

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

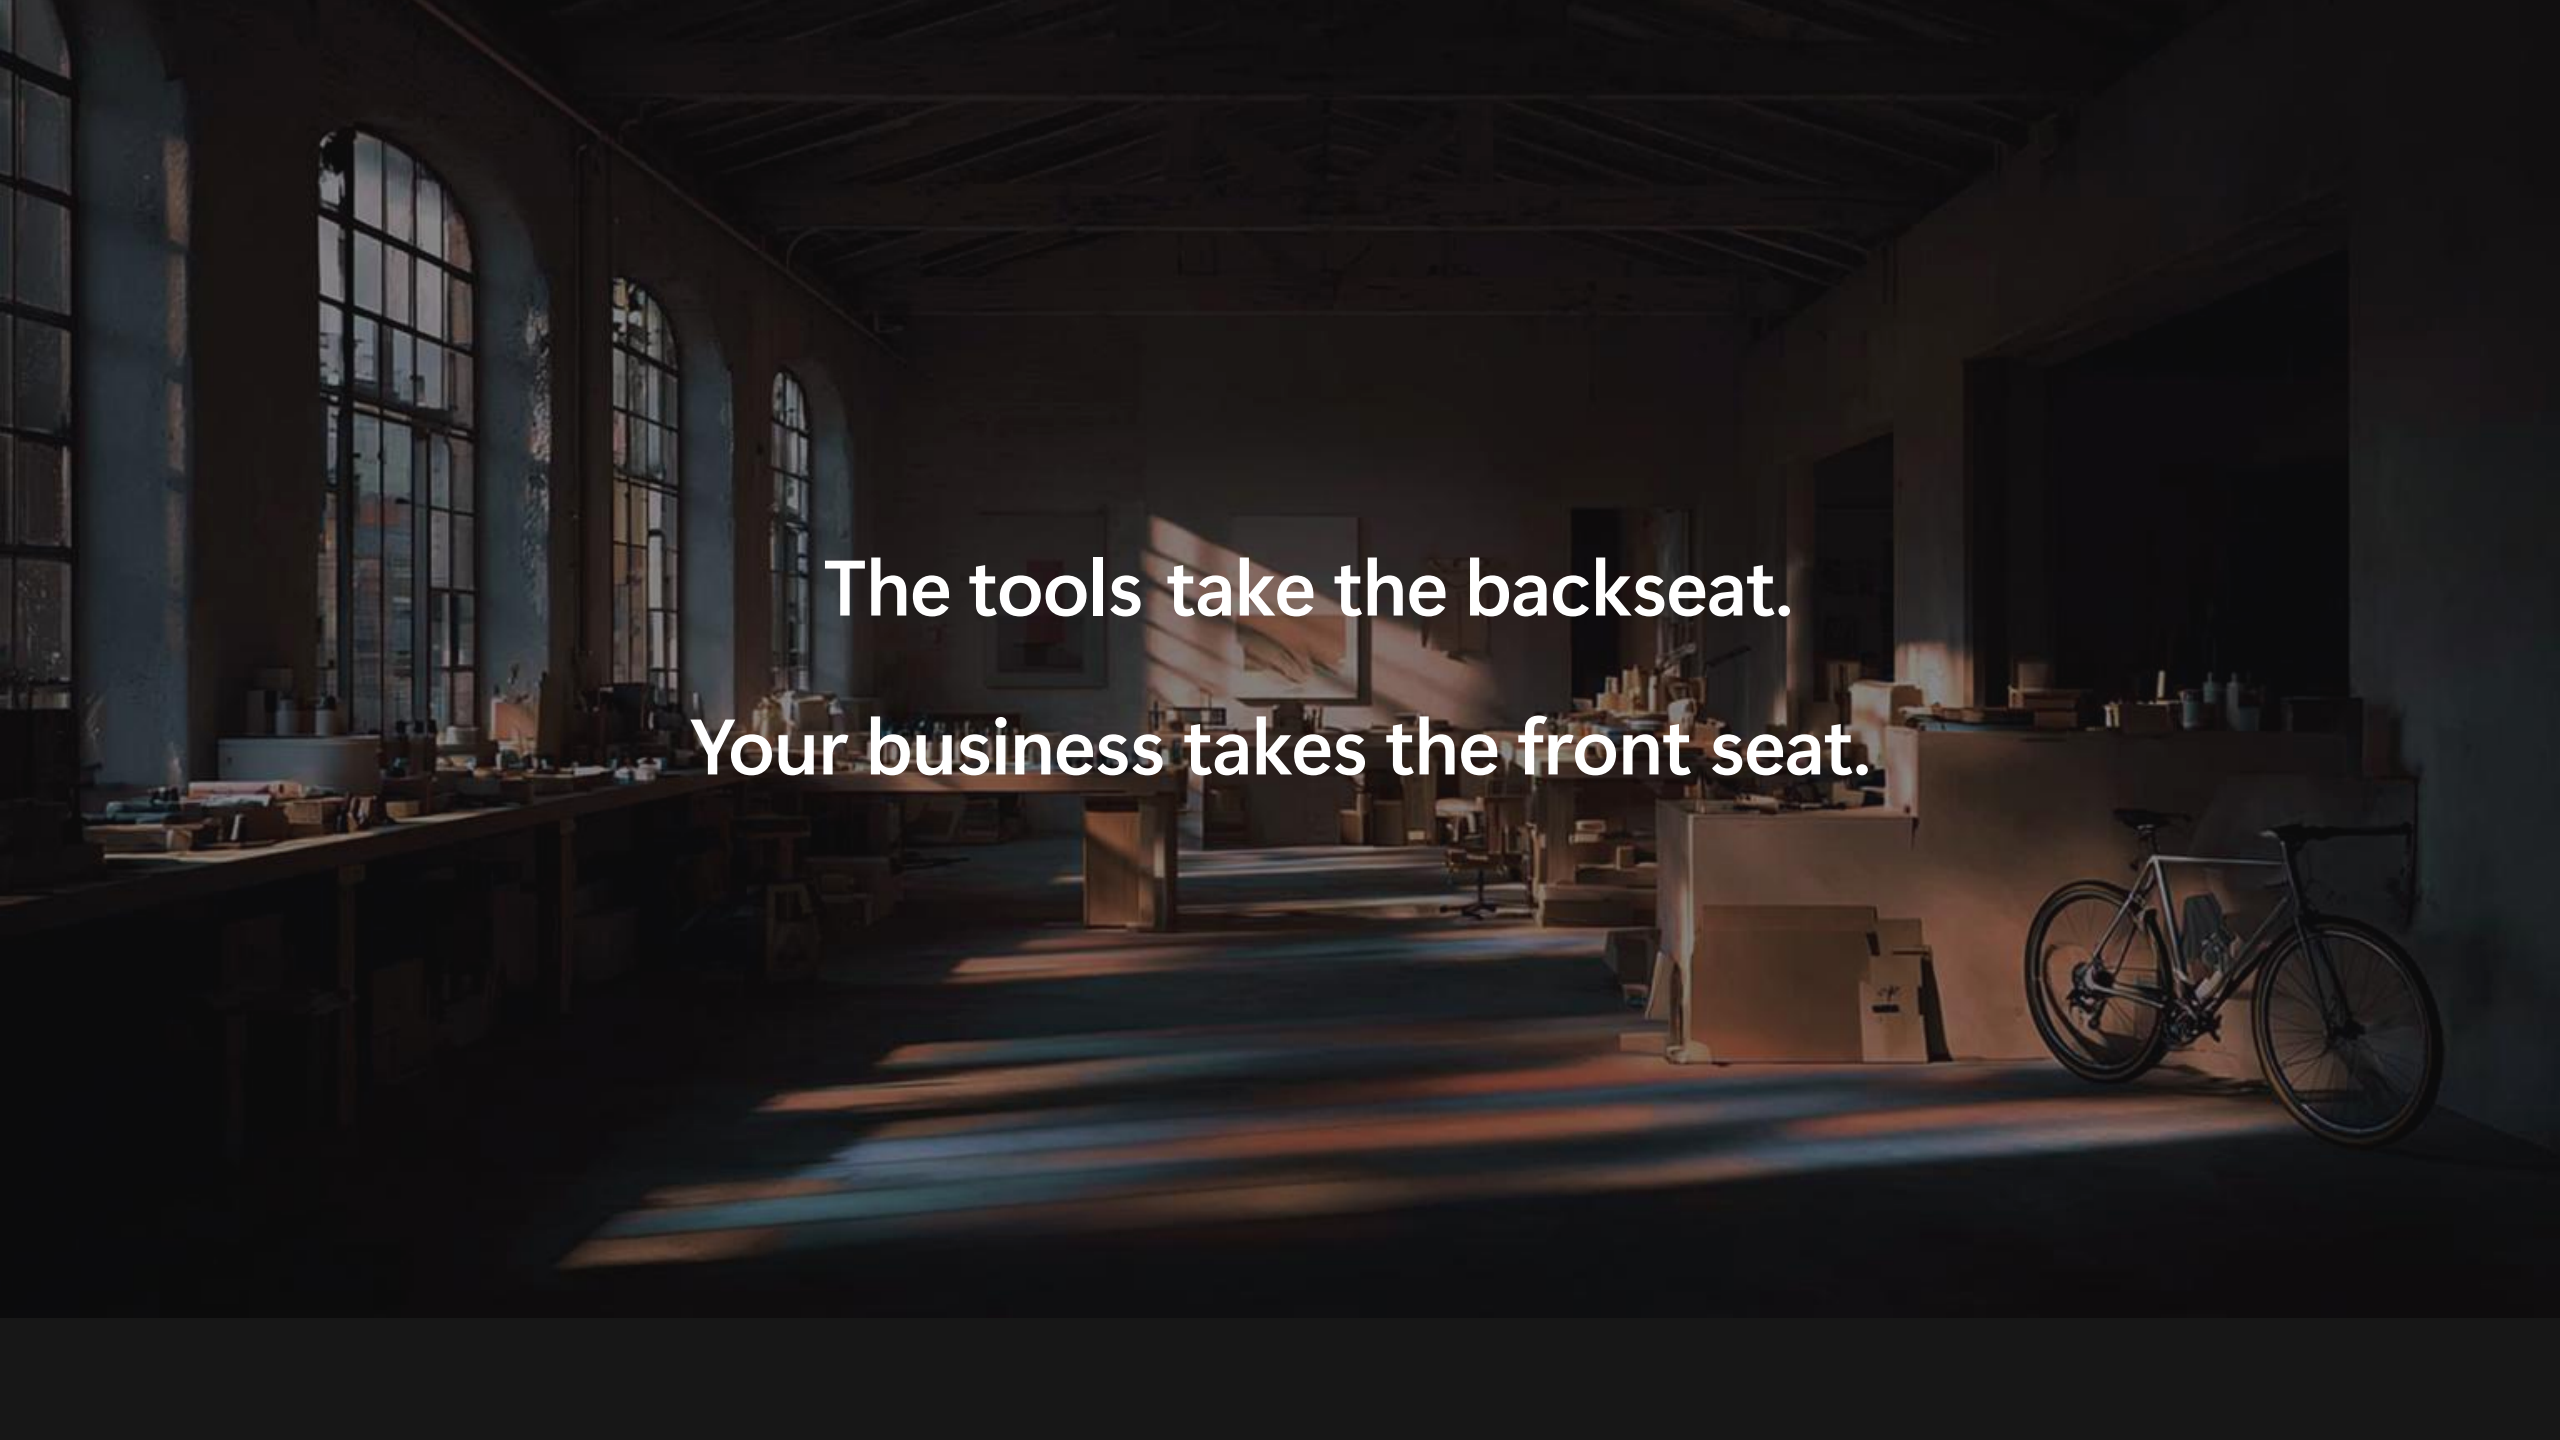

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light is streaming, creating long, dramatic shadows across the floor and workbenches. The space is filled with various tools, materials, and workbenches, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

Automation Foundations – Cloud Flows

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

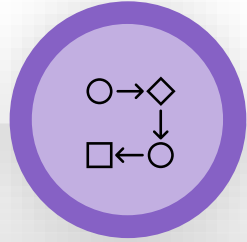

The Power Series

Lab: Automation Foundations – Cloud Flows

- Create an automated cloud flow triggered by Dataverse events.
- Build a conditional, multi-tier approval process that respects approval outcomes.

