

Bring AI Inside Your App: Natural Language Queries, Auto Charts & Smart Form Fill

Power CAT

Power CAT | The Intelligent Enterprise - Power Platform & AI for Frontier Firms

In-app agents

Lab overview

This lab shows how to use in-app agents in a model-driven app to explore data, generate visuals, assist with form completion, and surface record summaries directly in the user workflow.

App scenario

Northwind Traders wants end users to work faster inside the Admin Management model-driven app without relying on separate analytics or manual data-entry workflows. In-app agents help users query orders, visualize trends, complete forms from unstructured content, and review AI-generated summaries directly in the app experience.

Prerequisites

Review the consolidated workshop prerequisites before you begin:

- [Workshop prerequisites](#)

For this hands-on lab, use a dedicated Power Apps developer environment. Import the **Northwind Traders** unmanaged solution from the `solutions` folder and seed the sample data by following the instructions in the [solutions README](#).

[!NOTE] Use the shared solution setup guidance in the [solutions README](#) rather than duplicating import instructions in each lab.

Use a modern browser such as **Microsoft Edge** or **Google Chrome** for best compatibility.

1. Launch your browser.
2. Open a new window in **InPrivate** or **Incognito** mode.
3. Go to <https://make.powerapps.com> and select your developer environment.

[!NOTE] This lab uses generative AI features. Generated content may differ between users and between the documentation and the live experience. If results vary, use your judgment to complete the task based on the intent and UI you see.

Learning outcomes

By the end of this lab, you will be able to:

- Run natural language queries with the data exploration agent.
- Generate charts with the data visualization agent.
- Use form fill assistance to map unstructured input into record fields.
- Configure row summaries so users can review record context more quickly.

Documentation & learning resources

- [Add agents to your model-driven app](#)
- [Configure a row summary for a model-driven app](#)
- [Use AI form fill assistance feature in model-driven apps](#)
- [Import, update, and export solutions](#)

Core concepts

The in-app agent experiences in this lab include:

Concept	Why it matters
Data exploration agent	Lets users query records with natural language and apply filters without building custom views.
Data visualization agent	Creates charts from the current data context so users can inspect trends quickly.
Data entry agent	Suggests field values from pasted or uploaded content to reduce manual entry.
Row summary agent	Generates concise record summaries that surface key context directly in the app.

Lab steps

Step 1: Use the data exploration agent

Use the data exploration agent to interact with order data using natural language queries that convert to filters.

1. Open the **Northwind Traders** solution, go to **Objects > Apps**, open **Admin Management App**, and click **Play**.

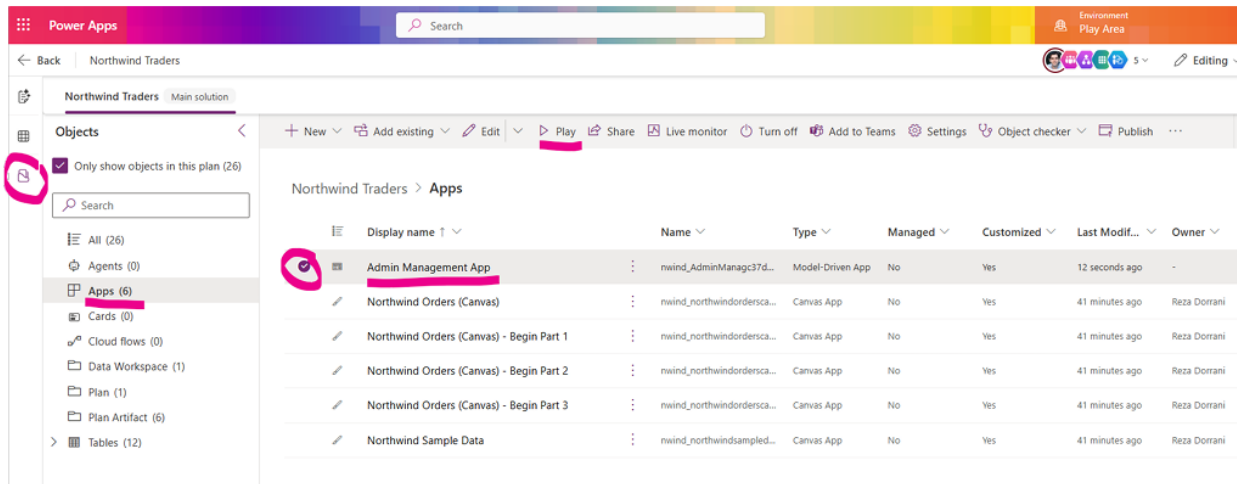

Figure: Open the Admin Management app from the solution.

