

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

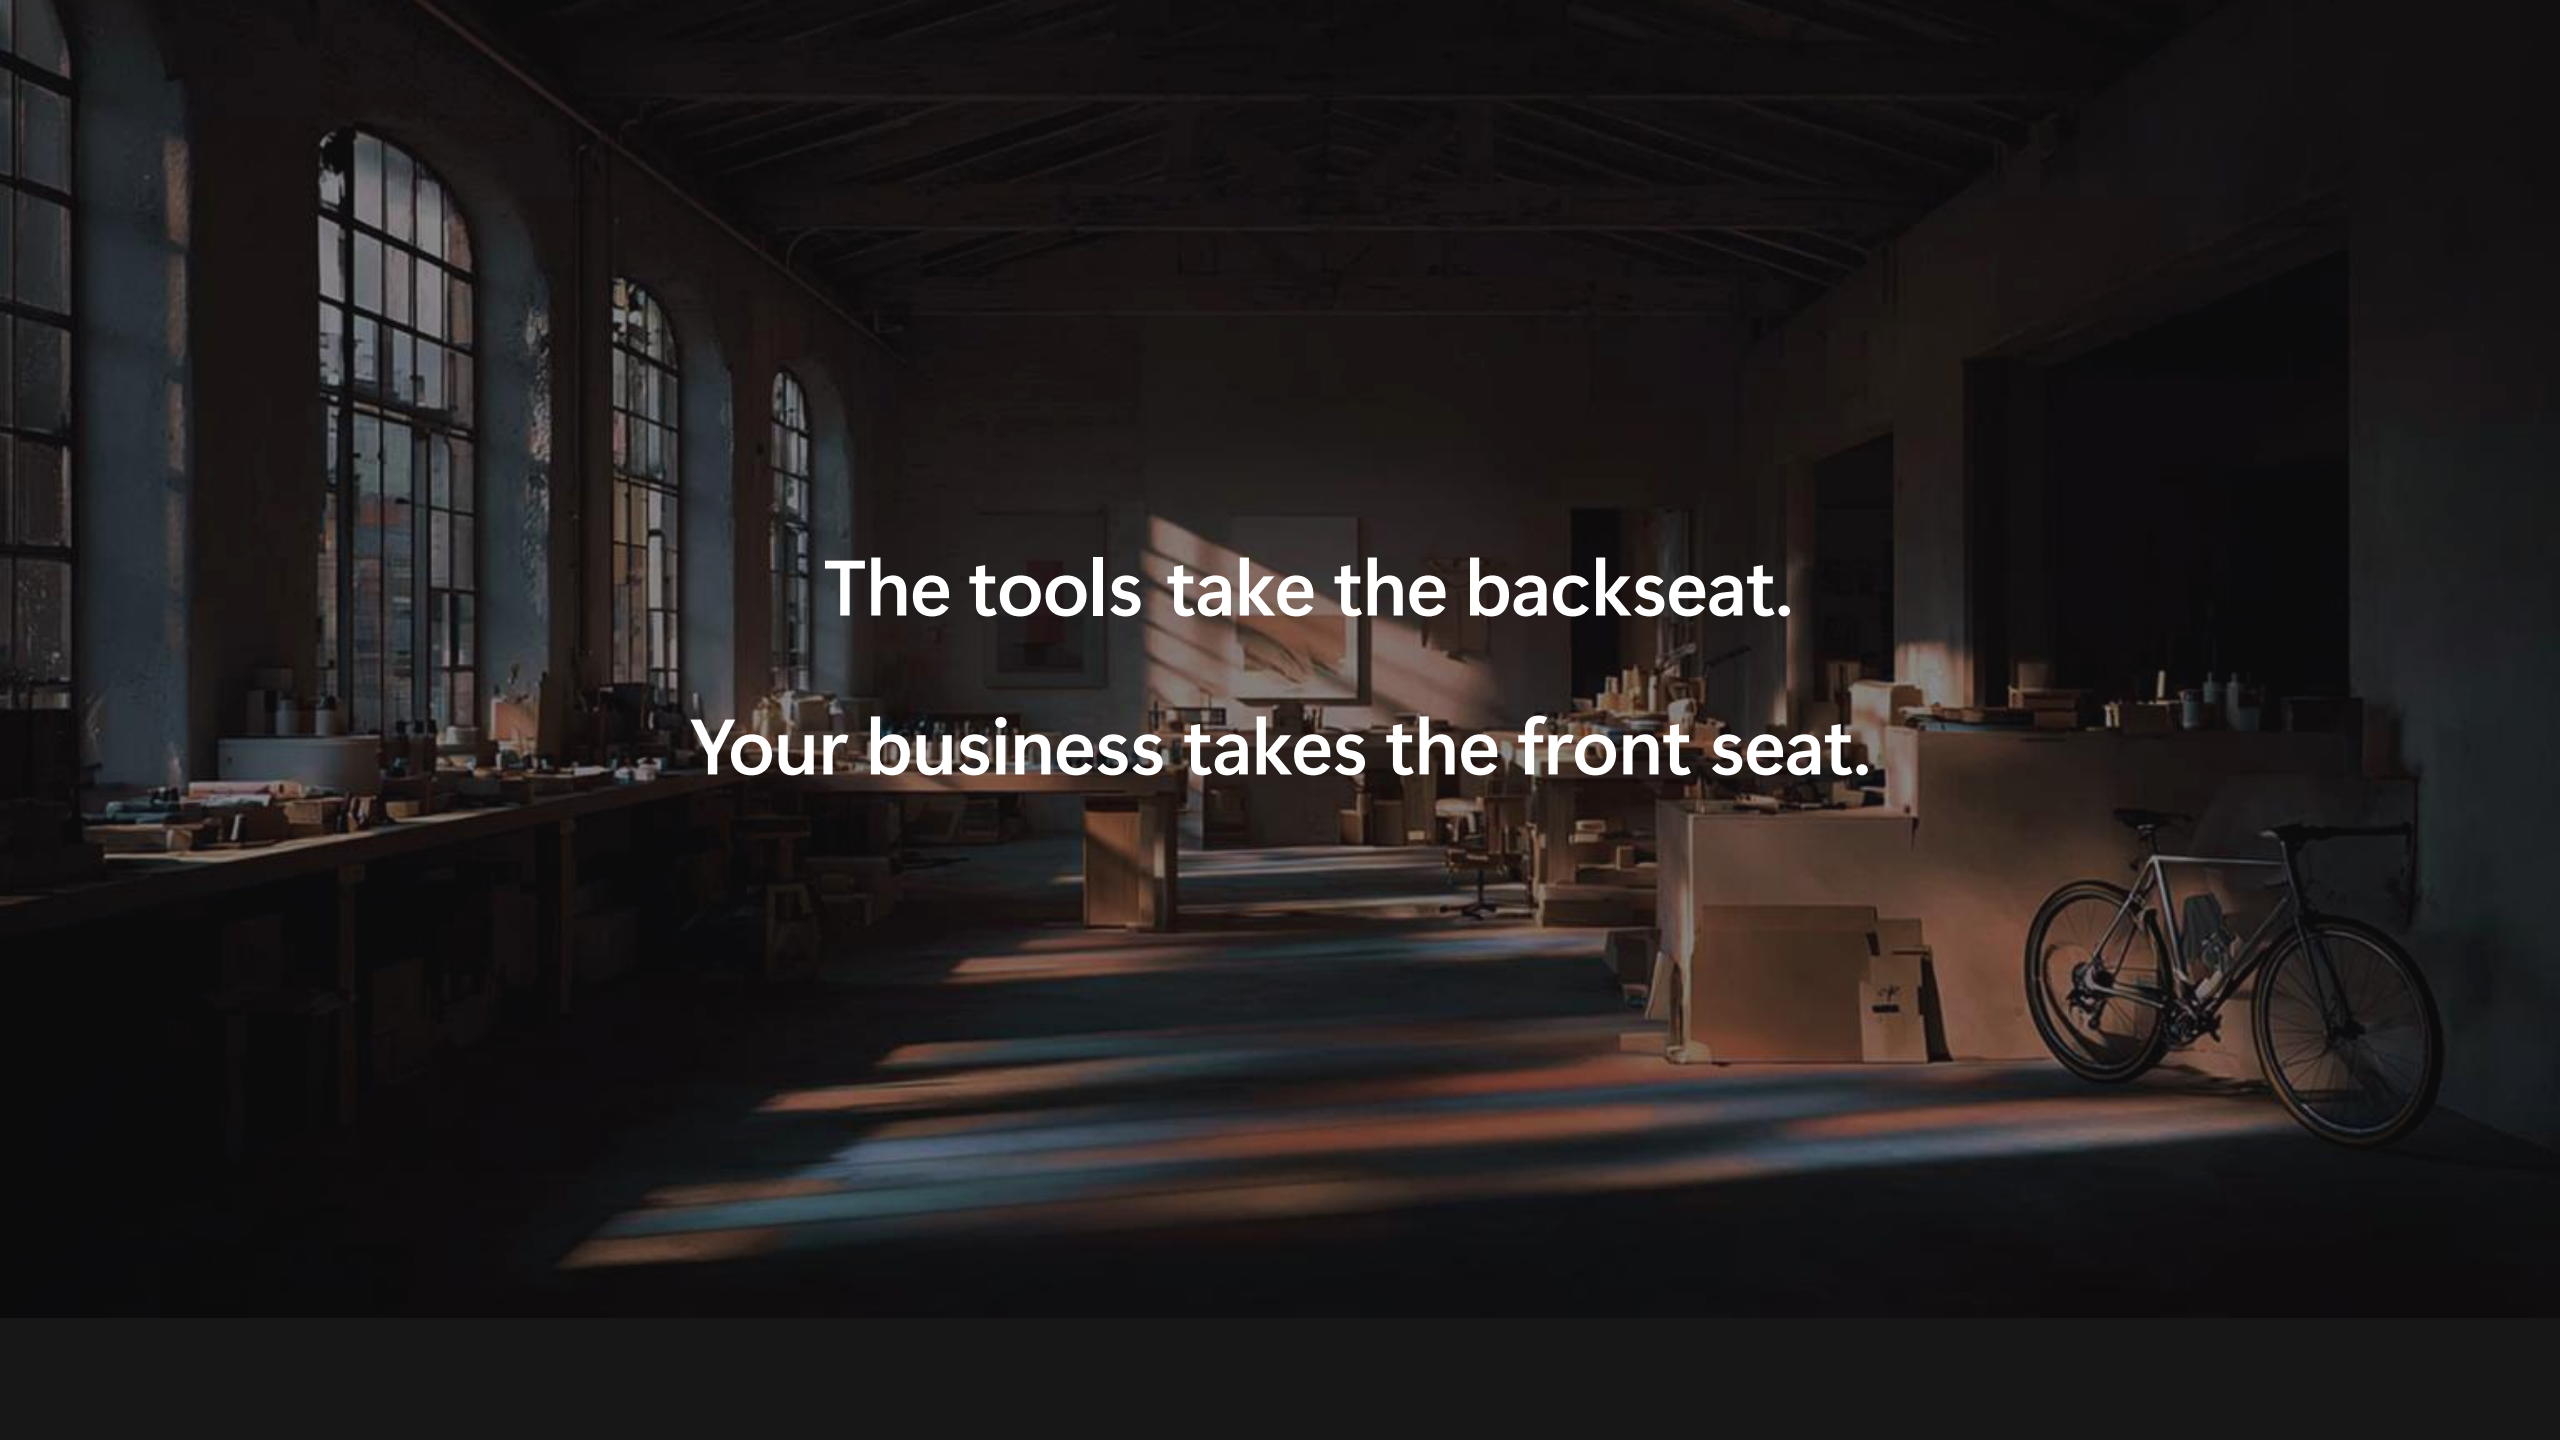

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light is streaming, creating long, dramatic shadows across the floor and workbenches. The space is filled with various tools, materials, and workbenches, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

Automation Foundations – Workflows

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

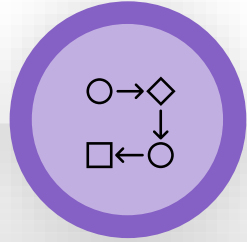

The Power Series

Lab: Automation Foundations – Workflows

- Create an automated cloud flow triggered by Dataverse events.
- Build a conditional, multi-tier approval process that respects approval outcomes.

