

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

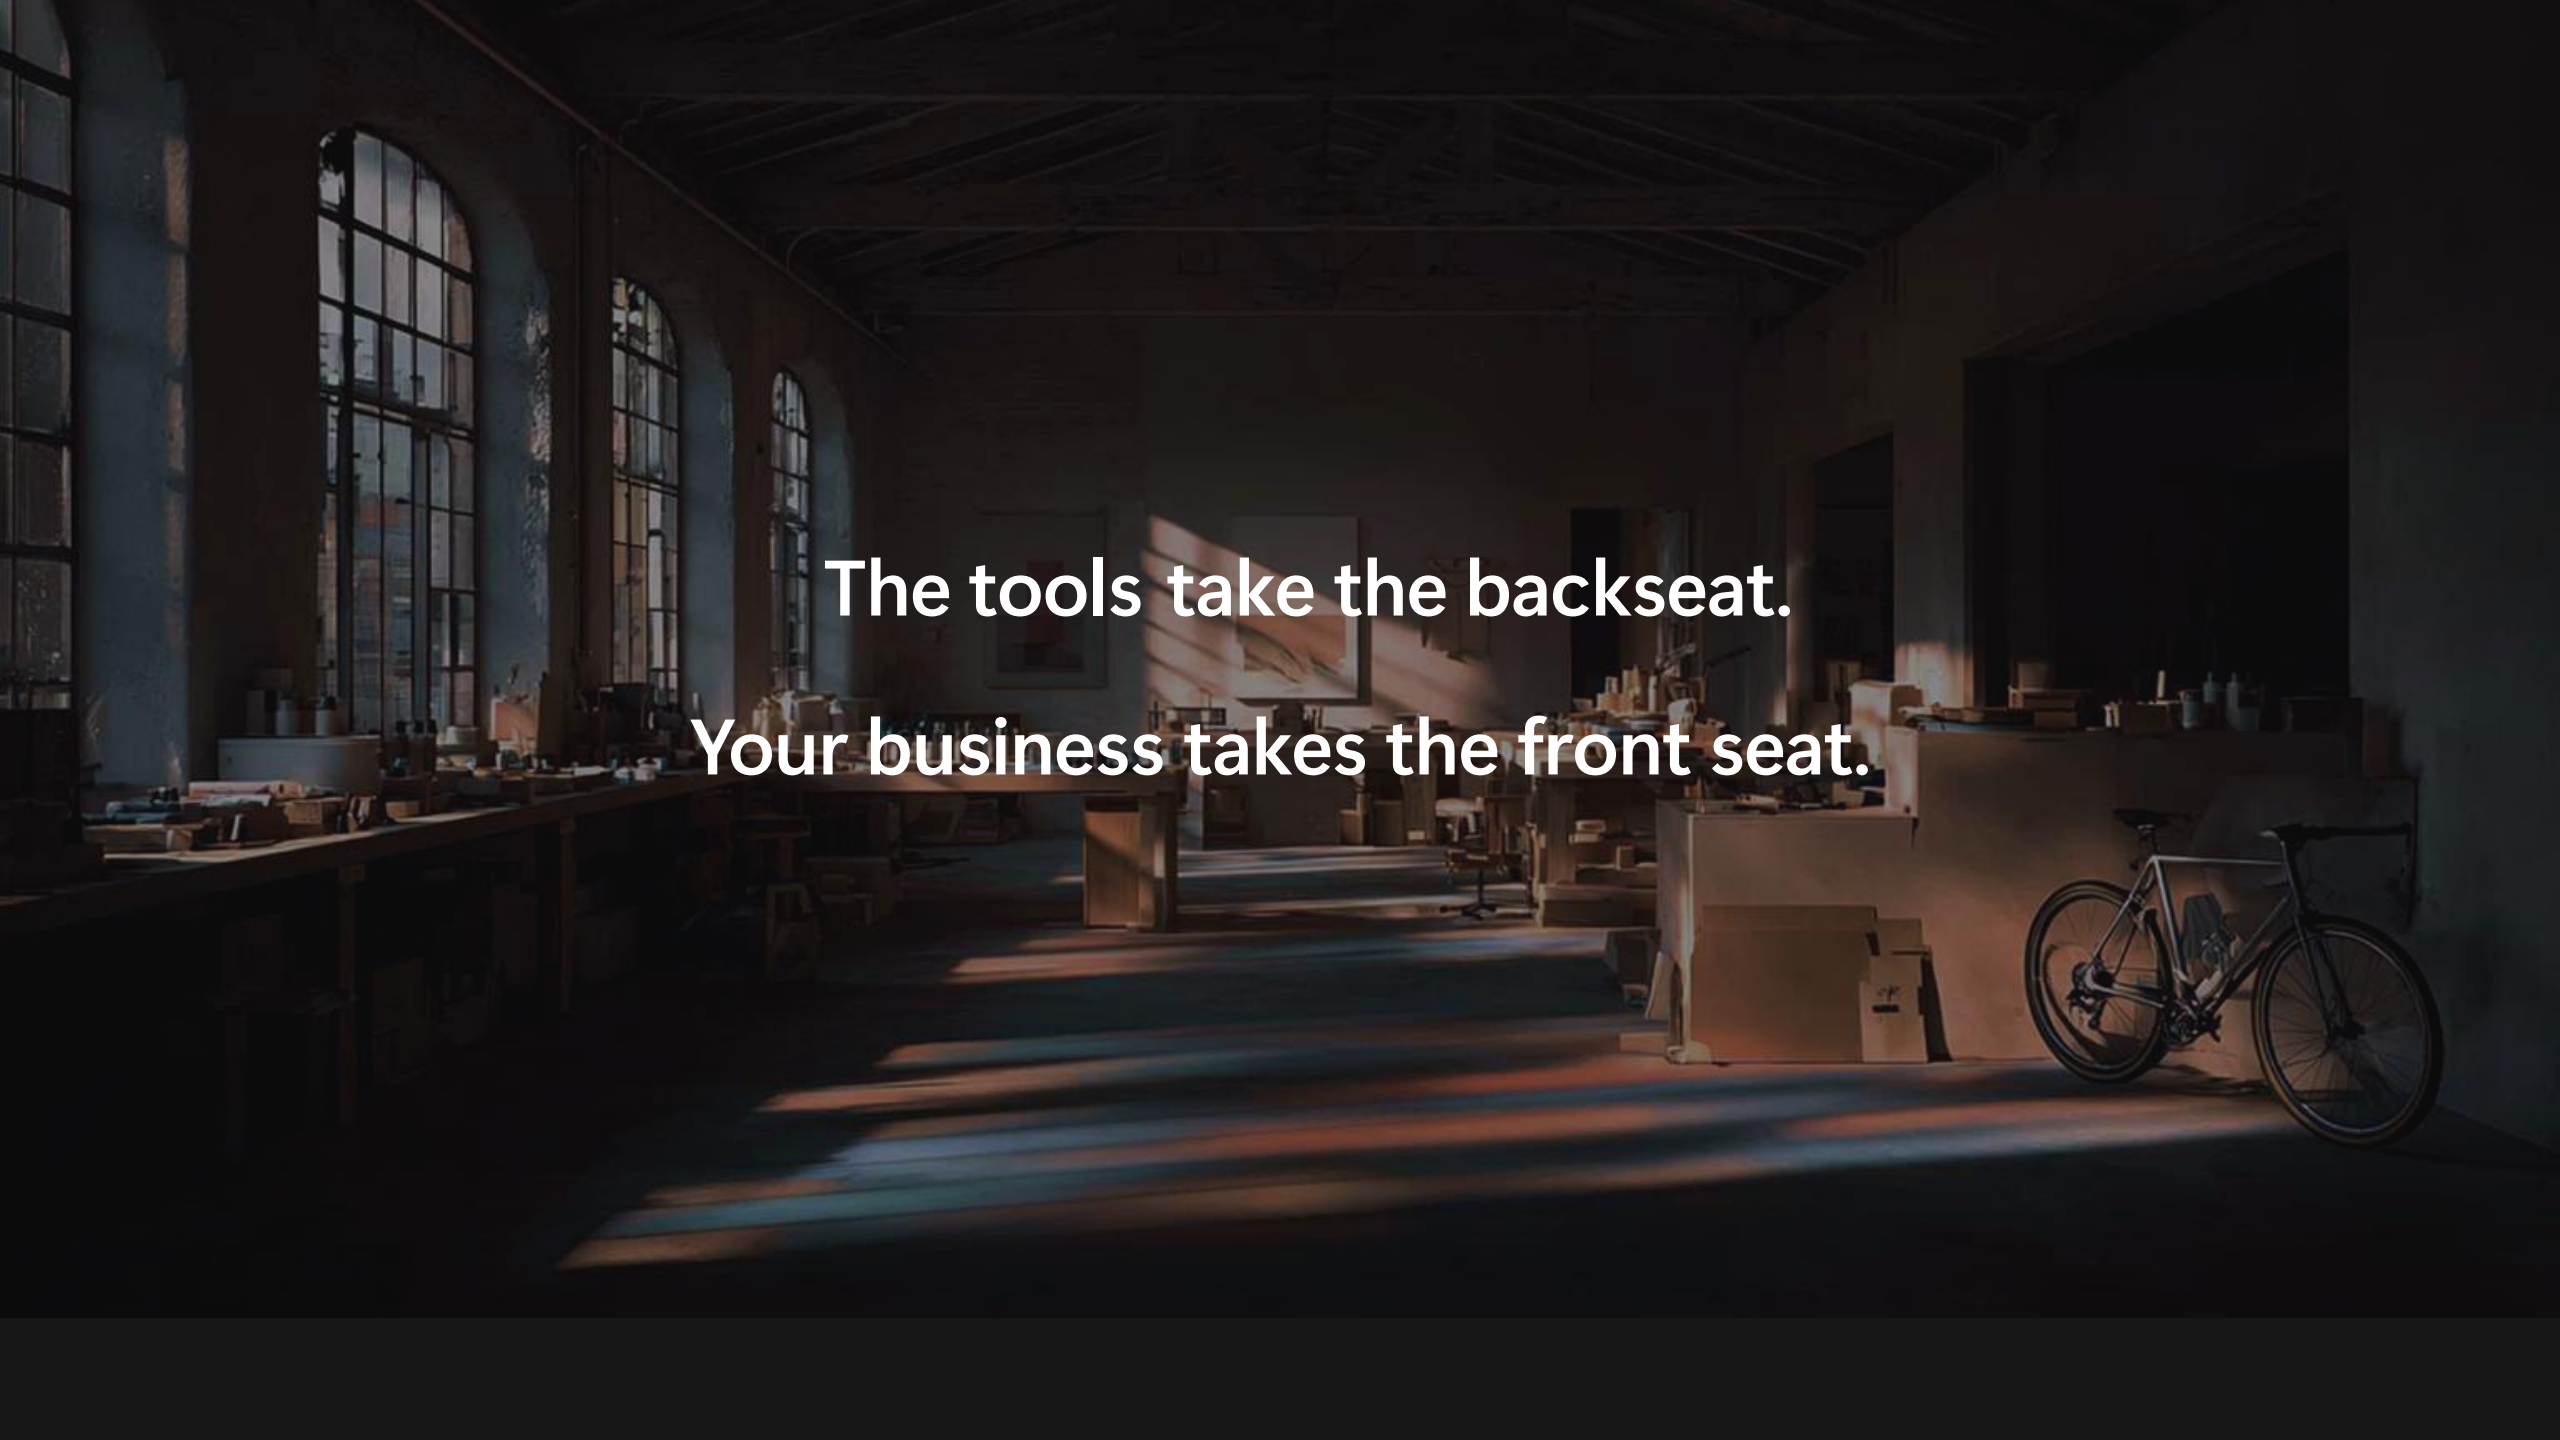

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light is streaming, creating long, dramatic shadows across the floor and workbenches. The space is filled with various tools, materials, and workbenches, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