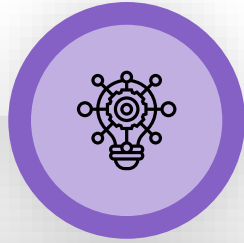

The Modern Automation Spectrum

From structured, deterministic workflows to adaptive, agentic automations

Rule-Based Automation

*Automations that follow **rigid, predetermined rules**, executing actions based on predefined triggers.*

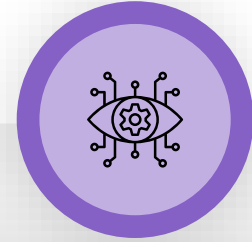

AI-Enhanced Automation

*Step-by-step automations infused with **AI-powered actions** to handle more complex scenarios and make basic decisions.*

Agentic Automation

*Automations that combine AI models with natural language understanding to **plan, reason, adapt, and orchestrate workflows***

Autonomous Agentic Automation

*Agents **autonomously interpret goals, plan tasks, and learn** from experience, with a varying level of human oversight*

Structured

Adaptive

Power Automate

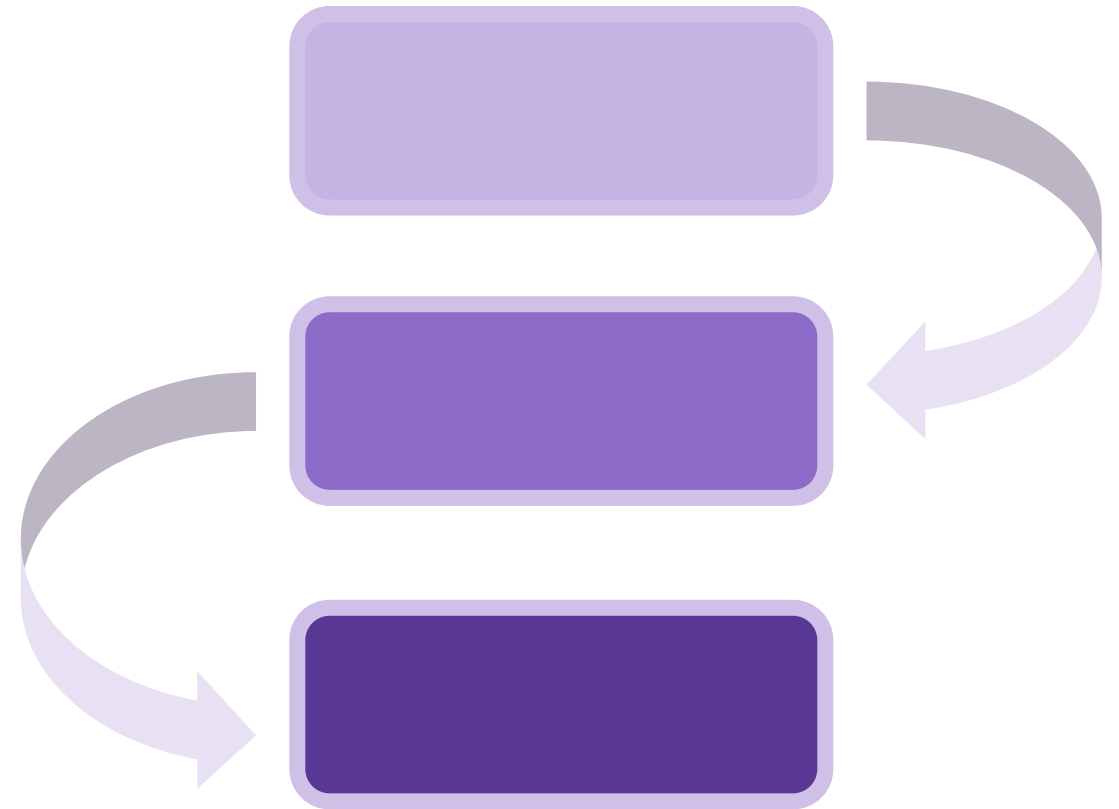

Copilot Studio

Rule-Based Automation

Rule-based automations are:

- **Structured** – they operate on predefined logic, steps, and conditions
- **Deterministic** – the same inputs always produce the same outputs
- **Predictable** – they deliver uniform results that are simple to review and troubleshoot