1. Go to **Orders** and enter the following prompt:

List orders where payment was made via credit card in Chicago

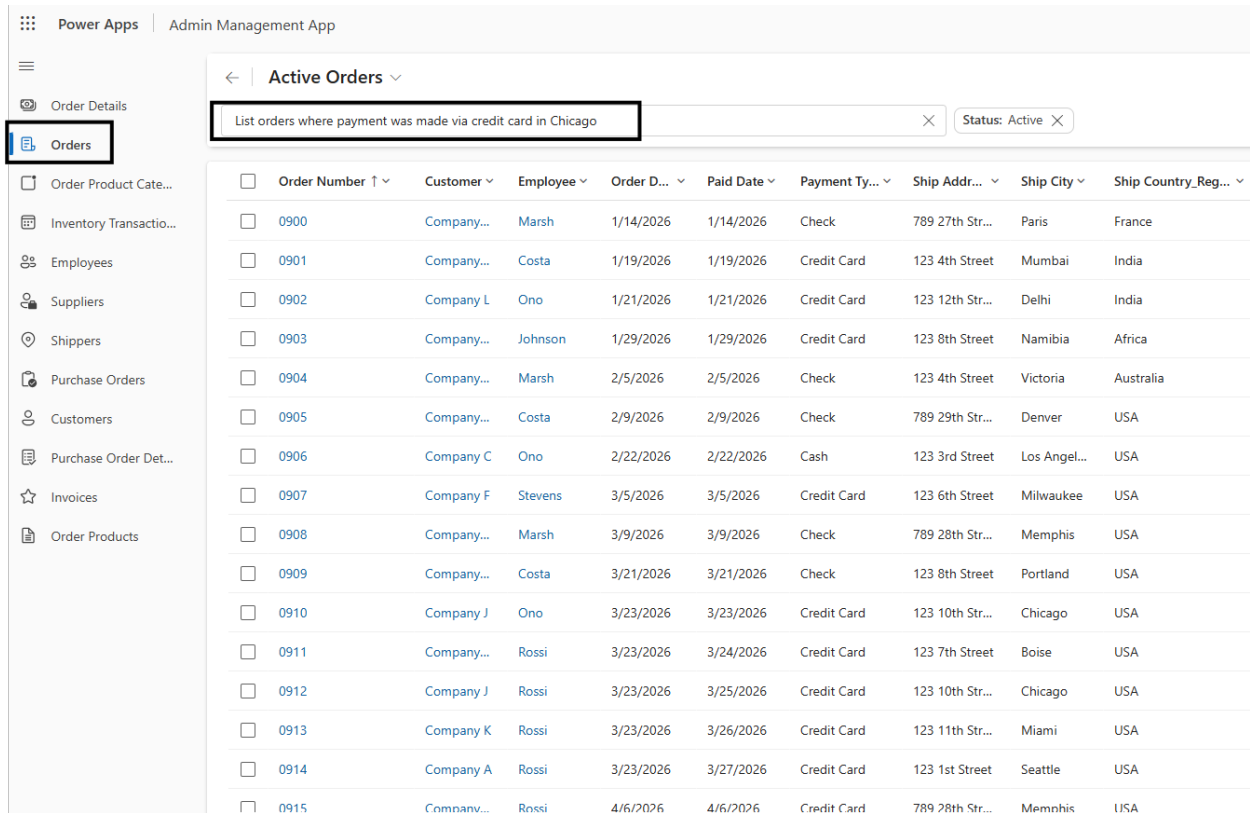

Figure: Enter a natural language query in the Orders view.

- 1. Review the filtered results returned by the agent.

Figure: Credit card orders sorted by payment date.

Step 2: Use the data visualization agent

Use the data visualization agent to automatically generate charts based on the current data context.

1. Go back to **Orders** and click **Visualize**.

Figure: Open the visualization experience from Orders.

