**Commented [M51]:** General comment. First, thank you, thank you, thank you for building this!

We are targeting public preview of canvas apps some time in February. We are already bug bashing it in test to ready it for public preview. We have a few more bugs to fixe before we can let you try it, but once it is available, I suspect most of what you put in this document will equally apply to canvas apps. While there will be some nuances in the maker experience differences and runtime differences, you should start thinking about how this can evolve to help people with both. See this deck for high level details on what we plan do to do for canvas.  
[M365 Copilot in Power Apps .pptx](#)

Feel free to schedule a meeting to discuss more if it would help.

## 1. Power Apps Catalyst overview

### 1.1. Lab purpose

Microsoft 365 Copilot Chat is natively integrated into model driven apps to help users reason over data, navigate the application, and complete everyday tasks without requiring any custom agent authoring. Driven apps to help users reason over data, navigate the application, and complete everyday tasks driven apps to help users reason over data, navigate the application, and complete everyday tasks.driven apps to help users reason over data, navigate the application, and complete everyday driven apps to help users reason over data, navigate the application, and complete everyday -driven apps to help users reason over data, navigate the application, and complete everyday

Out of the box, users can:

- Ask natural language questions over Dataverse data exposed through the app language questions over Dataverse data exposed through the app.language questions over Dataverse data exposed through the language questions over Dataverse data exposed through the -language questions over Dataverse data exposed through the
- Summarize records, views, and related information.
- Get contextual insights while working within business processes.
- Quickly understand entity relationships and record history
- Receive assistance grounded in the app's schema, security, and user context.

This built in Copilot experience works out of the box, requiring no additional configuration, prompts, or agent creation. It enables organizations to confidently adopt Copilot in model driven apps with minimal setup, while delivering meaningful productivity gains to end users from day one.in Copilot experience works out of the box, requiring no additional configuration, prompts, or agent creation. It enables organizations to confidently adopt Copilot in model driven apps with minimal setup, while delivering meaningful productivity gains to end users from day one.-in Copilot experience works out of the box, requiring no additional configuration, prompts, or agent creation. It enables organizations to confidently adopt Copilot in model-driven apps with minimal setup, while delivering meaningful productivity gains to end users from day one.

As part of the Power Apps and Microsoft 365 Copilot roadmap, this out of the box (OOB) Copilot experience will continue to evolve, expanding its capabilities while maintaining a simple, ready to use experience OOB Copilot experience will continue to evolve, expanding its capabilities while maintaining a simple, ready to use experience.-of-the-box (OOB) Copilot experience will continue to evolve, expanding its capabilities while maintaining a simple, ready-to-use experience.

## 1.2. Why these matters

Enterprises don't struggle with data they struggle with connecting context, action, and decision making.

Microsoft 365 Copilot adds enterprise value because it can:

1. Understand work context across platforms  
Combines Dataverse business data with Microsoft 365 signals from emails, meetings, documents, tasks, and calendars.
2. Reason across structured and unstructured data  
Connects records (cases, accounts, approvals) with conversations, documents, and historical decisions to provide richer insights.
3. Produce action ready content  
Drafts emails, summaries, notes, and next steps using the user's organizational tone and security context. Additional capabilities to consider are document generation and meeting scheduling from a conversation content ready. -

**Commented [MS2]:** Additional capabilities to consider are document generation and meeting scheduling from a conversation.

## 2. Documentation & learning resources

- [Add Microsoft 365 Copilot chat for app users in model-driven apps \(preview\) - Power Apps | Microsoft Learn](#)
- Ignite Presentation: <https://ignite.microsoft.com/en-US/sessions/BRK322>

## 3. Prerequisites

- **Important: This feature is in the process of rolling out and might not be available in your region yet.**
- An administrator must enable Microsoft 365 Copilot chat in your environment and application before it becomes visible in your app. For more information, see [Add Microsoft 365 Copilot chat for app users in model-driven apps](#).
- 'Northwind traders' solution is installed in your environment with "Admin Management App"
- Ensure you are logged in with a user that has M365 Copilot license and Microsoft 365 E5 Licenses
- Log in to your M365 copilot to verify you have access to emails through your licenses.
- User executing this lab should have this email or meeting invite in their outlook inbox:

**Subject: QBR Executive Meeting-Sales Performance Presentation**

**Body:**

Hello Joe,

We would like to invite you to present in the upcoming **Executive Quarterly Business Review**.