Rule-based automations have been the standard approach for years

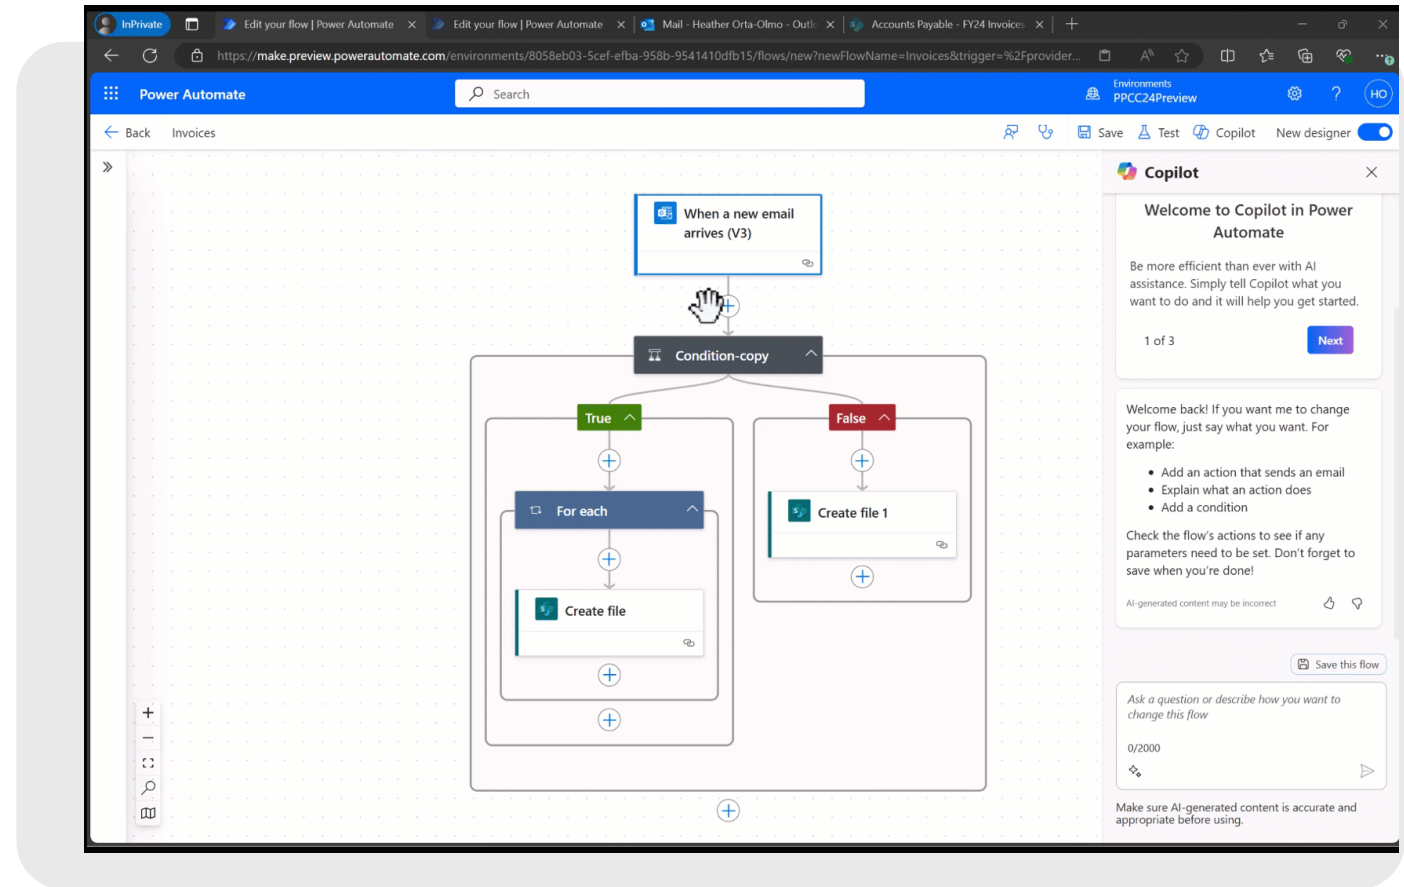

Power Automate Digital Process Automation (DPA) "Cloud Flows"

Create structured, API-based automations that connect to your applications and automate tasks and processes

- Create **cloud flows** using a flow designer or natural language
- Leverage the library of **templates** for quick automation creation
- Add a workflow **trigger** and **actions** to create your step-by-step process
- **Connect** to your business applications with our 1,400+ API connector library