1. Review the generated visual. In this example, a column chart shows order counts by city.

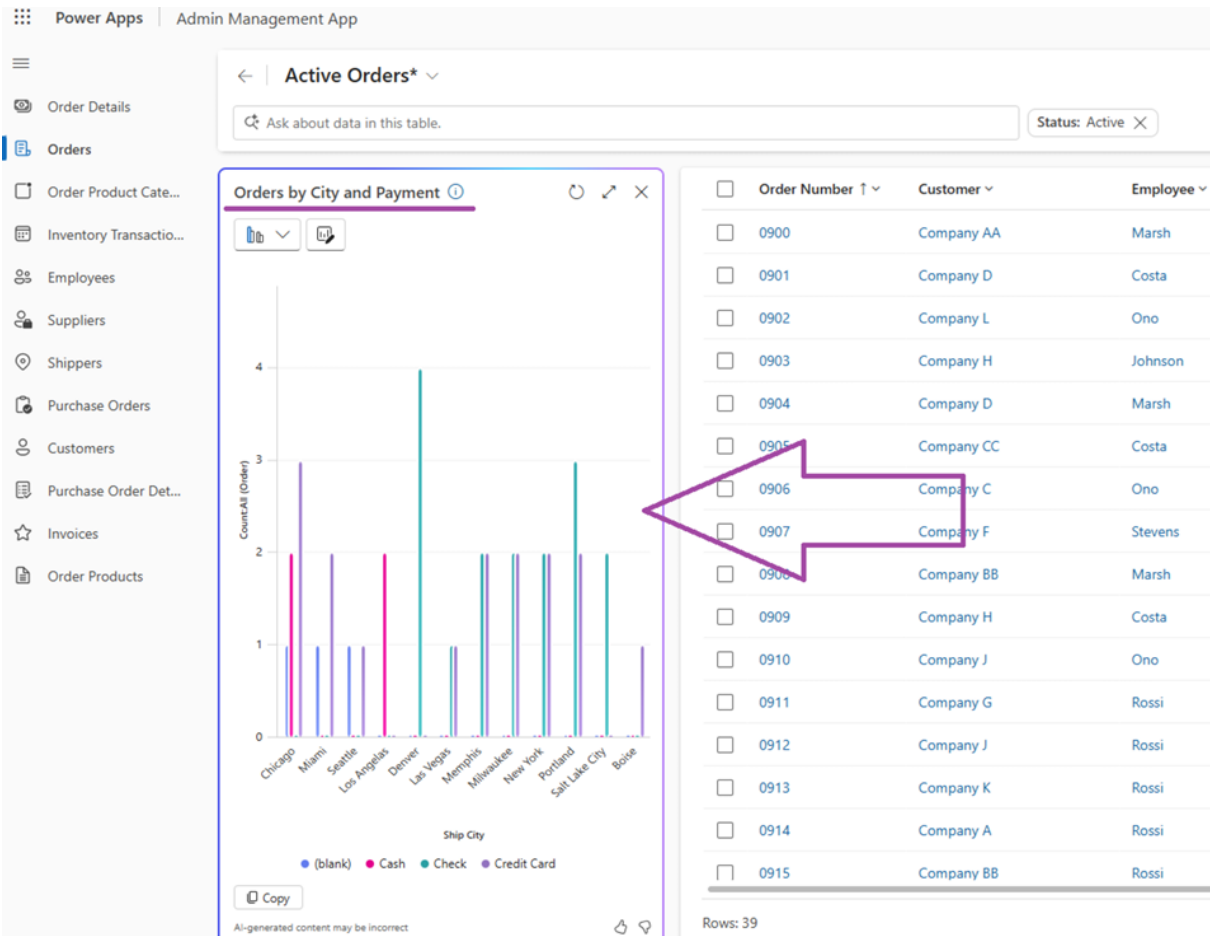

Figure: Example visualization generated from the current Orders context.