For this session, please cover:

- Topselling products for the quarterselling products for the quarter-selling products for the quarter
- Overall sales trends and performance analysis
- Key insights and implications for leadership

The audience will include senior leadership, so we're looking for a concise, executive level view focused on trends, insights, and business impact rather than operational detail.

Please let us know if you have any questions or require additional context ahead of the meeting.

4. Known limitations

- Microsoft 365 Copilot for model-driven apps allows users to view Dataverse data by using read-only operations. This capability means that users can only view data that matches their queries and can't make any changes. To make changes, customization with an agent is required.
- Creating, updating, or performing other actions isn't supported unless you customize with an agent.
- Microsoft 365 Copilot for model-driven apps isn't available in the Power Apps mobile app.
- As this feature is gradually deployed, certain settings in the Power Platform Admin Center might not be accessible yet depending on the geographic location of your tenant.

5. Lab instructions

Use case: Annual Sales Trend Analysis

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**Commented [MS3]:** Same comment about repeating what's in our docs. This limitations will change. Some will be addressed, some new ones will be added. This cycle will repeat for the foreseeable future. Given the pattern here, perhaps there is an opportunity for you to contribute to our docs vs duplicating them with added value?

**Commented [AC4R3]:** I will add a link to public document and a note mentioning that these limitation are changing

**Commented [SN5]:** Could Dataverse MCP Server be used for this ? I believe MCP Server supports full CRUD operations.

**Commented [RS6R5]:** I believe atm the Out of the Box Agent (the one platform creates when we activate the setting) is limited to retrieve info. If we need to use MCP or other action we need to Customize this OOB agent with CPS .

**Commented [MS7R5]:** Correct. CUD is on our roadmap, but not available yet.

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p><b>Model Driven App</b> within the <b>Northwind Traders</b> solution.</p> <p>Instead of exporting data or switching between tools, you will:</p> <ol style="list-style-type: none"><li>1. Review the executive meeting request and understand the business requirements.</li><li>2. Open the <b>Northwind Traders Model Driven App</b>, which contains the sales and product data</li><li>3. Use <b>M365 Copilot Chat (Catalyst)</b> within the app to:<ul style="list-style-type: none"><li>o Identify top selling products for the quarter selling products</li><li>o Analyze sales trends and performance patterns</li><li>o Generate executive level insights grounded in the app's data level insights</li></ul></li><li>4. Ask Copilot to draft an <b>executive ready meeting deck</b> summarizing the findings.</li><li>5. Share the prepared deck in advance with leadership ahead of the QBR.</li></ol> <p>This lab demonstrates how <b>M365 Copilot enables users to move seamlessly from business question → data driven insight → executive artifact</b>, all within the context of a Model Driven App</p> |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Step-by-step instructions

1. Login to M365 Copilot(<https://m365.cloud.microsoft>). In the chat give the below prompt: "**When's my next QBR meeting**"
2. Launch the **Admin Management App**(check lab pre requisites) and Click on the Copilot Icon as highlighted below. This will open the M365 Copilot chat associated with this account (It may ask you to sign in again or refresh):

**Commented [LT8]:** The prompt returns a message like: I'd love to check your calendar — but I **don't have automatic access to your Outlook or Teams calendar** unless you share an event or upload something I can read.

