

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

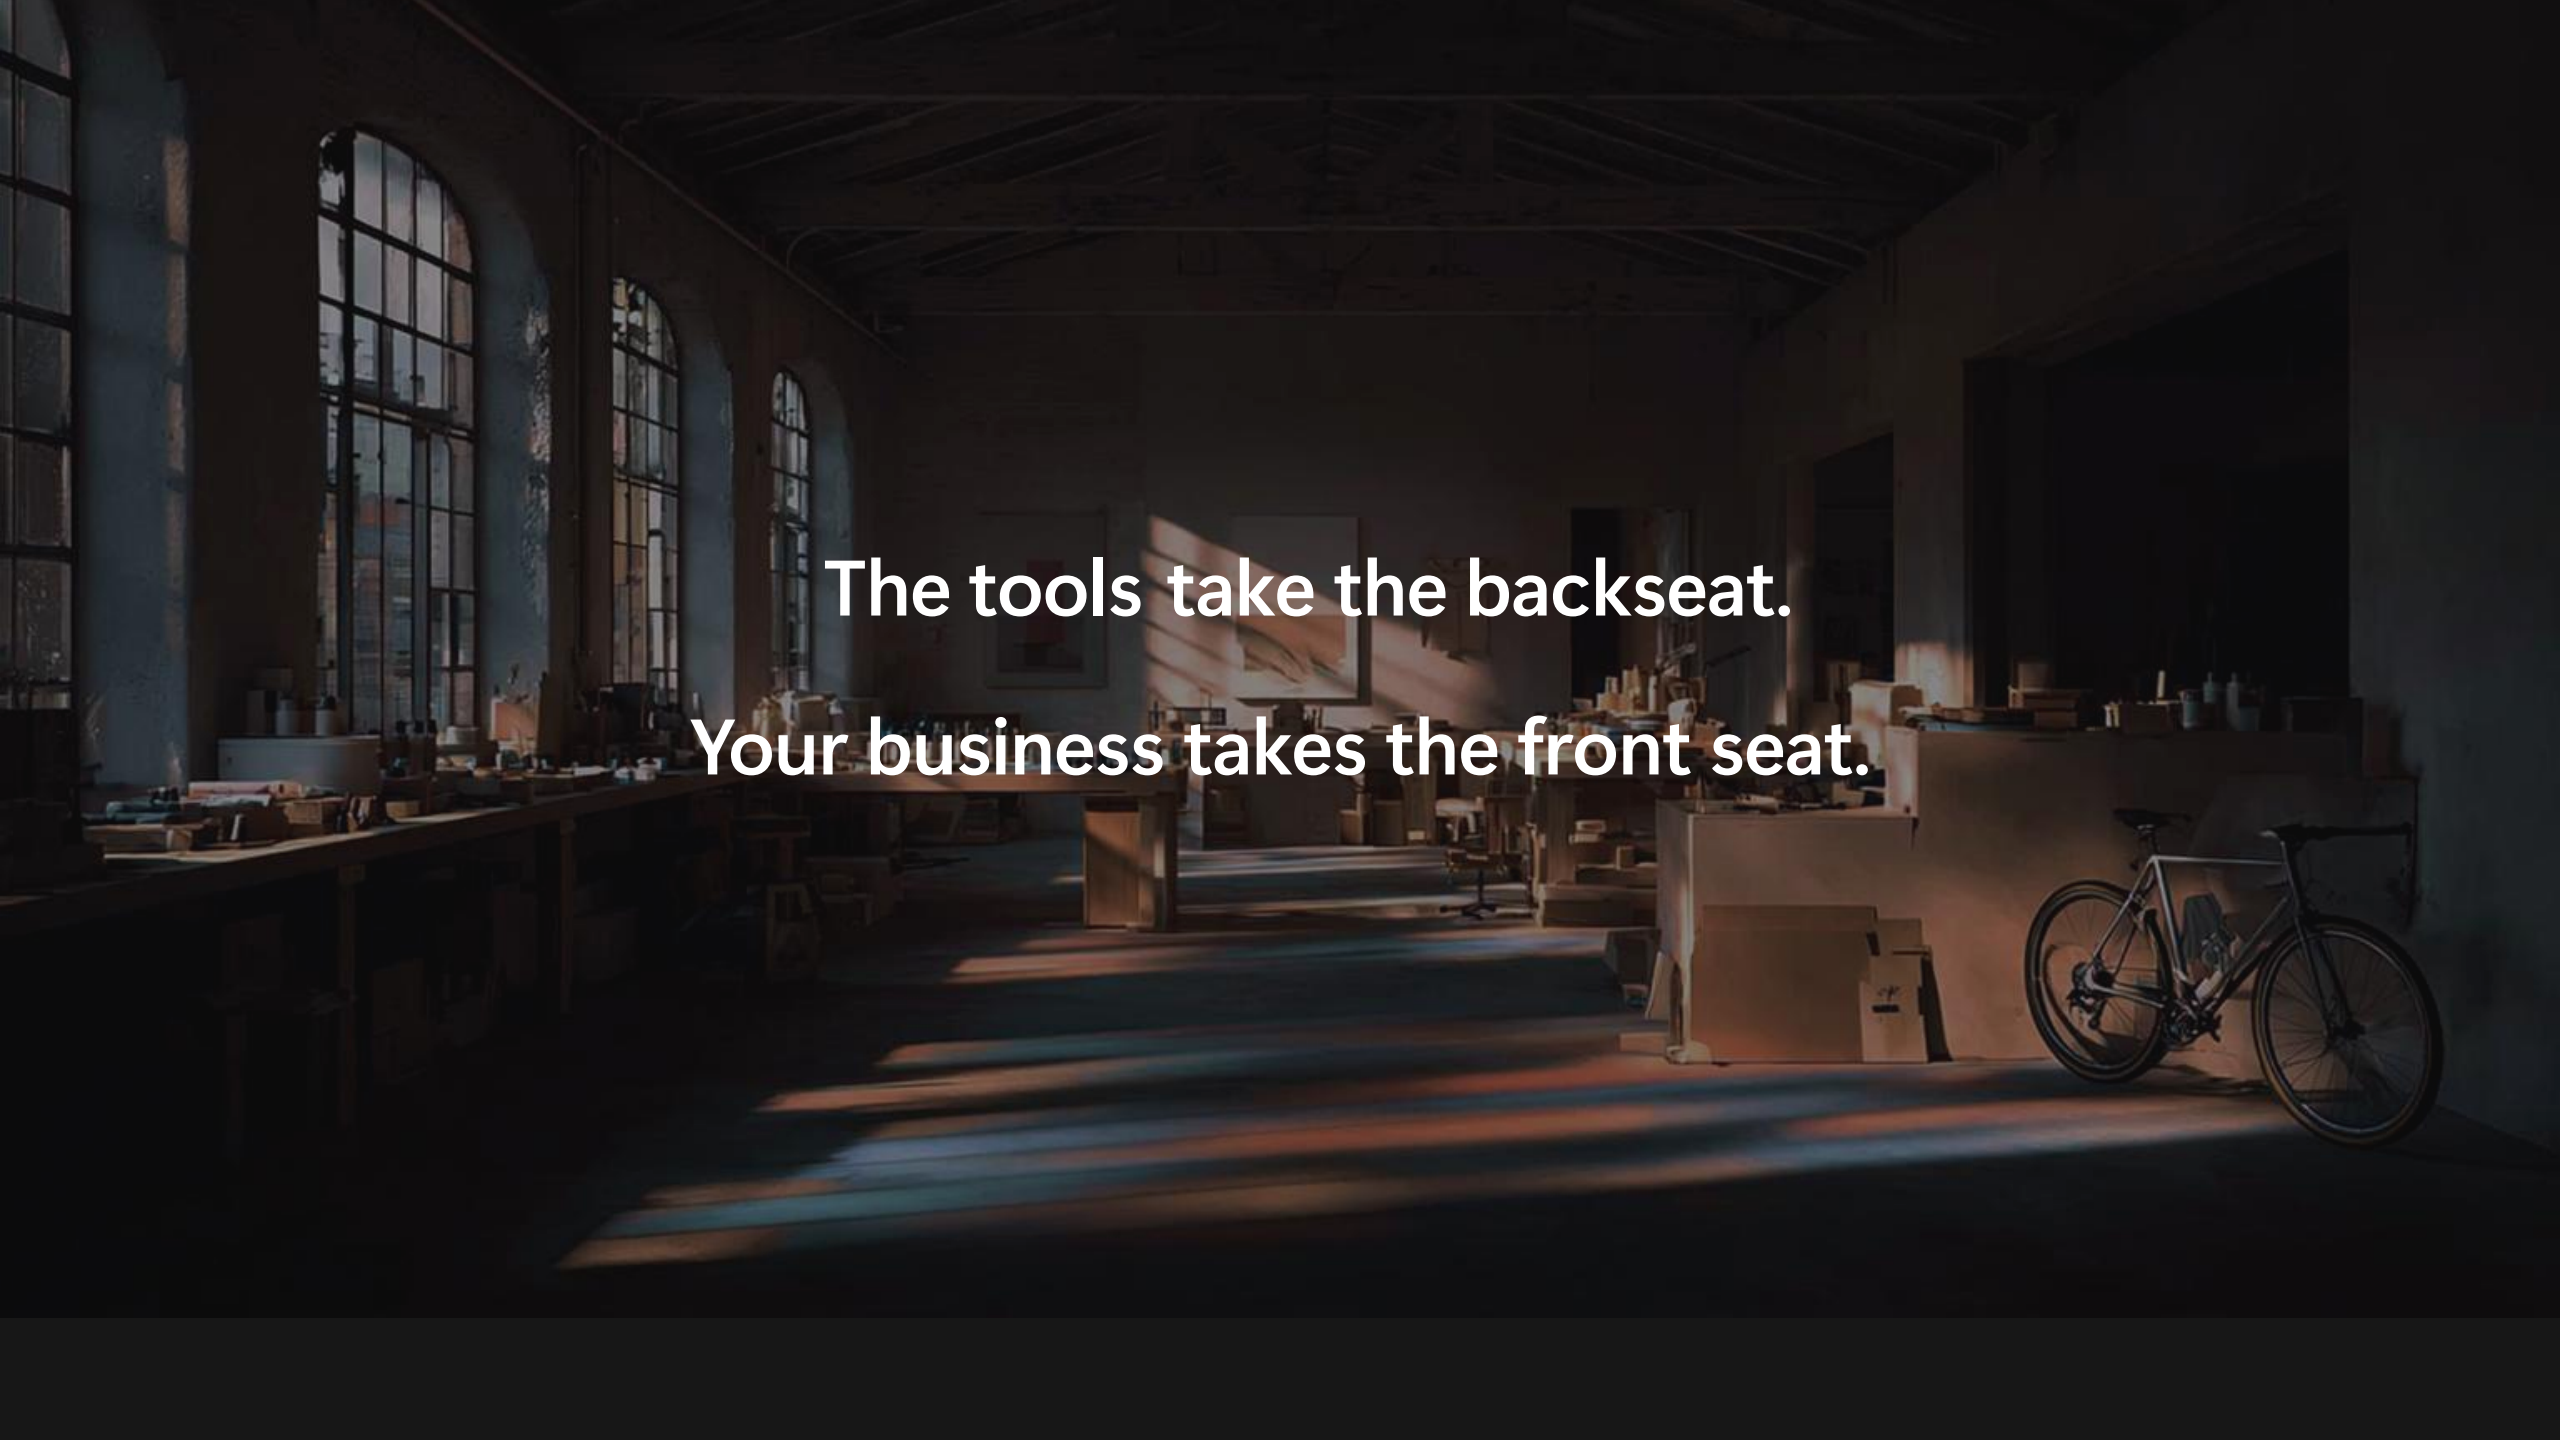

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light filters in, creating long, horizontal shadows across the floor. The space is filled with workbenches, various tools, and materials, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

