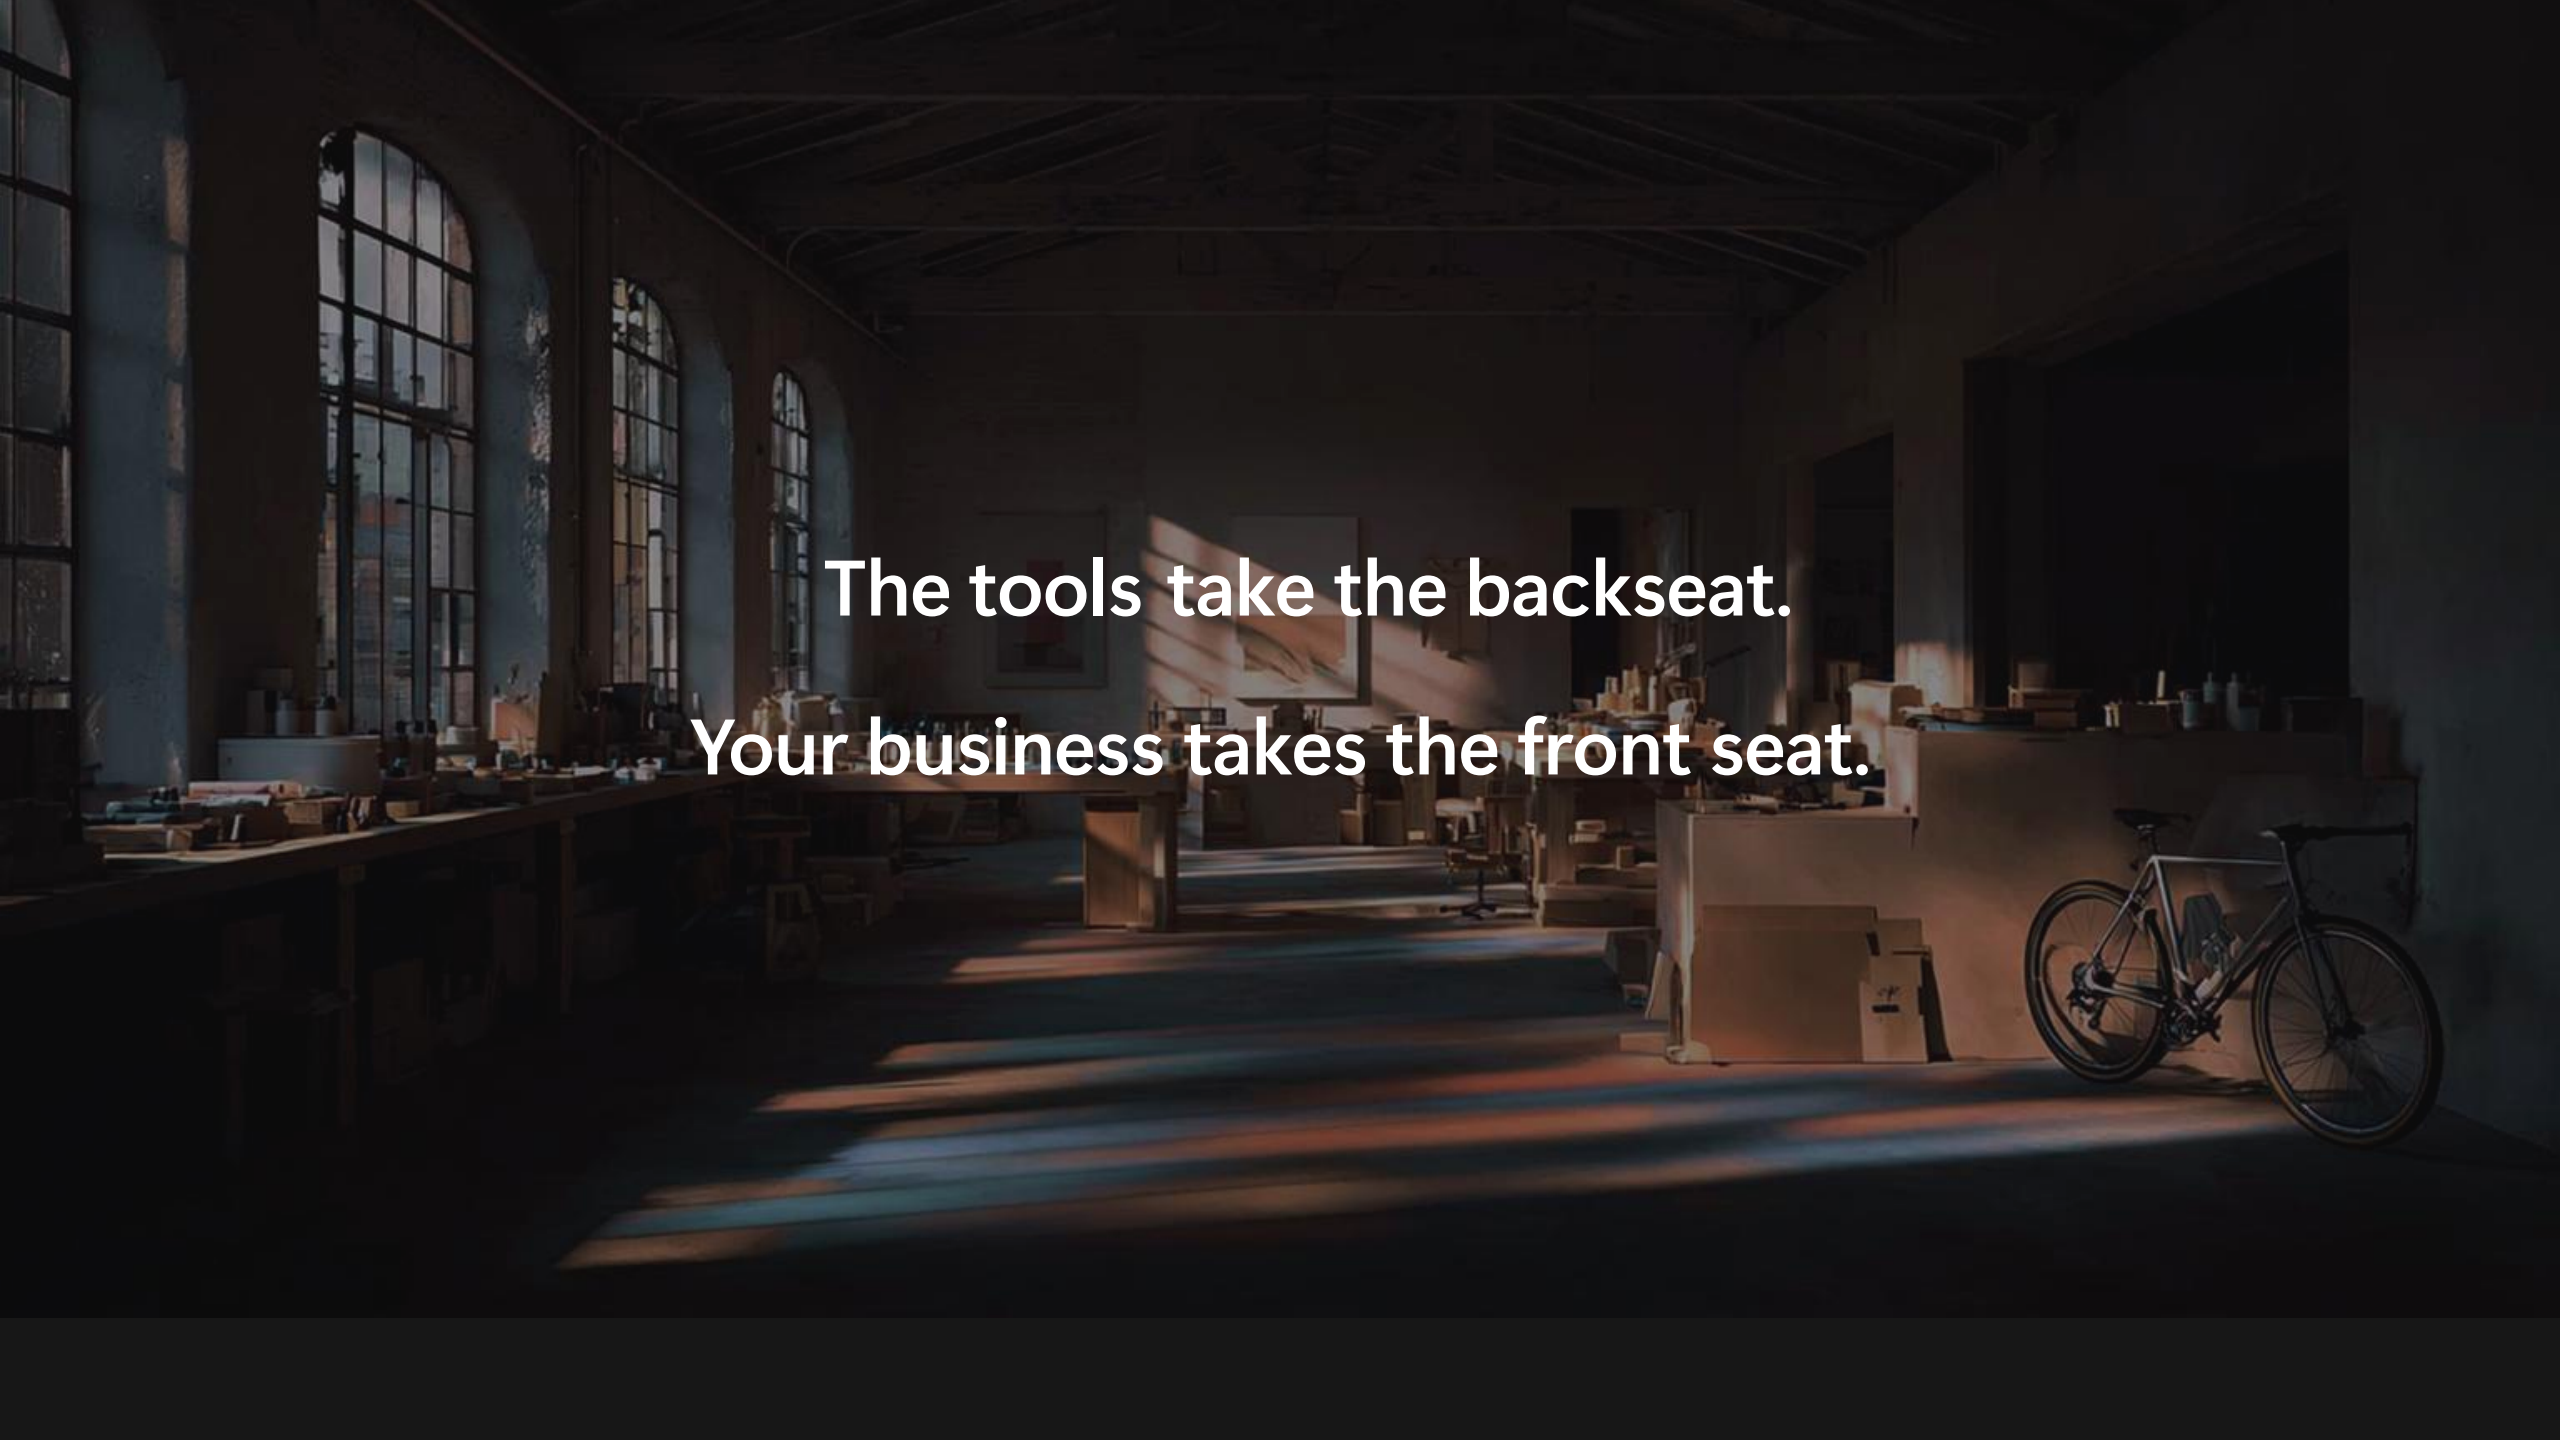

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which some light is visible. The interior is filled with workbenches, various tools, and materials, creating a sense of a busy, creative space. A bicycle is parked on the right side of the frame. The lighting is dramatic, with strong shadows and highlights, emphasizing the textures and forms within the room. The text is overlaid in the center, providing a message about prioritizing business over tools.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

