

Module: Test and Run the End-to-End Device Ordering Solution

Overview

In this module, you will validate the integrated solution artifacts created in previous modules: Canvas App, Copilot Agent, Model-driven App, and Cloud Flow. You'll simulate an employee submitting a device request and observe administrative review and automation outcomes.

Learning Objectives

By the end of this module, you will: - Execute an end-to-end (E 2 E) scenario for device ordering. - Validate notification flow execution. - Observe automated or manual approval using the Model-driven App and Agent Feed. - Confirm data consistency across apps.

Prerequisites

- Completion of prior build modules (Canvas App, Copilot Agent, Model-driven App, Cloud Flows).
- Published Canvas App and Model-driven App.
- Published notification cloud flow.
- Sample data in Devices and Device Requests tables.
- User personas available (Employee, IT Administrator, Procurement Admin if added).

Step 1 : Test and run the end-to-end solution

Now, let's test the solution end-to-end (E 2 E).

- 1 . The employee launches the **Device Ordering** app and clicks **Device Requests**.

- 2 . The employee clicks **New** to create a new device request.

- 3 . The form will allow the user to post a new device request.

- 4 . The employee enters the required data in the form and clicks the submit icon.

The screenshot shows the 'Device Requests' application interface. On the left is a sidebar with a search bar and a list of requests: 'Request for Laptop E', 'Request for Tablet C', 'Request for Desktop B', 'Request for Laptop A', and 'Request for Phone D'. The 'Request for Desktop B' item is highlighted. The main area displays a form titled 'Request for Laptop E' (though the content matches the selected item). The form has two sections: 'Request Name' with a text input containing 'Request for Desktop B' and a 'Status' dropdown set to 'Pending'; and 'Device Name' with a dropdown menu set to 'Desktop B'. A submit button with a right-pointing arrow is in the top right corner of the form.

- 5 . The request is submitted. The gallery displays the selected request, and the form shows the submitted data for that request.

This screenshot shows the same 'Device Requests' interface after submission. In the sidebar, 'Request for Desktop B' is now the selected item. The main form area displays the submitted data for this request: 'Request Name' is 'Request for Desktop B', 'Status' is 'Pending', and 'Device Name' is 'Desktop B'. The submit button is no longer visible, replaced by edit and delete icons.

- 6 . As part of the process, the IT Administrator is notified about the newly submitted request. This notification is triggered by the flow created in the previous steps.

The screenshot shows a Microsoft Teams notification window titled 'New device request submitted'. The notification is from 'Reza Dorrani' and is addressed 'To: Reza Dorrani'. It includes a 'Summary by Copilot' header and a 'Low importance' label. The main body of the notification states 'Request Name: Request for Desktop B'. At the bottom, there are 'Reply' and 'Forward' buttons. The notification is displayed over a background showing a list of messages in a Teams chat window.

- 7 . The IT administrator can then use the model-driven app to view, approve, or reject the device request.

Sign in to the model-driven app and open Agent Feed by clicking the **Agent Feed** icon on the left. Depending on the device submitted and its price, the agent may have already approved the request for the administrator.

The **Device Requests** page will show all the submitted device requests. The newly requested device entry will be listed. IT admin can select the device request to act.

- 8 . Upon selection of a device request, the IT admin will be redirected to a form where they can update the Status (Approval decision)

Power Apps | Device Request Management

Search

Active Device Requests

Ask about data in this table. Status: Active

Request Name	Employee Name	Device Name	Status
☒ Request for Desktop B	Beza Dorrans (Offline)	Desktop B	Pending
☐ Request for Laptop A	Sarah Tabor (Away)	Laptop A	Pending
☐ Request for Laptop E	Rasika Admin (Offline)	Laptop E	Pending
☐ Request for Phone D	Sarah Tabor (Away)	Phone D	Pending
☐ Request for Tablet C	James Taylor (Offline)	Tablet C	Pending

IT admin sets the Status and Saves their response.

The screenshot shows a form titled "Request for Desktop B - Saved" with a sub-header "Device Request". The form has tabs for "General" and "Related". The "General" tab is active. The form fields are: "Request Name" (Request for Desktop B), "Owner" (Reza Dorrani (Offline)), "Employee Name" (Reza Dorrani (Offline)), and "Device Name" (Desktop B). The "Status" field is set to "Pending". A dropdown menu is open for the "Status" field, showing options: "--Select--", "Pending" (checked), "Approved", and "Rejected". An arrow points to the "Approved" option.

Request Name * Request for Desktop B

Owner * Reza Dorrani (Offline) x

Employee Name Reza Dorrani (Offline) x

Device Name Desktop B x

Status Pending

--Select--

✓ Pending

Approved

Rejected

9 . The response update will be reflected in both the Apps (IT admin and employee)

The screenshot shows two views of the "Device Requests" app. The top view is a table titled "Active Device Requests" with columns: Request Name, Employee Name, Device Name, and Status. The bottom view is the "Device Requests" app interface, showing a search bar, a "+ New" button, and a list of requests. The first request in the list is "Request for Desktop B" with status "Approved".

Request Name	Employee Name	Device Name	Status
Request for Desktop B	Reza Dorrani (Offli...	Desktop B	Approved
Request for Laptop A	Sarah Tabor	Laptop A	Pending
Request for Laptop E	Rasika Admin	Laptop E	Pending
Request for Phone D	Sarah Tabor	Phone D	Pending
Request for Tablet C	james taylor	Tablet C	Pending

Completion

Congratulations! 🎉

You have successfully completed the Hands-On Lab Module: End-to-End Testing!

Next Steps

- Extend automation with additional flows (e.g., procurement order creation).
- Add dashboards or reports for inventory and request analytics.
- Proceed to subsequent workshop modules as defined in the curriculum.