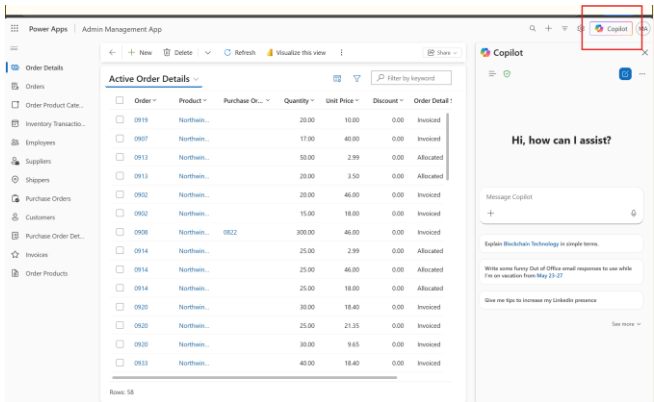

**Commented [AC9R8]:** Which user did you use?

**Commented [LT10]:** There is not link between the first and the second step. Should the a solution be included in the lab to add the app?

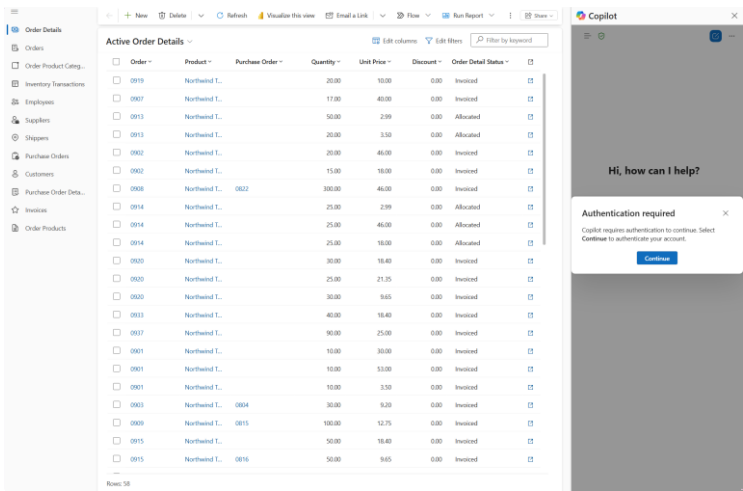

**Commented [AC11R10]:** Its in prerequisite

Microsoft

Power CAT | The Intelligent Enterprise-Power Platform  
& AI for Frontier Firms

**NOTE: If it asks to refresh multiple times try login into M365 copilot in another tab and then refresh.**

**Commented [DP12]:** Copilot Option Available only If we use Edge browser adding New User Profile. InPrivate window, copilot option is not Enabled.

**Commented [RS13]:** I get stuck on “Authenticating - Something went wrong”

| Price | Discount | Order Detail Status |  |
|-------|----------|---------------------|--|
| 10.00 | 0.00     | Invoiced            |  |
| 40.00 | 0.00     | Invoiced            |  |
| 2.99  | 0.00     | Allocated           |  |
| 3.50  | 0.00     | Allocated           |  |
| 46.00 | 0.00     | Invoiced            |  |
| 18.00 | 0.00     | Invoiced            |  |
| 46.00 | 0.00     | Invoiced            |  |
| 2.99  | 0.00     | Allocated           |  |
| 46.00 | 0.00     | Allocated           |  |
| 18.00 | 0.00     | Allocated           |  |
| 18.40 | 0.00     | Invoiced            |  |

| 9.65  | 0.00     | Invoiced            |  |
| 18.40 | 0.00     | Invoiced            |  |
| 25.00 | 0.00     | Invoiced            |  |