1. Click chart options to change the chart type, aggregation, axes, and other properties.

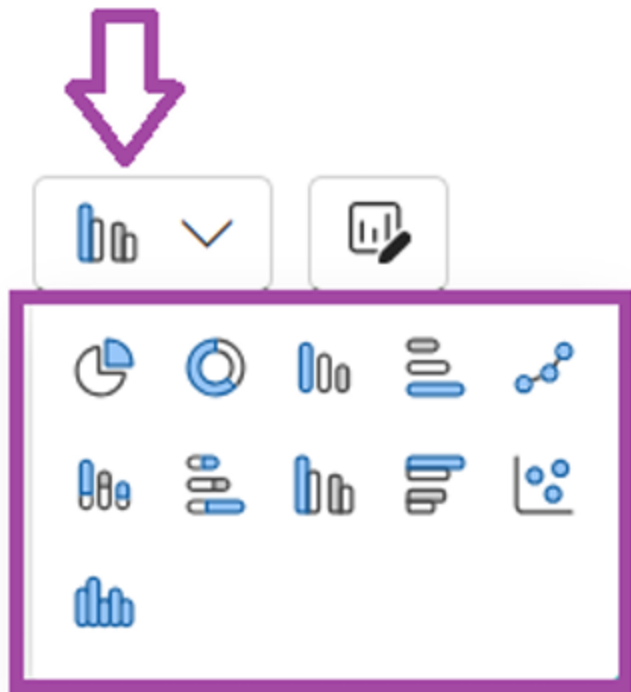

Figure: Chart options for the generated visual.