Power Series Labs

Building code first website with Power Pages

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

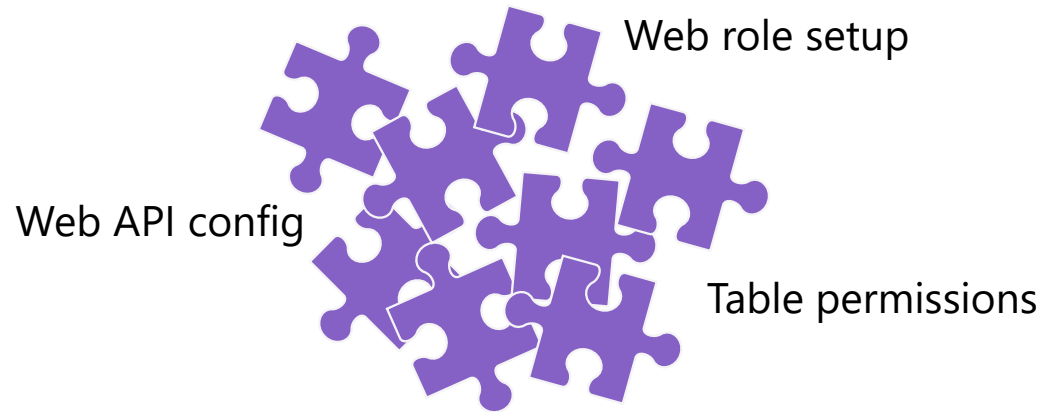

The Power Series

Lab: Building code first website with Power Pages

- Generate a simple website and wire it to Dataverse
- Use the Power Pages Web API to capture requests securely

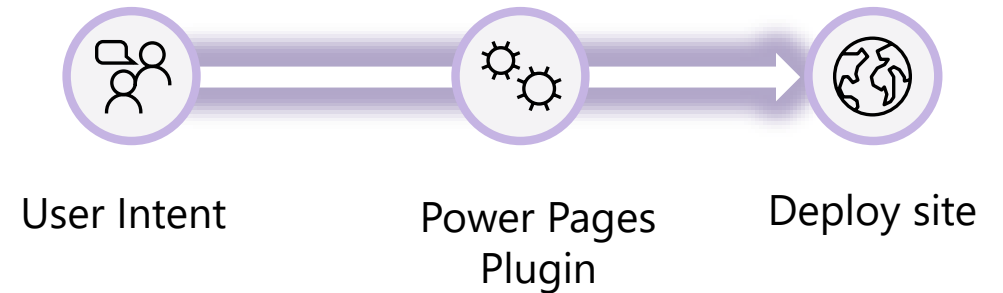

From Manual Implementation to Orchestration

The Traditional Challenge

Building a secure SPA on Dataverse requires heavy setup configuring authentication contexts, manually defining Web API schemas, and adding web roles/table permissions.

The AI Solution

The Power Pages plugin abstracts the plumbing. Use natural language to scaffold projects, design schemas, and configure security, focusing only on the experience.