**Commented [RS14R13]:** After several refresh worked

**Commented [RC15]:** I added this screenshot - if in case any trainee experiences this during their lab

Microsoft

## Power CAT | The Intelligent Enterprise-Power Platform & AI for Frontier Firms

3. Open the navigation panel on the M365 Copilot chat to access the chat history

Commented [LT16]: Same that when using the prompt

The screenshot shows the Power Apps Admin Management App interface. On the left is a navigation panel with options like 'Order Details', 'Orders', 'Order Product Catalog', 'Inventory Transactions', 'Employees', 'Suppliers', 'Shippers', 'Purchase Orders', 'Customers', 'Purchase Order Details', 'Invoices', and 'Order Products'. The main area displays a table titled 'Active Orders' with columns: Order Number, Customer, Employee, Order Date, Paid Date, Payment Type, Ship Address, Ship City, Ship Country, Region, and Ship Name. The table contains 20 rows of order data. On the right, the M365 Copilot chat interface is open, showing a conversation about an upcoming meeting. A red box highlights the 'Copilot' button in the top right corner of the chat window.

4. Let's give this prompt to M365 Copilot to gather details for this Exec meeting **Topselling products for the quarter in Orders** **selling products for the quarter in Orders** **selling products for the quarter in Orders** **selling products for the quarter in Orders**

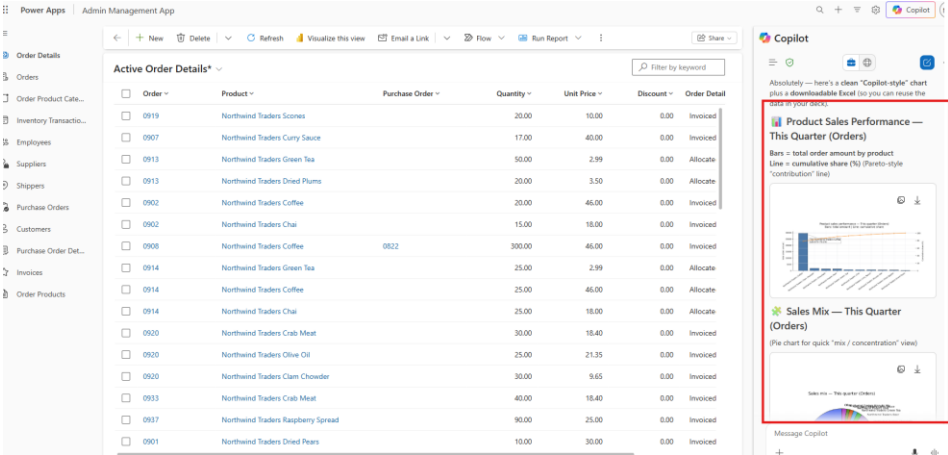

The screenshot shows the Power Apps Admin Management App interface. On the left is a navigation panel with options like 'Order Details', 'Orders', 'Order Product Catalog', 'Inventory Transactions', 'Employees', 'Suppliers', 'Shippers', 'Purchase Orders', 'Customers', 'Purchase Order Details', 'Invoices', and 'Order Products'. The main area displays a table titled 'Active Order Details' with columns: Order, Product, Purchase Order, Quantity, Unit Price, Discount, and Order Detail. The table contains 20 rows of order details. On the right, the M365 Copilot chat interface is open, showing a conversation about the top-selling products for the quarter in Orders. A red box highlights the 'Copilot' button in the top right corner of the chat window.

5. Now let's give this prompt to M365 Copilot to generate chart and analysis trends based on the data in this app: **Show me Overall sales trends and performance of products analysis for this quarter. Compare the sales performance for this quarter with last quarter. Give me the results in chart format and downloadable report**