1. Inspect available properties such as aggregation, X and Y axes, and formatting.

Orders by City and Payment ⓘ ↺ ↻ ✕

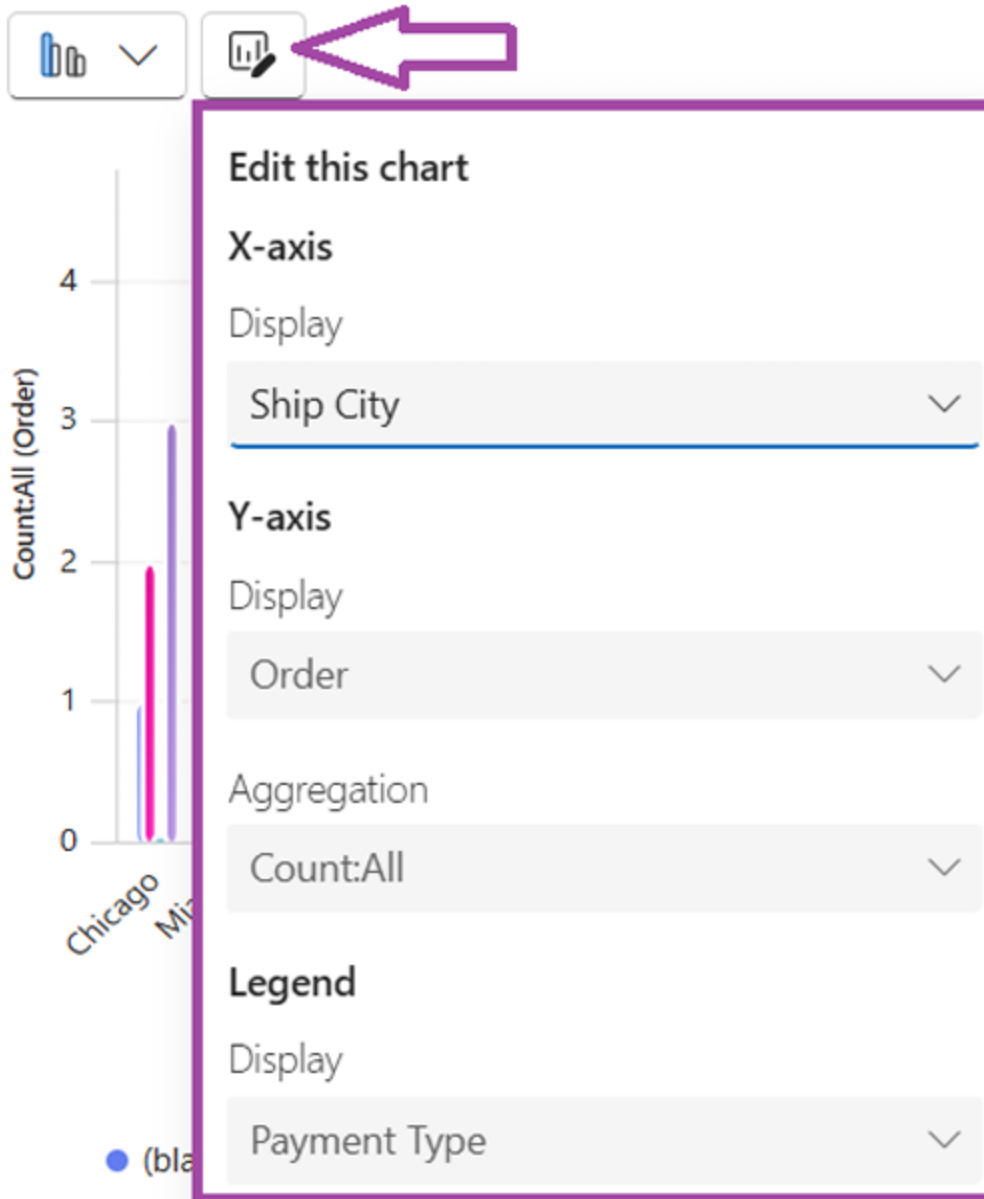

Figure: Properties available for the generated chart.

1. Enter the following prompt to create a visualization:

visualize number of orders and payment type as a pie chart

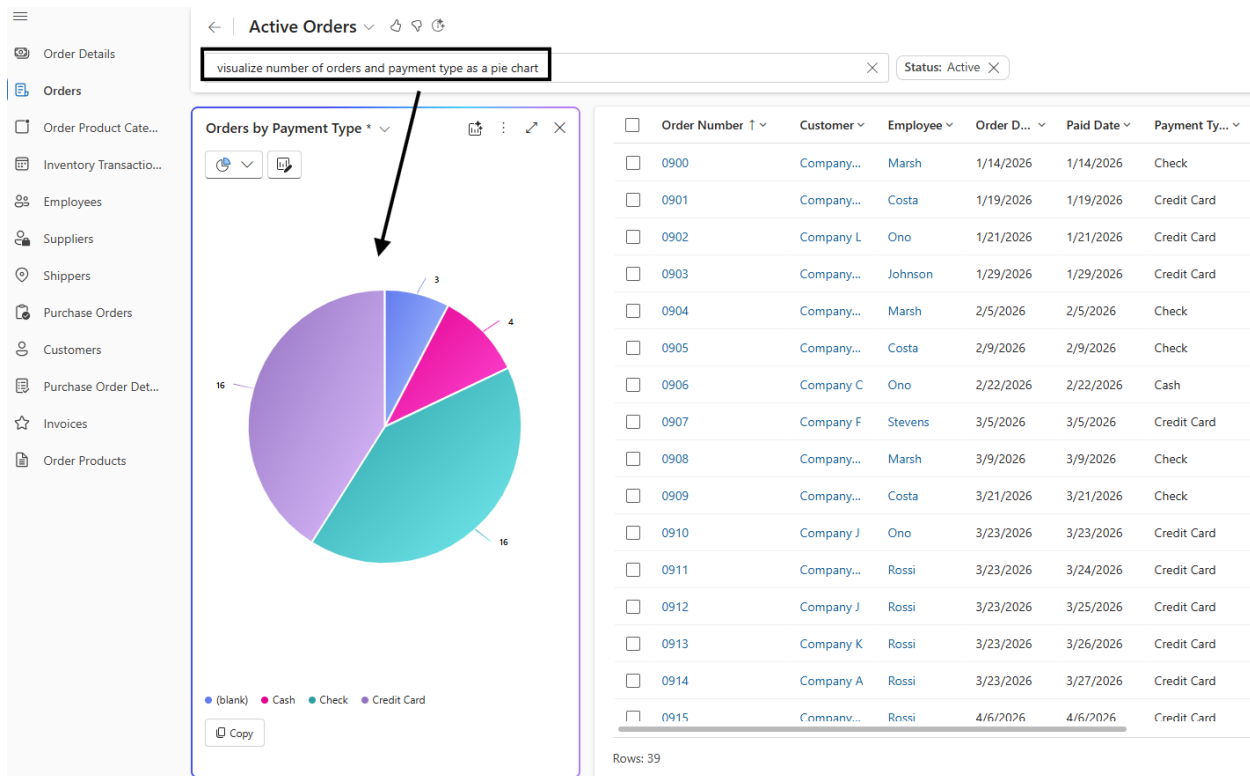

Figure: Pie chart visualization created from a prompt.

Step 3: Use the data entry agent

Use the data entry agent to assist with form completion by suggesting values and mapping unstructured input.

