

The power of the platform

Empower **everyone** who needs to create
business software.

Your solutions,
your way
Now, **augmented**

**All deployed on
an enterprise
ready platform.**

**Managed
security**

Advanced
protection for an
AI-driven world

**Managed
governance**

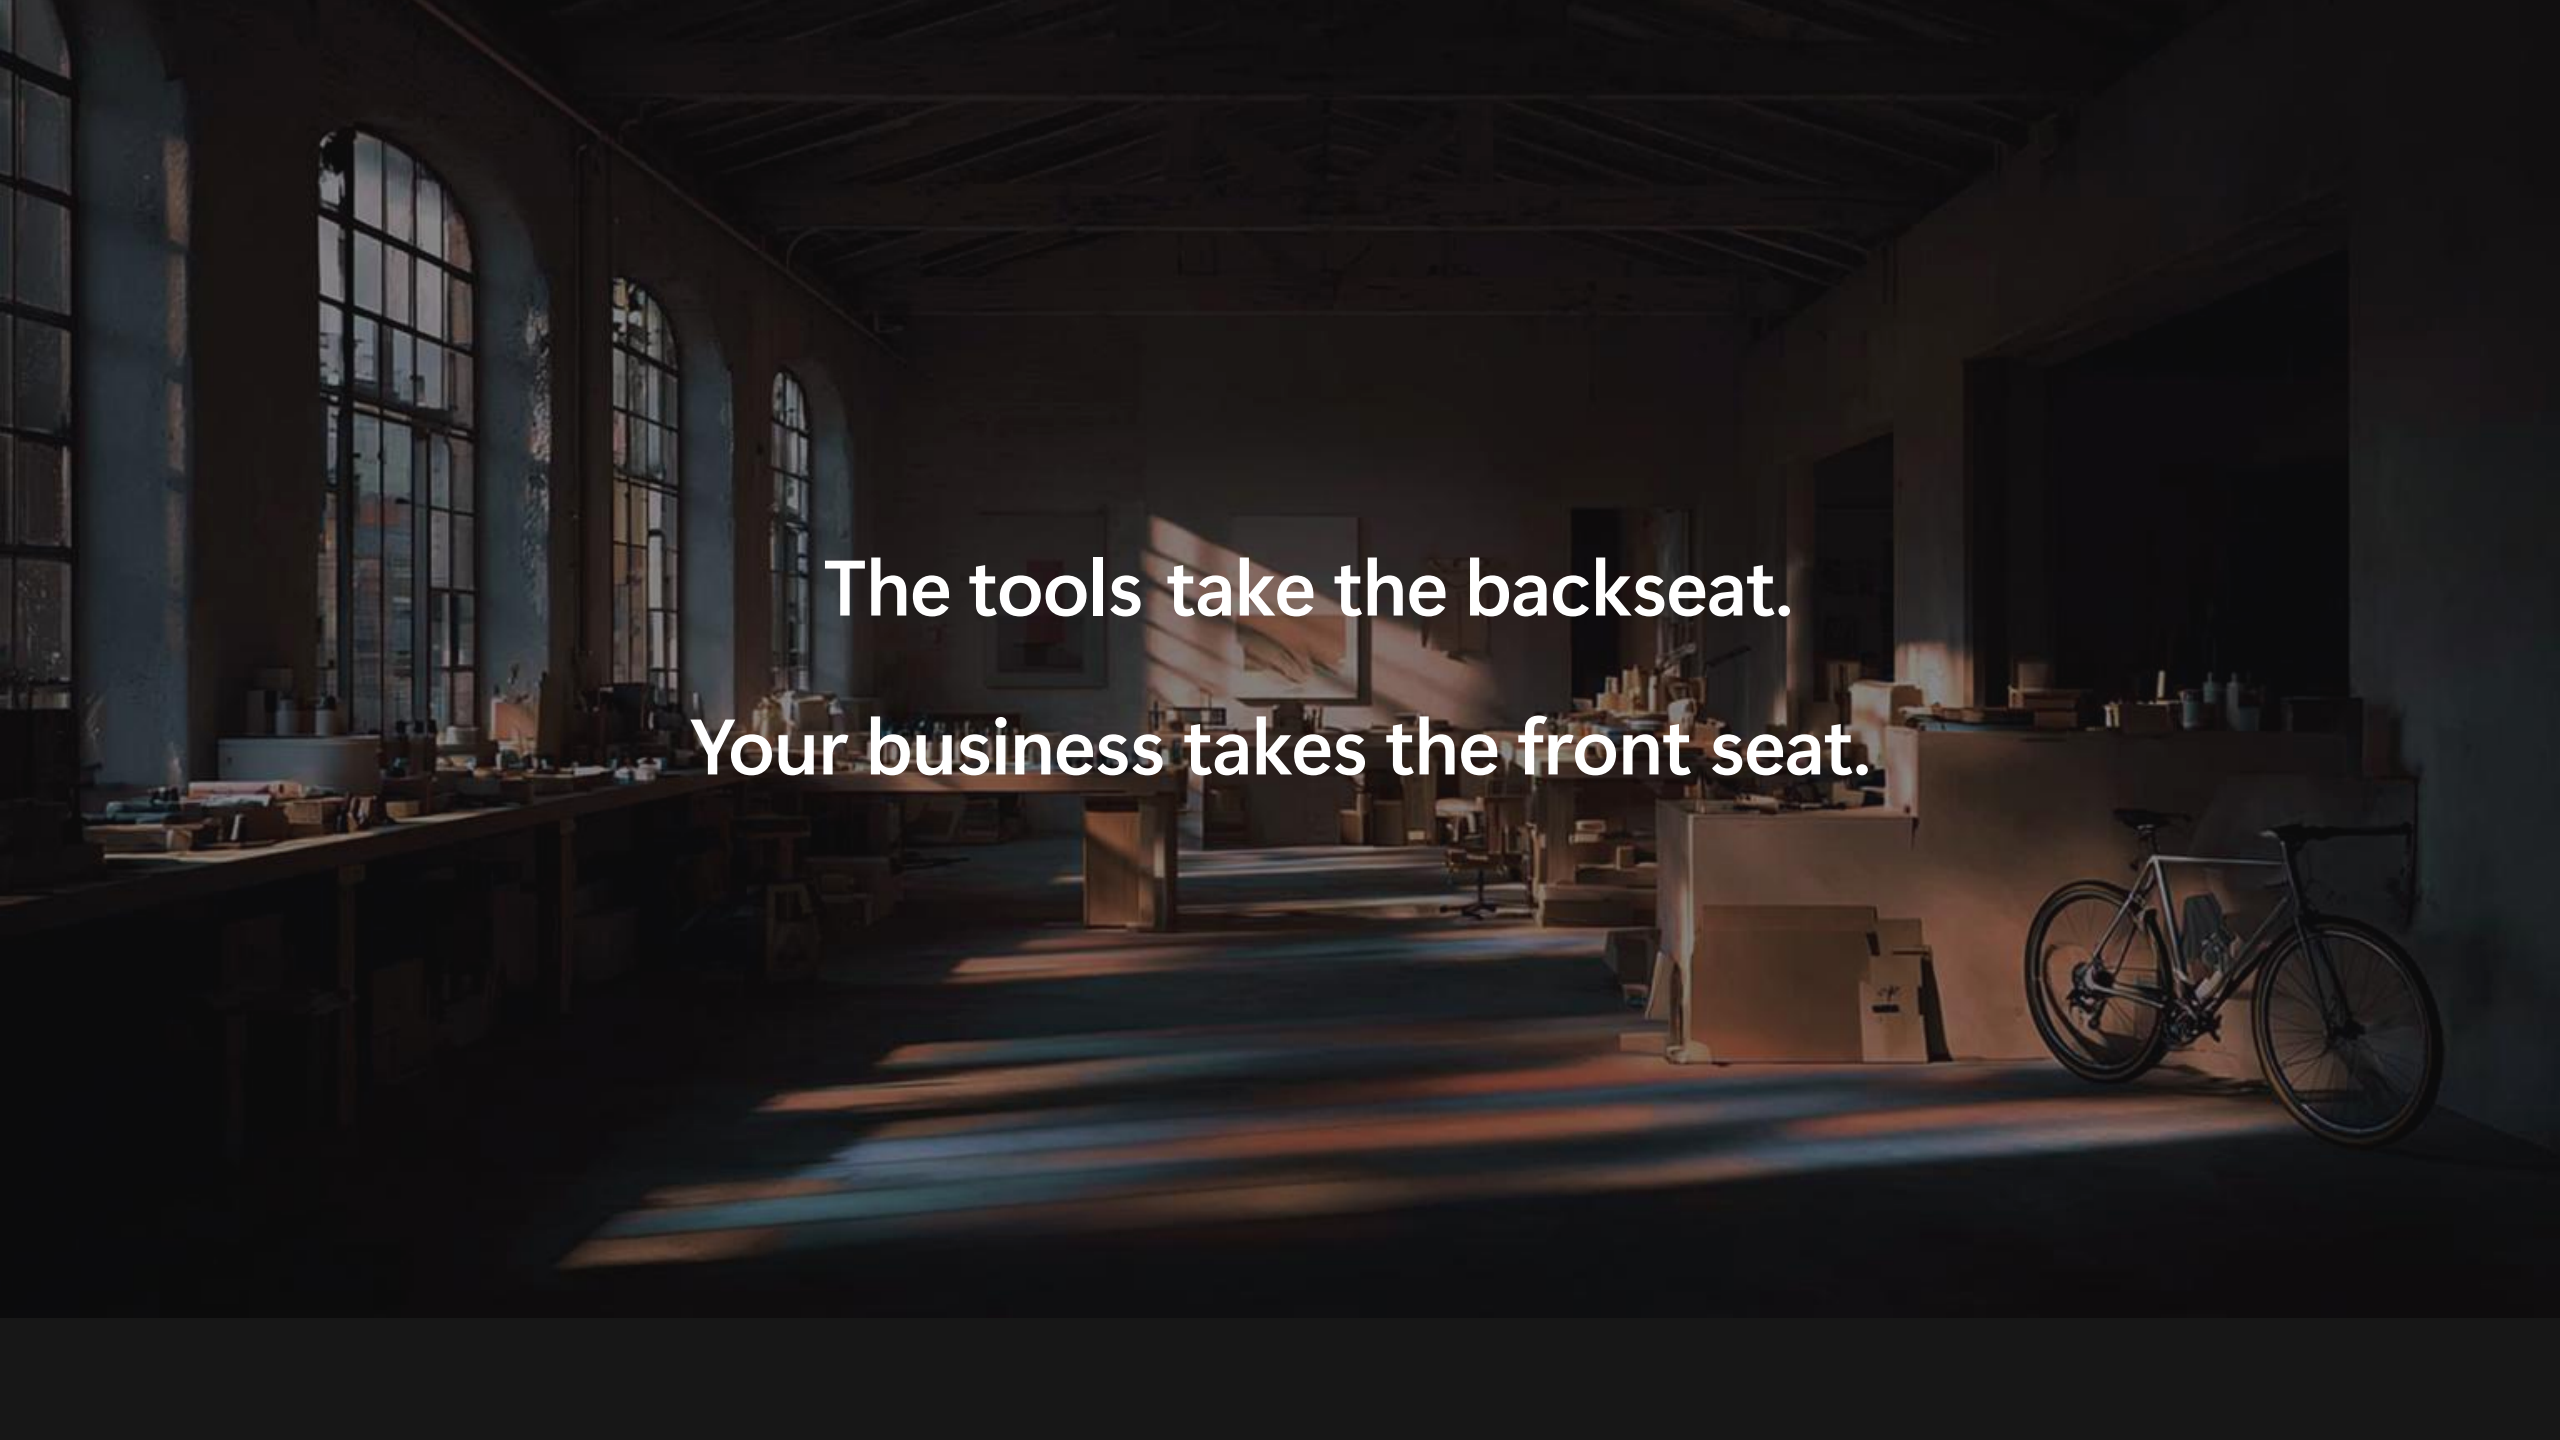

More visibility,
more control,
less effort

**Managed
operations**

Operational
excellence for
agents at scale

**Managed
availability**

Enterprise-grade
reliability for mission
critical workloads

A dark, atmospheric photograph of a workshop or studio. The room features large, arched windows on the left side, through which light is streaming, creating long, dramatic shadows across the floor and workbenches. The space is filled with various tools, materials, and workbenches, suggesting a creative or industrial environment. A bicycle is parked on the right side of the frame. The overall mood is quiet and focused.

The tools take the backseat.
Your business takes the front seat.

The Power Series

One Catalog. Five Tracks. Endless Possibilities.

Let your business need shape the solution.