Building code first apps (code apps) in Power Platform

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

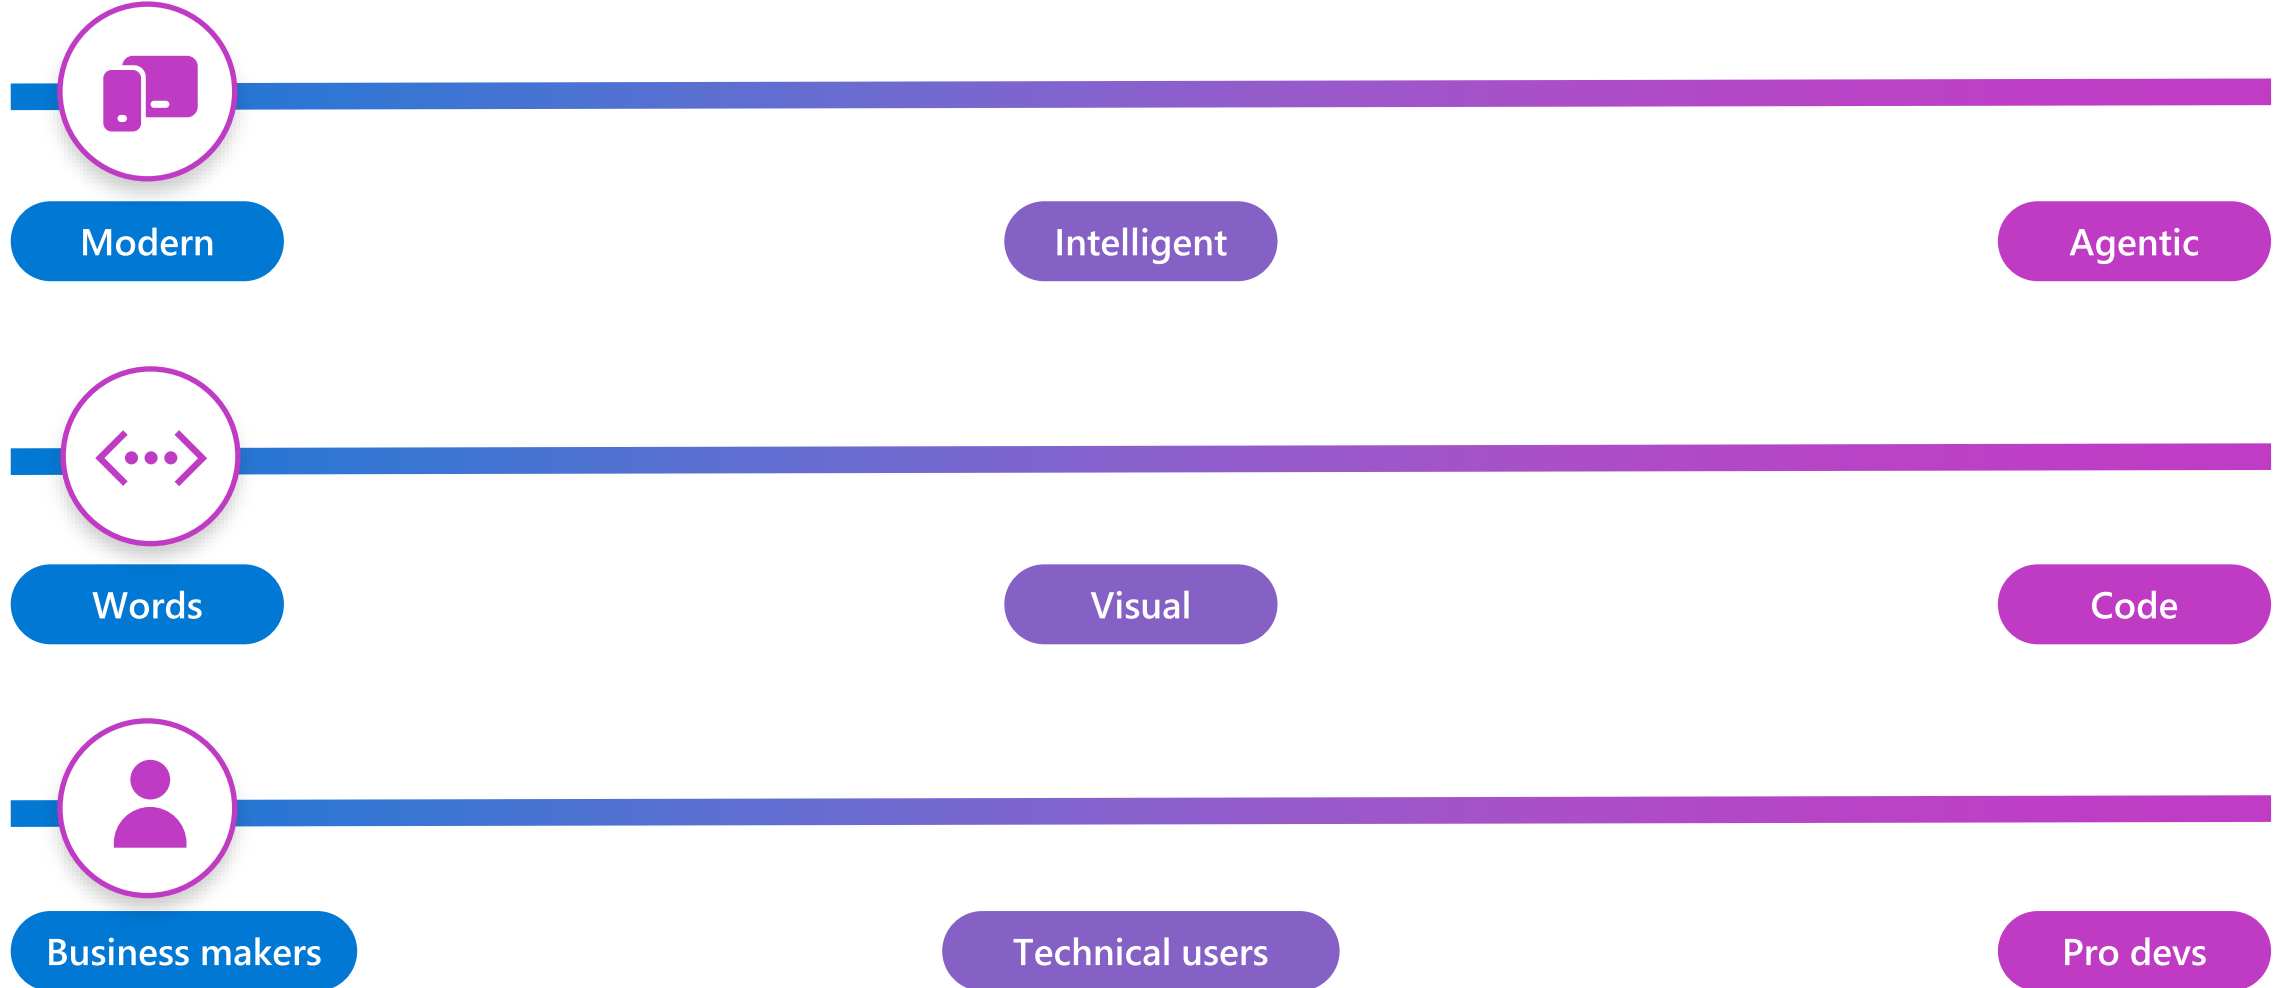

The Power Series

Lab: Building code first apps (code apps) in Power Platform

- Create a code app connected to Dataverse
- Add optional custom connectors, flows and custom agents to a code app
- Publish to Power Platform and view a code app on PowerApps.com

No matter what you build, how you build and who builds, Microsoft Power Apps is here to cover