Automate Work in Power Apps with Supervised Agents

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

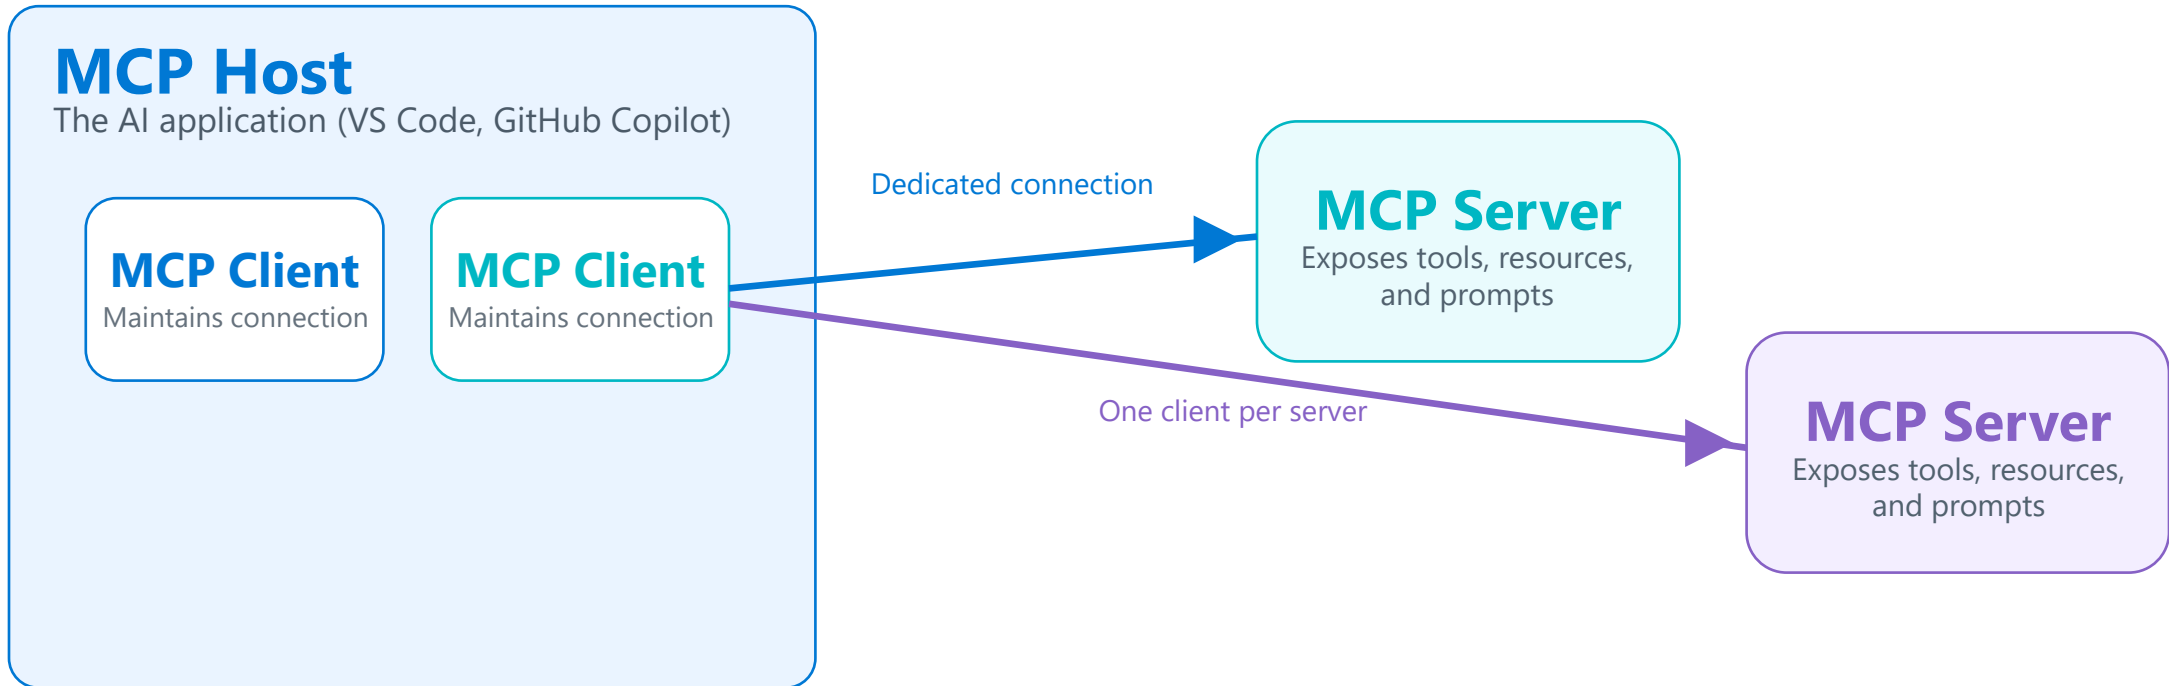

The Power Series

Lab: Automate Work in Power Apps with Supervised Agents

- Configure Copilot Studio agents that use Power Apps MCP server tools.
- Add email and Dataverse triggers that automate agent execution.
- Publish agents into Agent Feed for review inside a model-driven app.