The Power Series gets you hands-on with every Power Platform capability, so you design the right solution for any business process – one or more apps, automations and agents, working together on a governed foundation. Run a track end to end, or pick the modules that fit your scenario, audience and skill level.

Digitize Internal Operations

Replace manual work with focused apps and connected data

Automate workflows and processes

Reduce repetitive work with automation, approvals, and AI

Improve customer interactions

Create secure experiences for customers, partners and communities

Modernize existing applications

Evolve legacy solutions with modern apps, automation, and AI

Strengthen governance and security

Apply guardrails, visibility, and control across the platform

Build your business-aware agents more easily

Configurable and reusable **business skill** to define your business workflow, that can adapt to your needs, stored in **Dataverse**

Business skills

Reusable business logic and processes for grounded enterprise agents

- Defines how your organization works: business workflows and processes
- Skill = Name + Description + Business Process Instruction + Resources
- Shared business context across agents for your organization
- Role based access control (RBAC) compatible
- Use Dataverse MCP Server endpoint or Maker portal to author business skills

assign-vendor-to-project-issues

Unique name ⓘ
new_assign-vendor-to-project-issues

Description

Assigns vendors to project issues by specialty (Plumbing/Electrical/HVAC) and rating. Finds unassigned issues, matches to best vendor, updates issue, and creates project note. Use for "assign vendor", "match vendor to issue", or "auto-assign vendors".

Instructions

Edit markdown Preview

When project issues arise, this skill automatically identifies the most qualified vendor based on issue specialty type and vendor ratings. It ensures issues are assigned to active, highly-rated vendors with the relevant expertise.

Instructions

Step 1: Find Unassigned Issues
Look in the ****Issue**** table for any active issues that don't have a servicing vendor assigned yet. If all issues already have vendors, let the user know.

Step 2: Detect Issue Specialty Type
For each unassigned issue, read the issue name and description to figure out what type of specialty is needed:

- ****Plumbing**** - Look for words like: plumbing, pipe, water, leak, drain, faucet, toilet, sewer
- ****Electrical**** - Look for words like: electrical, electric, power, panel, wiring, circuit, breaker, voltage
- ****HVAC**** - Look for words like: hvac, heating, cooling, air conditioning, ventilation, furnace, thermostat

Resources

+ Add Files

Add files or code snippets that will be referenced by the skill. For example: policy documents, SOP's, templates or forms, calculations, etc.

+ Add Files

Standardize AI decisions with Dataverse business knowledge

Dataverse Business Skills capture your operating rules once, so every AI agent follows the same approved process across teams and tools.

Business scenario: Retail operations consistency

A retailer uses AI in customer support, developer workflows, and automation, but each agent answers differently.

- Document discount, reorder, and return policies as reusable business skills.
- Make skills discoverable across Copilot Studio, VS Code, and other agent surfaces.
- Update policy once and apply the change everywhere.
- Share and govern skills with role-based access and solution-based ALM.

Impact: consistent outcomes, lower policy risk, faster process updates, and scalable AI governance.