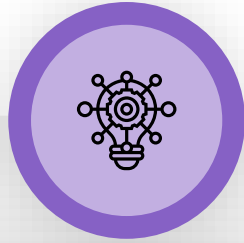

The Modern Automation Spectrum

From structured, deterministic workflows to adaptive, agentic automations

Rule-Based Automation

*Automations that follow **rigid, predetermined rules**, executing actions based on predefined triggers.*

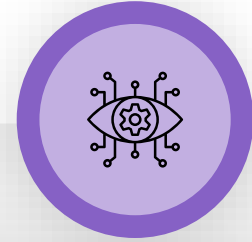

AI-Enhanced Automation

*Step-by-step automations infused with **AI-powered actions** to handle more complex scenarios and make basic decisions.*

Agentic Automation

*Automations that combine AI models with natural language understanding to **plan, reason, adapt, and orchestrate workflows***

Autonomous Agentic Automation

*Agents **autonomously interpret goals, plan tasks, and learn** from experience, with a varying level of human oversight*

Structured

Adaptive

Power Automate

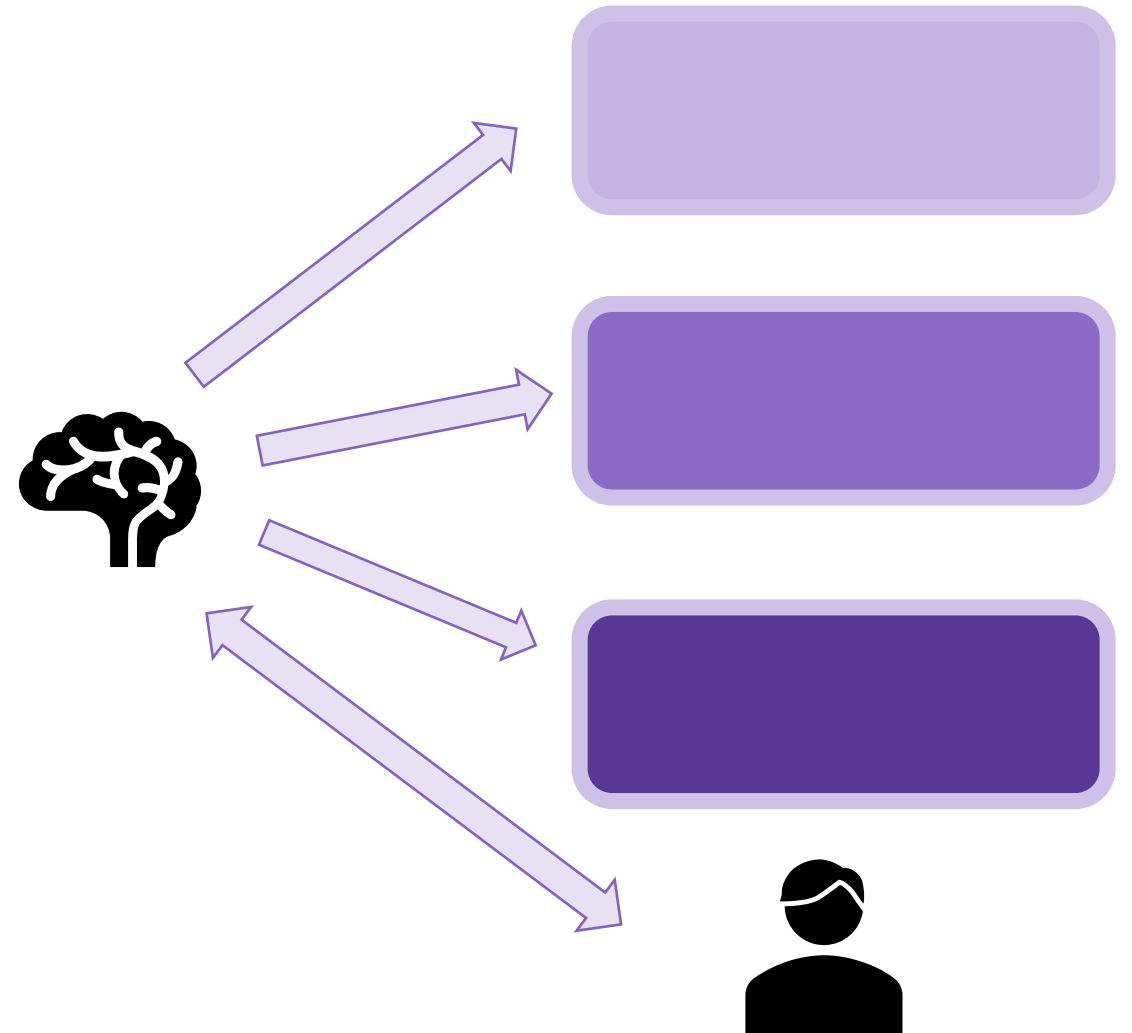

Copilot Studio

Agentic Automation

Agentic automations are:

- **Orchestrated** – they rely on instructions to coordinate multiple steps, tools, and systems using AI reasoning
- **Adaptive** – they leverage inputs and their knowledge base to select next actions
- **Human-escalating** – they use human-in-the-loop at key decision points

Agentic automations provide a layer of AI-driven reasoning that orchestrates without a fixed script

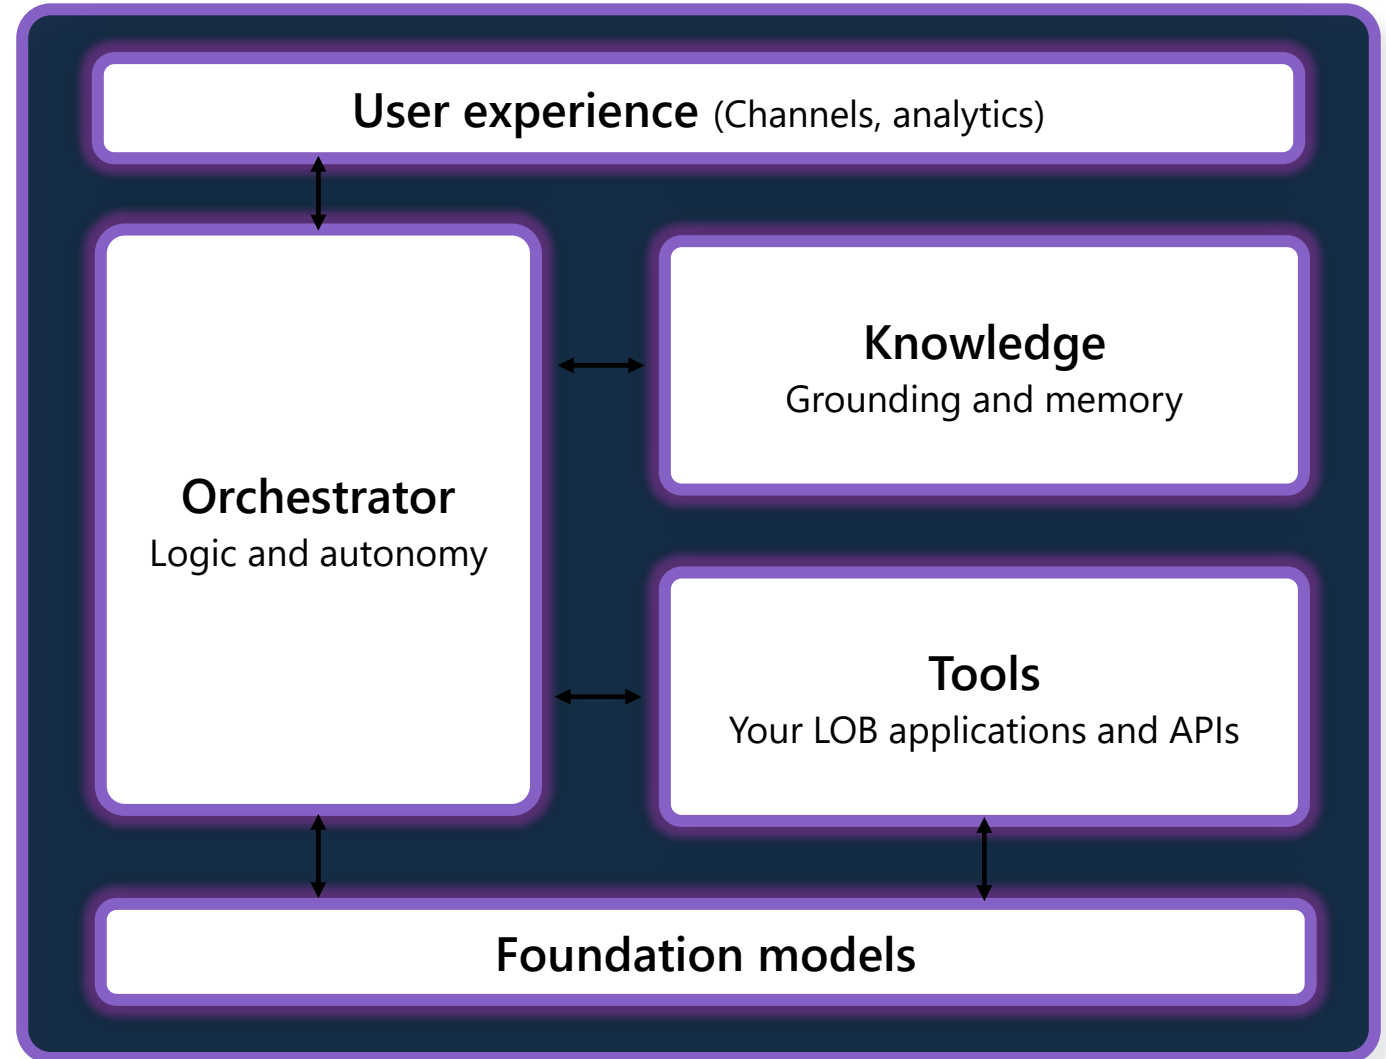

How Copilot Studio Agents Work

With Copilot Studio agents, we do not build a step-by-step workflow.

Instead, we add components – most notably **knowledge and tools** – to the agent and use natural language instructions to describe how/when the agent uses each item.

These agents can be **conversational** or **autonomous**

Agent Flows