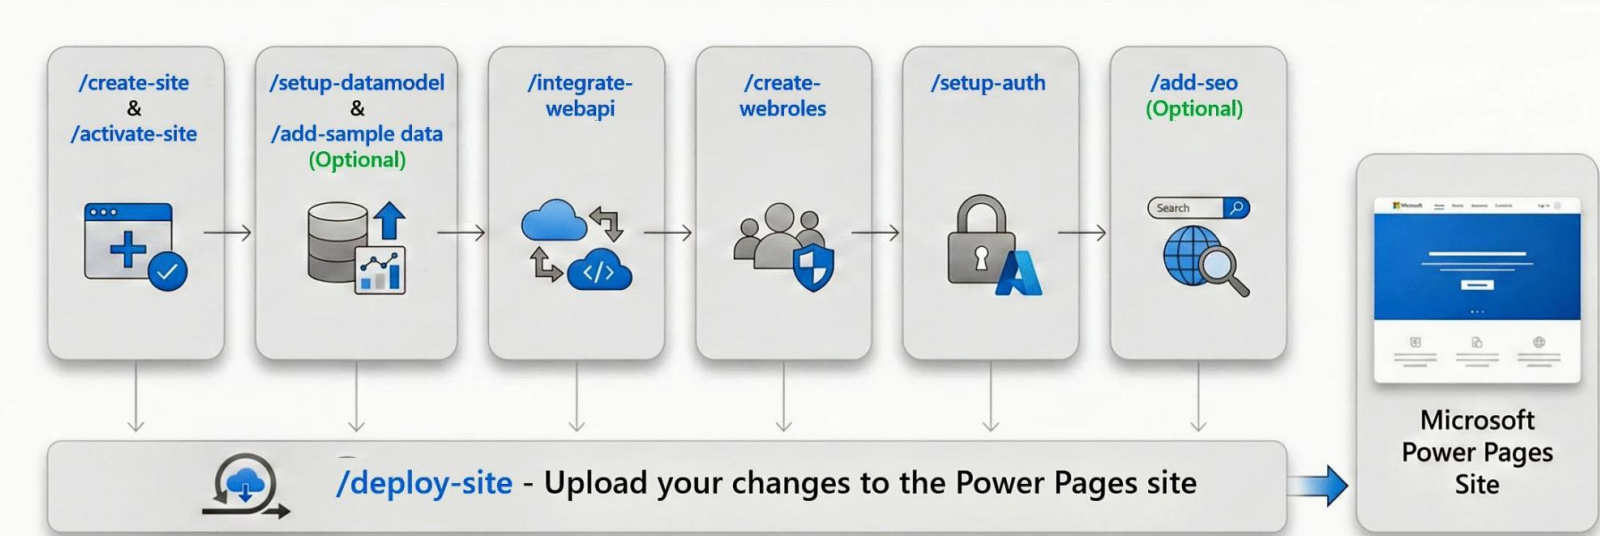

The Power Pages Plugin

A conversational interface within Claude Code to create, configure, and deploy Single-Page Applications (SPAs).

The Power Pages plugin provides skills to guide you through creating a complete site from start to finish.

FLEXIBLE EXECUTION

Each skill runs independently - invoke as slash commands or just describe what you want in natural language

Skill	Command	What It Does
Create Site	/create-site	Scaffold site with design direction and framework choice
Deploy Site	/deploy-site	Build and upload to Power Pages via PAC CLI
Activate Site	/activate-site	Provision website record and public URL
Set Up Data Model	/setup-datamodel	Create Dataverse tables, columns, relationships
Add Sample Data	/add-sample-data	Populate tables with realistic test records
Integrate Web API	/integrate-webapi	Generate typed API client, services, permissions
Create Web Roles	/create-webroles	Define anonymous and authenticated roles
Set Up Auth	/setup-auth	Entra ID sign-in/sign-out + role-based access
Add SEO	/add-seo	Generate robots.txt, sitemap.xml, and meta tags

Power Pages Plugin for Agentic Coding

Agent Driven
Code-First
Intelligent AI

Build and deploy production-ready
Power Pages sites with agentic AI
coding tools

&

*Automate business
logic and external API
calls on Server Logic*

+

*Add Copilot Studio
agents to your site
with prompts*

+

*Security Skills - Improved
Authentication,
Authorization, Site
Settings*

Build tailored portals faster with governed data

Bring your own code to Power Pages to create tailored web experiences, connect them securely to Dataverse, and accelerate delivery with AI-assisted development.

Business scenario: Supplier onboarding

A company needs a supplier portal where vendors can submit onboarding applications.

- Developers use familiar tools such as VS Code, Git, and GitHub Copilot.
- Suppliers complete a simple, mobile-friendly online form.
- Submissions are securely captured in Dataverse for internal review.
- The approach can be reused for other partner and customer-facing portals.

Impact: faster portal delivery, less duplicated development, secure data capture, and greater reuse of existing developer skills and code.