1. In **Orders**, click **New** to create a new order record.

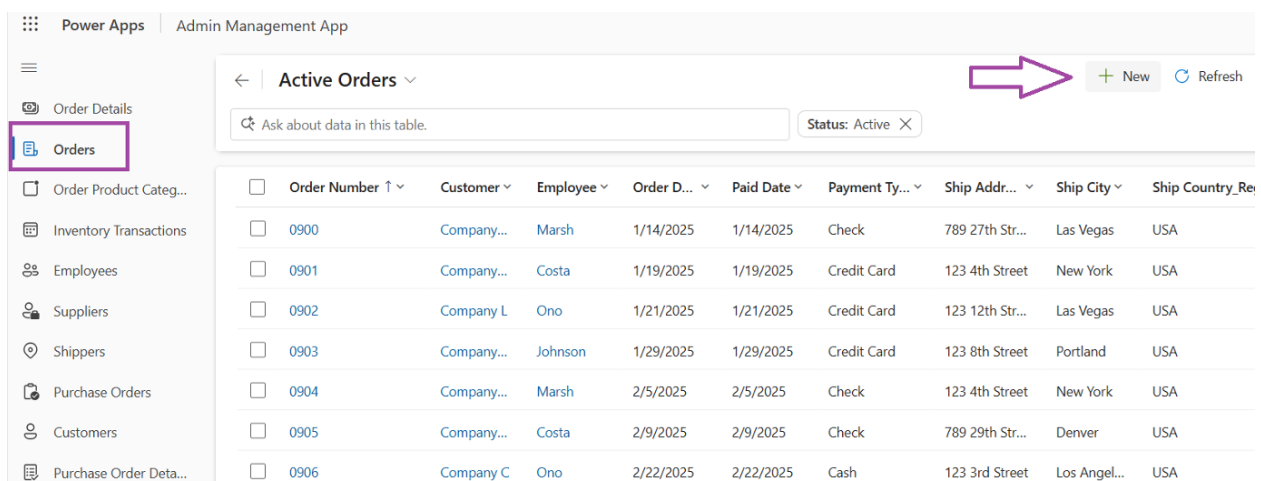

Figure: New order form.

1. Click **Form assist** if the form fill pane is hidden.

The screenshot shows the 'New Order' form in the Power Apps interface. The form is titled 'New Order' and has a sidebar with navigation options. The main form area contains fields for Order Number, Order Status, Order Date, Customer, Employee, Paid Date, Tax Status (set to 'Tax Exempt'), Notes, Payment Type, Ship Country/Region, Ship Address, Ship City, Ship Name, Ship State/Province, Ship ZIP/Postal Code, Shipped Date, Shipper, Shipping Fee, Tax Rate, and Taxes. A 'Form assist' button is visible in the top right corner, indicated by an arrow.

Figure: Form assist pane on the order form.

1. Upload a file or paste clipboard data. The agent detects and maps information to form fields.

The screenshot shows the 'Form assist' pane. It features a dashed blue box with the text 'Drop files or smart paste for Copilot to make suggestions'. To the left of the box are two icons: a square with an upward arrow and a square with a document icon and a plus sign.

Figure: Smart Paste and upload options for form fill assistance.

1. Copy and paste the following sample order text into Smart Paste:

I want to place a new order for customer AA. The order needs to be placed today and the paid date to 2 weeks from now. This order is taxable. Please ship this order to 1 Microsoft Way, Redmond, WA, 98052. The order will be paid via check. Also add a note that this order is for a big private company.

You can also upload the image below to test mapping.

To

I want to place a new order for customer AA.

The Order needs to be placed today and the Paid Date to 2 weeks from now.

This order is going to be Taxable.

Please ship this order to 1 Microsoft Way,
Redmond, WA, 98052

The Order will be paid via check.

Also add a note that this order is for a big private company.

Figure: Reference image for testing form fill mapping.

1. Review the suggestions and accept the values you want to apply.

Summary & best practices

- Use natural language queries and generated visuals to help users explore data without leaving the model-driven app.
- Review AI-generated suggestions and summaries before saving changes to production data.
- Keep shared environment and solution setup instructions in the central workshop prerequisite and solutions documentation.

Lab completion

[!TIP] You completed the in-app agents lab.