Agent flows are **deterministic, structured workflows** you add into your Copilot Studio agents.

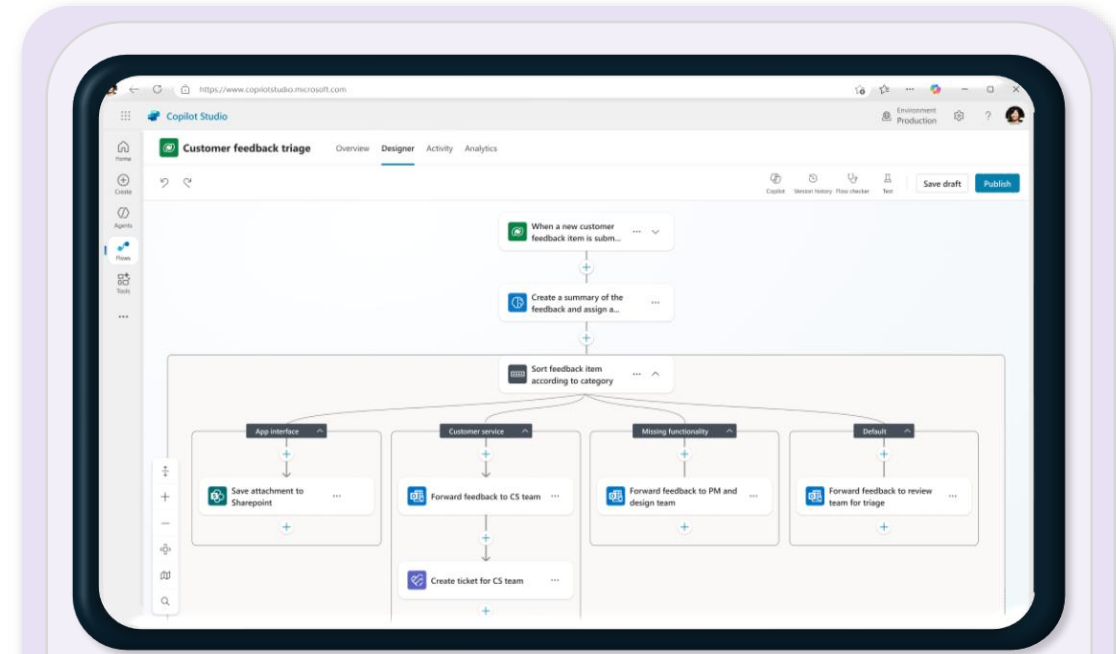

Add an agent flow to your agent when you need predictable, repetitive steps completed within a larger agentic process.

Scenario: IT Service Desk Agent

- **Agent** understands IT ticket details, helps identify the root cause, and determines resolution path (reasoning & judgment).

Once the agent decides *what* should happen, it invokes an agent flow.

- **Agent flow** executes the task, such as resetting a password, assigning a license, or updating the ITSM system (execution & control).

Agent Flows

*Call **predictable, structured automations** that run the same way each time, giving you more control over specific actions the agent could take*