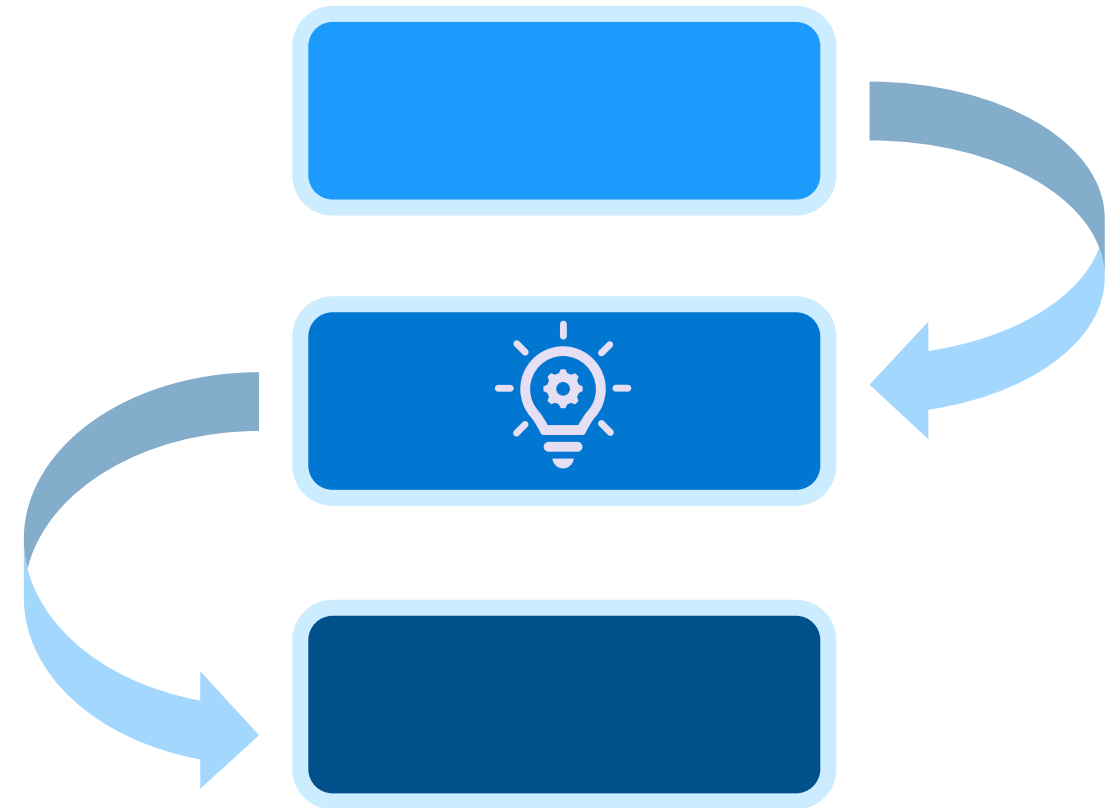

AI-Enhanced Automation

AI-enhanced automations are:

- **Structured, but augmented** – the structure and rules still exist; AI performs a task within it
- **Assistive** – use AI within a step to extract, classify, or interpret information for downstream steps
- **Perceptive** – can handle unstructured content such as documents, email text, and sentiment

AI-enhanced automations bring intelligence into the step-by-step workflows we already trust

Enhancing Rule-Based Workflows with AI

By adding an AI-powered step to this workflow, we provide more adaptability to the process

 Routing decision: billing or sales

Instructions

...