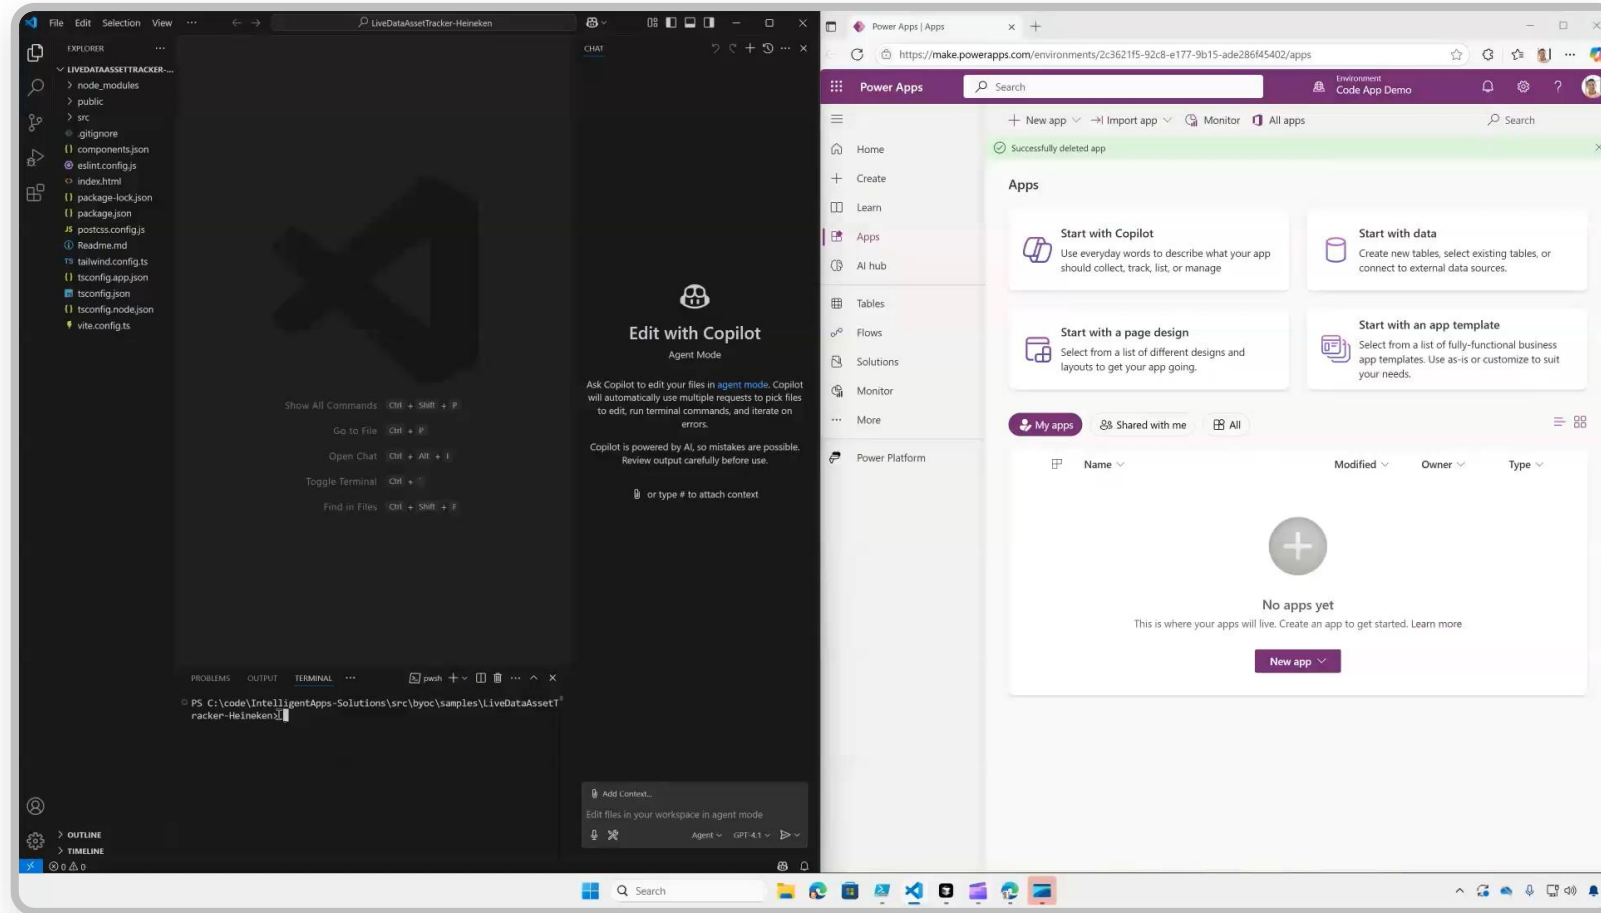

Code apps

Bring code apps to Power Platform

Leverage managed platform to safely deploy and scale apps built in React

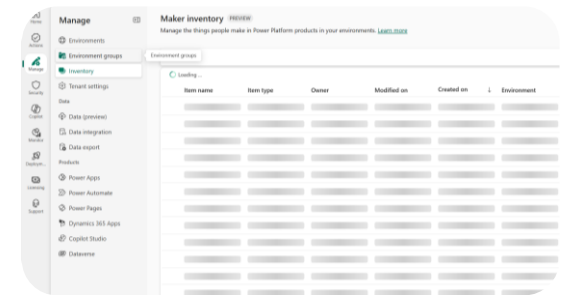

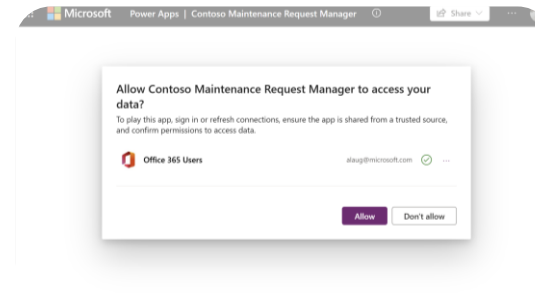

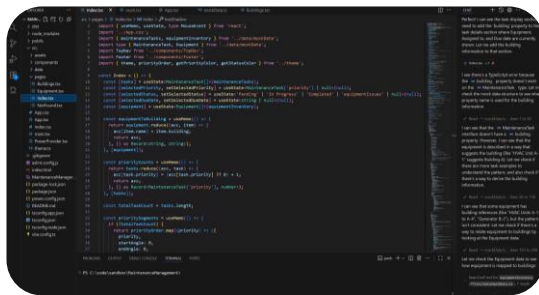

Bring your own code generated in any IDE to the connectivity, scale, and security of the Power Platform

Code apps: Simplified management

For developers

For IT

Create where
desired

Not familiar with canvas or model apps, no problem. Code apps bring Power Apps capabilities to React apps you can build in your preferred IDE.

Simple Data Access

Power Platform connectors provide a common interface to retrieve data from 1,400 data sources. Your code uses auto-generated models/services.

Enterprise ready host

an established cloud service with built in reliability, resilience, authentication and enforce IT policies.

Scale management

Like traditional Power Apps,
code apps work with the
Managed Platform
(Managed Governance,
Operations & Security. E.g.
Inventory, Conditional
Access on apps, sharing
limits, Monitor)

Development Workflow

Scaffold

Auth

Init

Develop

Deploy

```
npx degit github:
microsoft/PowerApp
s
CodeApps/templates
/
vite my-app
```

```
pac auth create
pac env select
--environment <ID>
```

```
npm install
pac code init
--displayname
"My App"
```

```
npm run dev
Open Local Play
URL in browser
```

```
npm run build |
pac code push
→ Power Platform
URL returned
```

Build once. Reuse everywhere.

Code apps combine modern user experiences with reusable code, with the added benefit of Power Platform data, security, and governance.

Business scenario: Customer or partner portal

A company needs a highly tailored portal experience with custom interactions and branding.

- Developers use familiar frameworks to build a polished, fit-for-purpose experience.
- Reusable components, integrations, and code assets can be shared across apps and teams.
- The app connects to governed Power Platform data, security, and processes.
- Future apps build on the same foundation instead of starting from scratch.

Impact: faster delivery, lower development cost, consistent experiences, and greater return on existing developer skills.

Code apps let you build the right experience once and scale it across the business.
