1. Power Apps Catalyst overview

1.1. Lab purpose

Microsoft 365 Copilot Chat is natively integrated into model driven apps to help users reason over data, navigate the application, and complete everyday tasks without requiring any custom agent authoring. -driven apps to help users reason over data, navigate the application, and complete everyday

Out of the box, users can:

- Ask natural language questions over Dataverse data exposed through the app language.-language questions over Dataverse data exposed through the
- Summarize records, views, and related information.
- Get contextual insights while working within business processes.
- Quickly understand entity relationships and record history
- Receive assistance grounded in the app's schema, security, and user context.

1.2. Why these matters

Enterprises don't struggle with data they struggle with connecting context, action, and decision making.

Microsoft 365 Copilot adds enterprise value because it can:

1. Understand work context across platforms- Combines Dataverse business data with Microsoft 365 signals from emails, meetings, documents, tasks, and calendars.
2. Reason across structured and unstructured data, connects records (cases, accounts, approvals) with conversations, documents, and historical decisions to provide richer insights.
3. Produce action ready content, drafts emails, summaries, notes, and next steps using the user's organizational tone and security context. Additional capabilities to consider are document generation and meeting scheduling from a conversation content ready. -

2. Documentation & learning resources

- [Add Microsoft 365 Copilot chat for app users in model-driven apps \(preview\) - Power Apps | Microsoft Learn](#)
- Ignite Presentation: <https://ignite.microsoft.com/en-US/sessions/BRK322>

3. Prerequisites

- **Important: This feature is in the process of rolling out and might not be available in your region yet.**

- An administrator must enable Microsoft 365 Copilot chat in your environment and application before it becomes visible in your app. For more information, see [Add Microsoft 365 Copilot chat for app users in model-driven apps](#).
- 'Northwind traders' solution is installed in your environment with "Admin Management App"
- Ensure you are logged in with a user that has M365 Copilot license and Microsoft 365 E5 Licenses
- Log in to your M365 copilot to verify you have access to emails through your licenses.
- User executing this lab should have this email or meeting invite in their outlook inbox:

Subject: QBR Executive Meeting-Sales Performance Presentation

Body:

Hello Joe,

We would like to invite you to present in the upcoming **Executive Quarterly Business**

Review.

For this session, please cover:

- Topselling products for the quarterselling products for the quarter-selling products for the quarter
- Overall sales trends and performance analysis
- Key insights and implications for leadership

The audience will include senior leadership, so we're looking for a concise, executive level view focused on trends, insights, and business impact rather than operational detail.

Please let us know if you have any questions or require additional context ahead of the meeting.

4. Known limitations

- Microsoft 365 Copilot for model-driven apps allows users to view Dataverse data by using read-only operations. This capability means that users can only view data that matches their queries and can't make any changes. To make changes, customization with an agent is required.
- Creating, updating, or performing other actions isn't supported unless you customize with an agent.
- Microsoft 365 Copilot for model-driven apps isn't available in the Power Apps mobile app.
- As this feature is gradually deployed, certain settings in the Power Platform Admin Center might not be accessible yet depending on the geographic location of your tenant.

5. Lab instructions

Use case: Annual Sales Trend Analysis

Scenario	You are preparing for an upcoming Executive Quarterly Business Review (QBR) where you have been asked to present: • Top selling products for the quarter -selling products for the quarter • Overall sales trends and performance analysis • Key insights and implications for leadership To prepare for this meeting, you will use Microsoft 365 Copilot Chat embedded in a Model Driven App within the Northwind Traders solution. Instead of exporting data or switching between tools, you will: 1. Review the executive meeting request and understand the business requirements. 2. Open the Northwind Traders Model Driven App, which contains the sales and product data 3. Use M365 Copilot Chat (Catalyst) within the app to: ○ Identify top selling products for the quarter selling products ○ Analyze sales trends and performance patterns ○ Generate executive level insights grounded in the app's data level insights 4. Ask Copilot to draft an executive ready meeting deck summarizing the findings. 5. Share the prepared deck in advance with leadership ahead of the QBR. This lab demonstrates how M365 Copilot enables users to move seamlessly from business question → data driven insight → executive artifact, all within the context of a Model Driven App
-----------------	--

Step-by-step instructions

1. Login to M365 Copilot(<https://m365.cloud.microsoft>). In the chat give the below prompt:
When's my next QBR meeting
2. Launch the Admin Management App(check lab pre requisites) and Click on the Copilot Icon as highlighted below. This will open the M365 Copilot chat associated with this account (It may ask you to sign in again or refresh):

NOTE: If it asks to refresh multiple times try login into M365 copilot in another tab and then refresh.