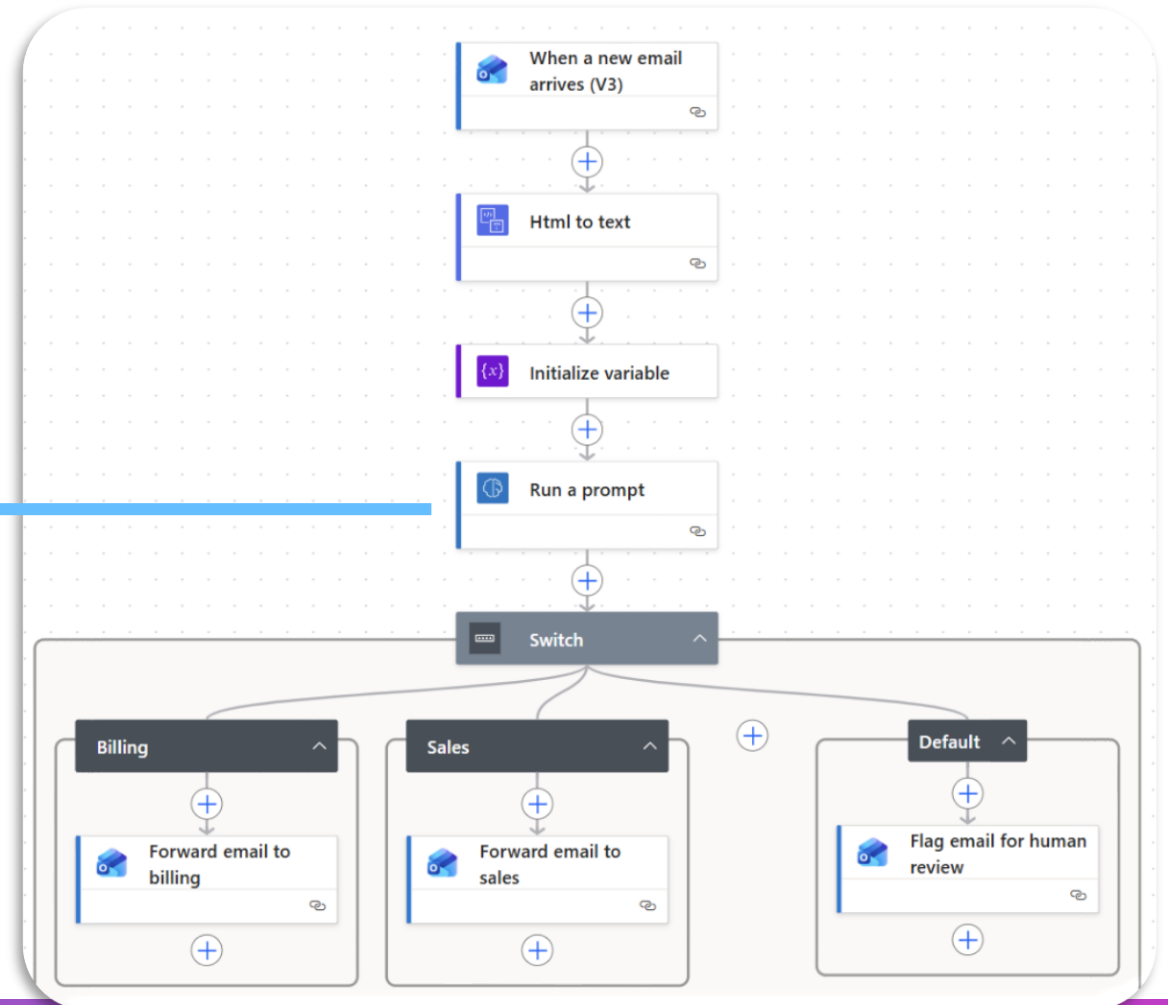

Model: GPT-5 reasoning

Test

Based on the contents of this email, email content, decide if this email should be routed to our billing team or sales team. Respond with either "Billing" or "Sales".
If the email does not fit either category, respond with "Unknown", so we can flag the email for human review.