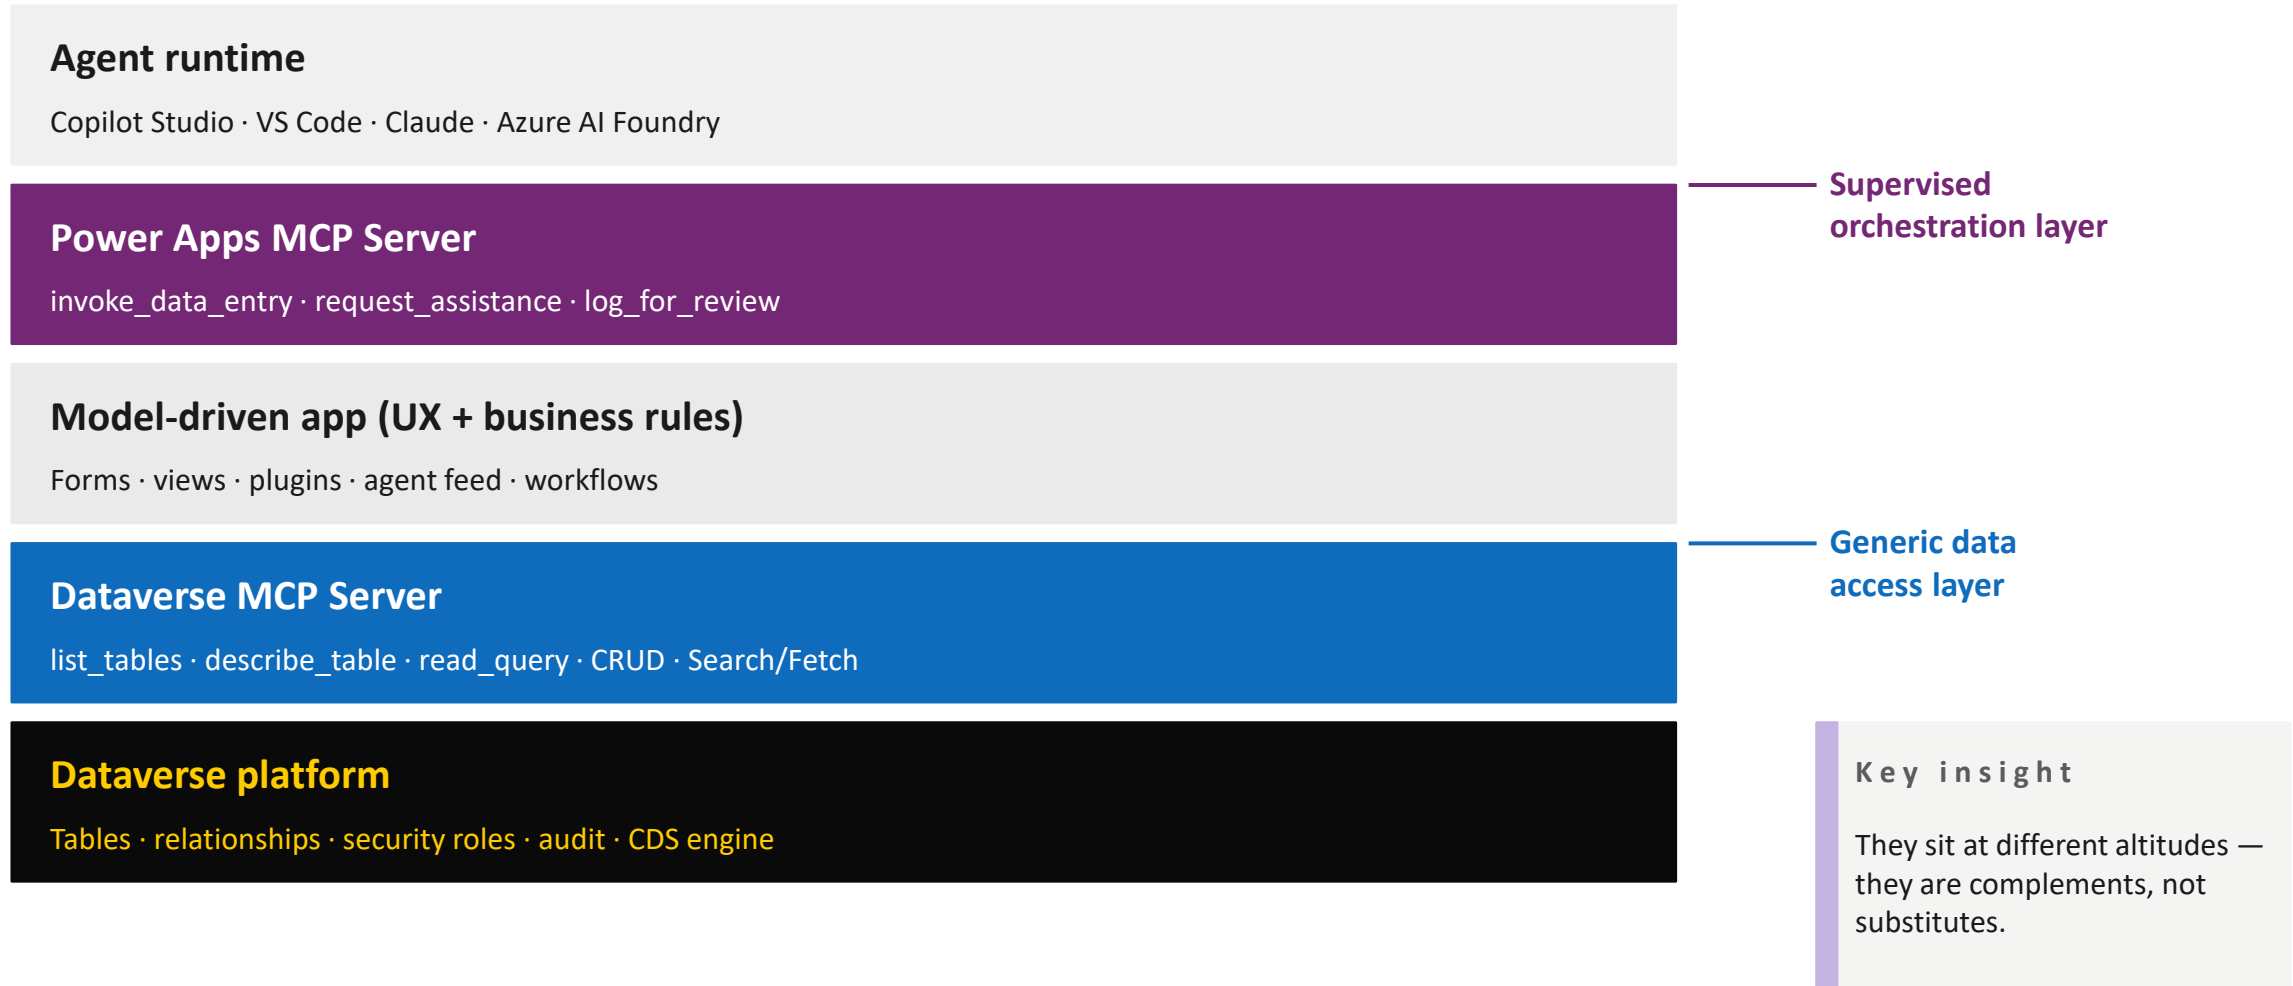

MCP architecture: Client-server model

MCP Host: The AI application (VS Code, GitHub Copilot)
MCP Client: Maintains connection to an MCP server
MCP Server: Exposes tools, resources, and prompts that AI can use

Host creates one MCP Client per MCP Server
Each client maintains a dedicated connection
Servers expose Tools, Resources, and Prompts

Where each server fits in the Power Platform stack

Choose Power Apps MCP when...

Unstructured-to-structured intake with review

Example: *Customer emails parcel claims; agent extracts claim type, parcel ID, amount → review record in clerk's feed.*

Why this server: *invoke_data_entry* is purpose-built for this; clerk sees side-by-side email + draft record.

Agent must hand off to a named user

Example: *Permit application missing a required attachment → request_assistance fires a task to the case owner.*

Why this server: Agent Feed delivers a deep-linked, actionable task — no manual email routing.

Compliance requires human approval before writes

Example: *Updates to regulated finance, HR or legal records in a model-driven app.*

Why this server: Built-in approval canvas keeps the audit trail inside Dataverse, not in side channels.

Existing model-driven app needs an agent layer

Example: *Extending an existing Dynamics 365 Customer Service deployment with autonomous triage.*

Why this server: Agent Feed becomes the natural surface for agent-human handoff inside the app the team already uses.