The screenshot displays the Microsoft Power Apps interface. On the left is a navigation pane with options like 'Order Details', 'Orders', 'Order Product Category...', 'Inventory Transactions', 'Employees', 'Suppliers', 'Shippers', 'Purchase Orders', 'Customers', 'Purchase Order Details...', 'Invoices', and 'Order Products'. The main area shows a table titled 'Active Order Details' with columns: Order, Product, Purchase Order, Quantity, Unit Price, Discount, and Order Detail Status. The table contains 20 rows of data for various orders from Northwind Ltd. On the right, a Copilot chat window is open, displaying a greeting 'Hi, how can I help?' and an 'Authentication required' message with a 'Continue' button.

3. Open the navigation panel on the M365 Copilot chat to access the chat history

This screenshot shows the Microsoft Power Apps interface with the 'Active Orders' table. The table has columns: Order Number, Customer, Employee, Order Date, Paid Date, Payment Type, Ship Address, Ship City, Ship Country, Region, and Ship Name. It lists 15 orders. On the right, the Copilot chat window is open. A red box highlights the chat history panel, which shows a previous conversation about a QBR meeting. The chat history includes a title 'When's my next QBR meeting', a response from Copilot stating the meeting is tonight, and details about the upcoming meeting (QBR Executive Meeting-Sales Performance Presentation) including the time (9:00-9:30 PM PT), organizer (Ankita Chopra), location (Microsoft Teams), and a note that RSVPs haven't been received yet. Below the chat history, there is a section for 'Sources' and a 'Pull prep materials for the QBR' button. At the bottom of the chat window, there is a text input field and a 'Message Copilot' button.

4. Let's give this prompt to M365 Copilot to gather details for this Exec meeting “**Topselling products for the quarter in Orders**”-selling products for the quarter in Orders

The screenshot displays the Microsoft Power Apps Admin Management App interface. On the left, a navigation pane lists various app components: Order Details, Orders, Order Product Category, Inventory Transaction, Employees, Suppliers, Shippers, Purchase Orders, Customers, Purchase Order Details, Invoices, and Order Products. The main area shows the 'Active Order Details' table, which includes columns for Order ID, Product, Purchase Order, Quantity, Unit Price, Discount, and Order Detail. The table lists various products from Northwind Traders, such as Scones, Curry Sauce, Green Tea, Dried Plums, Coffee, and Tea, with their respective quantities and prices.

On the right, the Copilot chat interface is visible. It shows a prompt: 'Top-selling products for the quarter in Orders'. The Copilot response provides a list of top-selling products for the quarter, ranked by total order amount (highest to lowest). The results are as follows:

Rank	Product	Total Order Amount
1	Northwind Traders Coffee	29,670
2	Northwind Traders Clam Chowder	1,930
3	Northwind Traders Chocolate	1,402.50
4	Northwind Traders Beer	1,400
5	Northwind Traders Green Tea	822.25
6	Northwind Traders Tea	720
7	Northwind Traders Curry Sauce	680
8	Northwind Traders Biscuits Mix	552
9	Northwind Traders Dried Apples	530
10	Northwind Traders Dried Pears	300

5. Now let's give this prompt to M365 Copilot to generate chart and analysis trends based on the data in this app: ***"Show me Overall sales trends and performance of products analysis for this quarter. Compare the sales performance for this quarter with last quarter. Give me the results in chart format and downloadable report"***

The screenshot displays the Microsoft Power Apps Admin Management App interface, similar to the previous one. The main area shows the 'Active Order Details' table, which lists various products from Northwind Traders, such as Scones, Curry Sauce, Green Tea, Dried Plums, Coffee, and Tea, with their respective quantities and prices.

On the right, the Copilot chat interface is visible. It shows a prompt: 'Absolutely — here's a clean "Copilot-style" chart plus a downloadable Excel (so you can reuse the data in your deck)'. The Copilot response provides a chart titled 'Product Sales Performance — This Quarter (Orders)'. The chart shows the total order amount by product, ranked by total order amount (highest to lowest). The results are as follows:

Rank	Product	Total Order Amount
1	Northwind Traders Coffee	29,670
2	Northwind Traders Clam Chowder	1,930
3	Northwind Traders Chocolate	1,402.50
4	Northwind Traders Beer	1,400
5	Northwind Traders Green Tea	822.25
6	Northwind Traders Tea	720
7	Northwind Traders Curry Sauce	680
8	Northwind Traders Biscuits Mix	552
9	Northwind Traders Dried Apples	530
10	Northwind Traders Dried Pears	300

6. In order to take further action on the analysis trend click on the ellipses in the Copilot and open the chat in M365 Copilot app as shown below:

Message Copilot

7. Give the following prompt to the M365 Copilot to create a power point presentation based on the trend analysis data: **“Prepare an exec briefing presentation for the upcoming QBR with the above data: Topselling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership”-selling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership”**