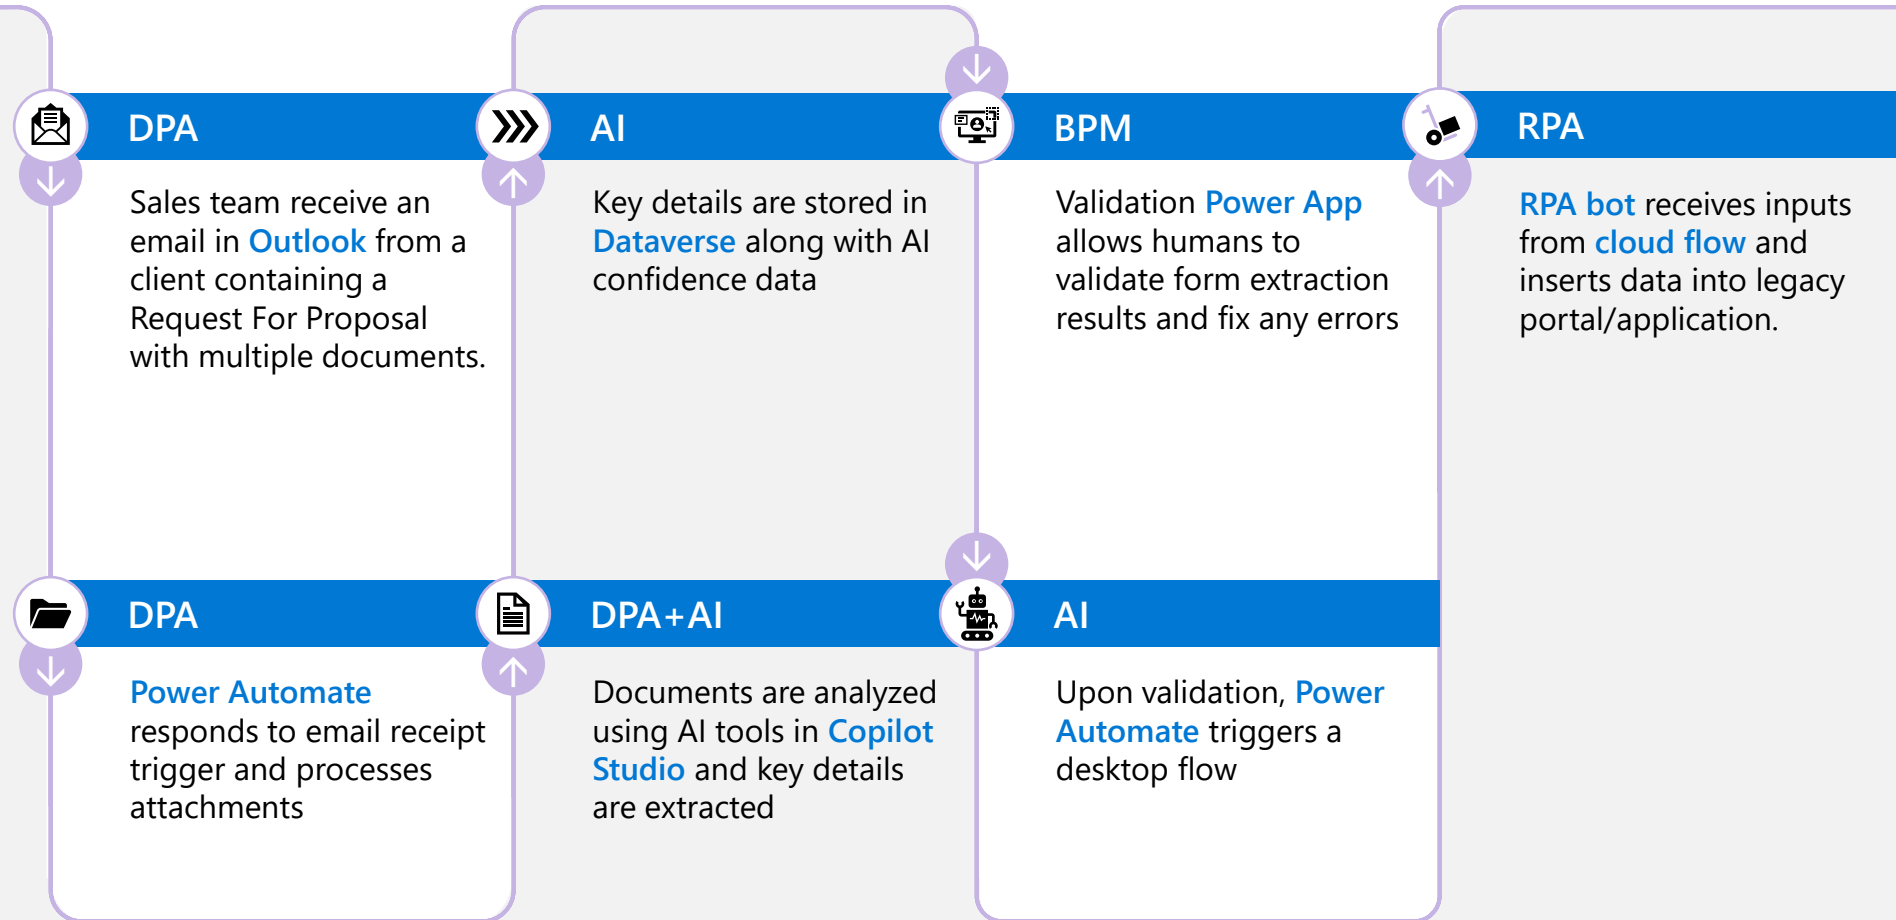

*AI model uses natural language understanding to **capture intent**, rather than relying on keywords*

Updated: Customer service email routing automation

Intelligent document processing

End-to-end document automation leveraging Power Platform native capabilities