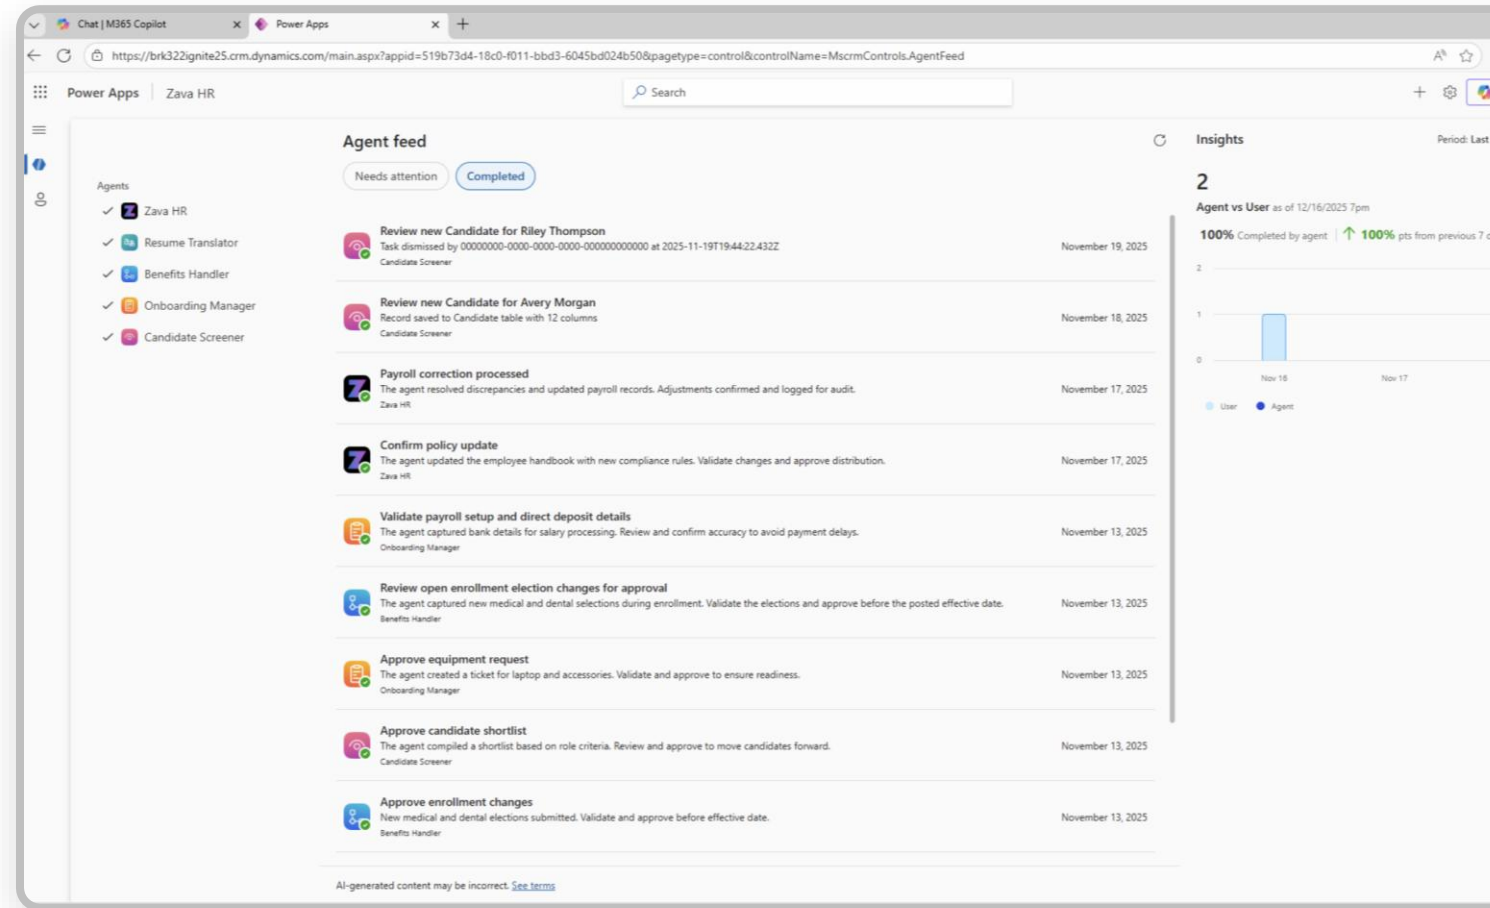

Agent Feed

Agents + humans getting work done in a single hub

***Centralized command center:** Agent feed gives you a unified view to monitor, manage, and collaborate with agents across workflows—no toggling between tools.*

***Real-time collaboration:** Agents and users stay in sync through timely notifications, status updates, and contextual prompts.*

***Actionable intelligence:** The feed surfaces insights, suggestions, and automation triggers, empowering users to act quickly—prioritizing and unblocking agentic flows.*

Automate manual processes with human review when it matters.

The Power Apps MCP Server gives AI agents a secure way to work with your business apps and route exceptions to people for review.

Business scenario: Invoice processing with exception review

The finance team receives invoices by email and spends time entering details, checking records, and routing exceptions.

- An invoice email automatically starts the process.
- The agent captures the details and updates the finance record.
- If the amount, vendor, or purchase order does not match, the issue appears in Agent Feed.
- A finance employee reviews and approves the exception inside the business app.

Impact: less manual tracking and data entry, faster processing, reduced errors, and human review only where it adds value.