The screenshot shows the Microsoft 365 Copilot interface. On the left is a sidebar with navigation options: New chat, Search, Library, Create, Agents (Researcher, Analyst, Microsoft 365 Admin, New agent, All agents), Notebooks (All notebooks), and Chats (Next QBR Meeting Date Inquiry, All chats). The main area displays a chat conversation titled "Next QBR Meeting Date Inquiry". A red box highlights the prompt: "Prepare an exec briefing presentation for the upcoming QBR with the above data: Top-selling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership". Below the prompt, Copilot's response is shown: "Here's a concise, executive-ready QBR briefing deck you can use as-is or paste directly into PowerPoint. It is grounded only in the Orders data we successfully pulled and analyzed in this conversation (no assumptions, no fabricated trends)." The output is titled "Executive QBR Briefing" and "Sales Performance — Current Quarter". It includes "Slide 1 — Executive Summary (TL;DR)" with a headline: "Quarterly sales performance was highly concentrated, with one product driving the majority of revenue." and a key point: "One flagship product accounts for the dominant share of total sales this quarter."

8. You should be able to download the presentation generated by M365 Copilot:

This screenshot shows the continuation of the Copilot interface. A button "Convert briefing into PowerPoint slides" is visible. Below it, Copilot's response states: "The generated 'QBR_Executive_Briefing_Sales_Performance.pptx' file was saved to OneDrive." A red box highlights the section where Copilot confirms: "I've converted the executive briefing into a PowerPoint slide deck you can open, edit, and present for the QBR." and provides a "Download the PowerPoint" link. The download link is titled "Executive QBR Briefing – Sales Performance (PPTX)" and the text "Download the presentation" is highlighted. Below this, a section titled "What's included in the deck" lists the contents: 1. Executive Summary – one-slide TL;DR, 2. Top-Selling Products (This Quarter) – ranked highlights, 3. Overall Sales Trends & Performance – concentration & Pareto pattern, 4. Quarter-over-Quarter Context – transparent data limitation call-out, 5. Key Insights – what matters, not just what happened, 6. Implications for Leadership – concrete strategic takeaways, 7. Closing – concise exec-level conclusion. A small disclaimer at the bottom reads: "All content is grounded in the Orders data we analyzed together, no assumptions, no inflated claims."

9. Give the following prompt to create an email reply for the executive meeting: **“send a reply to the QBR meeting invite with the presentation”**

The screenshot shows the Microsoft Copilot interface. On the left is a sidebar with navigation options: New chat, Search, Library, Create, Agents (Researcher, Analyst, Microsoft 365 Admin), Notebooks, and Chats. The 'Next QBR Meeting Date Inquiry' chat is selected. The main area shows a prompt box with the text 'send an reply to the QBR meeting invite with the presentation' highlighted in a red box. Below the prompt, Copilot has generated an email draft. The draft includes a subject line 'Re: QBR Executive Meeting – Sales Performance', a recipient 'Ankita Chopra', and a body with a greeting, a list of topics (Top-selling products, Overall sales trends, Key insights), a link to a presentation file, and a closing. A green checkmark icon indicates the draft is ready for review and sending.

Next QBR Meeting Date Inquiry

Work Web

send an reply to the QBR meeting invite with the presentation

Copilot

I've drafted a **reply email** to the QBR meeting invite with a clear, executive-appropriate message and a reference to the presentation.

✓ Email draft (ready to review and send)

Subject: Re: QBR Executive Meeting – Sales Performance

To: Ankita Chopra

Body:

Hi Ankita,

Thanks for the invitation. I've prepared the executive briefing for the upcoming QBR covering:

- Top-selling products for the quarter
- Overall sales trends and performance analysis
- Key insights and implications for leadership

You can access the presentation here:

[QBR_Executive_Briefing_Sales_Performance.pptx](#)

Happy to walk through any section in advance or tailor the emphasis for the discussion.

10. Click on “Edit in outlook” option to directly edit the response in outlook and send the email.

This screenshot shows the same Microsoft Copilot interface as the previous one, but with the 'Edit in Outlook' button highlighted in a red box at the bottom of the email draft. The draft content is identical. Below the draft, there is a 'Sources' section and a 'You can use this draft as a starting point and edit it before sending.' message, followed by a link to the presentation file and a note about tightening the language. The 'Edit in Outlook' button is located at the bottom of the draft area.

Best regards,

MOD Administrator

You can use this draft as a starting point and edit it before sending.

For convenience, here's the presentation file to reference or attach in Outlook:

[QBR_Executive_Briefing_Sales_Performance.pptx](#)

If you'd like, I can tighten the language further (more formal / more concise), or reframe it as an “attached for review” note once you add the file directly in Outlook.
