

Description

Use when a customer requests a return or refund for a Northwind Traders order. Trigger phrases: "return", "refund", "send back", "wrong item", "cancel order".

Instructions

Step 1 – Validate order and retrieve customer details

Run a single query to confirm the order exists, is within the 30-day return window, is not already closed, and return the customer email in one round trip.

```
SELECT
    o.nwind_orderid,
    o.nwind_ordernumber,
    o.nwind_orderdate,
    o.nwind_orderstatusid,
    c.nwind_customerid,
    c.nwind_emailaddress
FROM nwind_orderses AS o
JOIN nwind_customerses AS c ON o.nwind_customerid = c.nwind_customerid
WHERE (o.nwind_ordernumber = @OrderNumber OR o.nwind_customerid =
@CustomerID)
    AND o.nwind_orderdate >= DATEADD(day, -30, GETDATE())
    AND o.nwind_orderstatusid <> 3;
```

If no rows are returned the order is ineligible (outside the 30-day window or already closed). Stop and notify the customer.

Step 2 – Confirm all line items are returnable

Run a single join across order details, products, and categories to retrieve every line item and its category name in one query.

```
SELECT
    od.nwind_orderdetailid,
    od.nwind_productid,
    od.nwind_quantity,
    p.nwind_productname,
    cat.nwind_name AS category_name
FROM nwind_orderdetailses AS od
JOIN nwind_productses AS p ON od.nwind_productid = p.nwind_productid
JOIN nwind_categorieses AS cat
    ON p.nwind_categoriesid = cat.nwind_categoriesid --
nwind_Products_nwind_Categories
WHERE od.nwind_orderid = @OrderID;
```

If any row has a `category_name` not in ('Dried Fruit', 'Condiments'), exclude that line item and notify the customer that perishable/fresh/frozen items are non-returnable. Proceed only with eligible line items.

Step 3 – Close the order

```
UPDATE nwind_orderses
SET     nwind_orderstatusid = 3    -- Closed
WHERE   nwind_orderid = @OrderID;
```

Step 4 – Create inventory return transactions

For each eligible line item from Step 2, insert one inventory transaction record.

```
INSERT INTO nwind_inventorytransactionses
(nwind_productid, nwind_customerorderid, nwind_quantity,
nwind_transactiontype)
VALUES
(@ProductID, @OrderID, @ReturnedQty, 1); -- type 1 = Purchased /
Returned
```

Repeat for every returned order detail line.

Step 5 – Draft refund confirmation

Use `nwind_emailaddress` from Step 1 to draft a refund confirmation email to the customer.