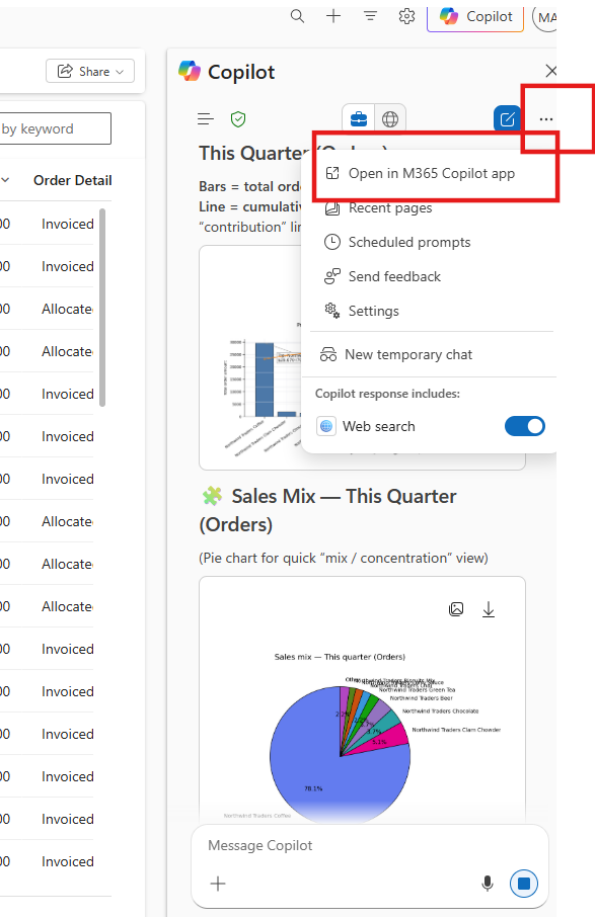

Microsoft

Power CAT | The Intelligent Enterprise-Power Platform  
& AI for Frontier Firms

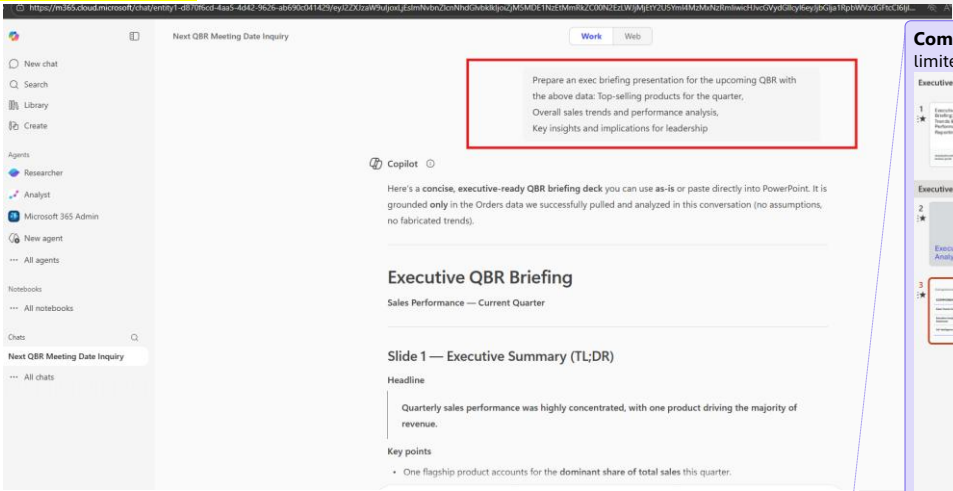

6. In order to take further action on the analysis trend click on the ellipses in the Copilot and open the chat in M365 Copilot app as shown below:

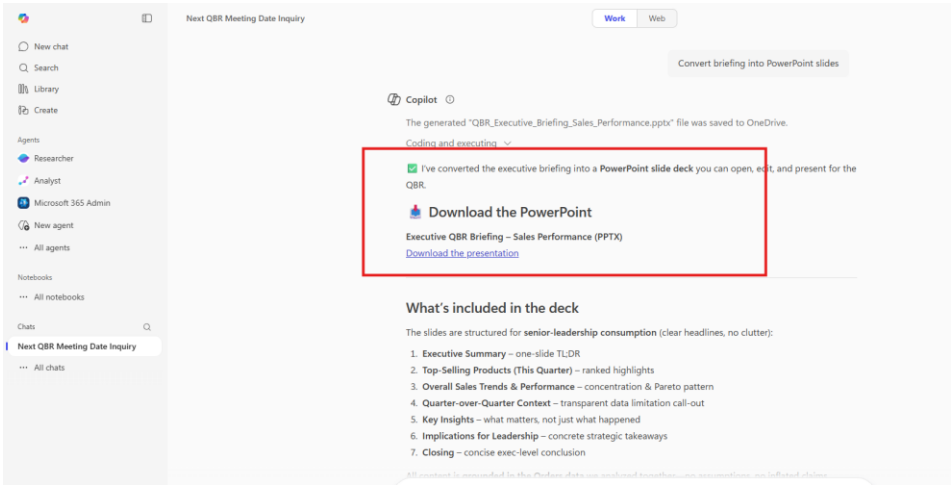

Microsoft

Power CAT | The Intelligent Enterprise-Power Platform  
& AI for Frontier Firms

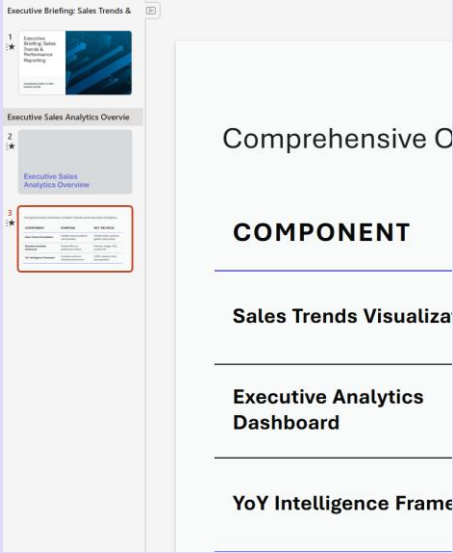

7. Give the following prompt to the M365 Copilot to create a power point presentation based on the trend analysis data: **“Prepare an exec briefing presentation for the upcoming QBR with the above data: Topselling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership”**selling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership”-selling products for the quarter, Overall sales trends and performance analysis, Key insights and implications for leadership”

8. You should be able to download the presentation generated by M365 Copilot:

Commented [RS17]: The downloaded ppt was very limited, without any proper content

Commented [RC18R17]: +1 I got a couple generated and in both cases it has slides about types of charts and what kind of analysis is possible. There is not actual data populated.

Commented [BI19R17]: Same experience and no proper content in the generated ppt.

Commented [SI20R17]: +1 PPT generated and no proper content in the generated ppt

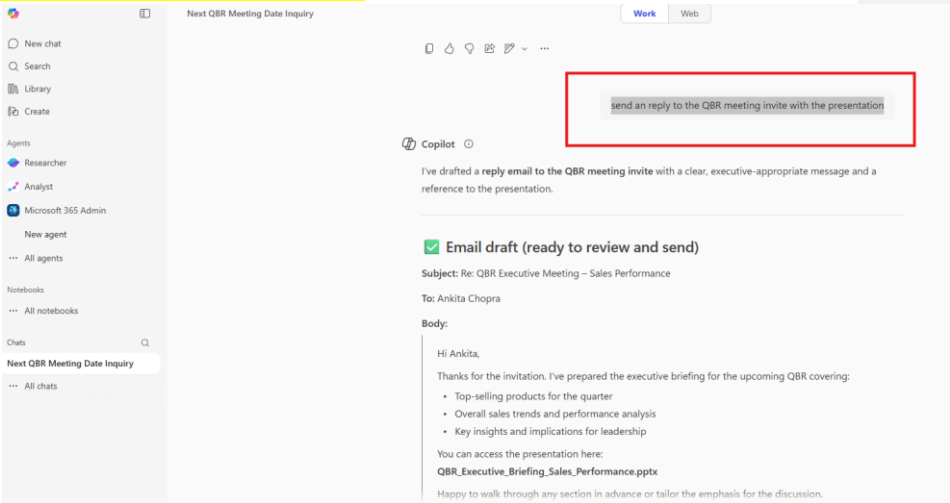

Commented [MS21R17]: The quality will depend on which M365 deployment ring you are in. Quality is much improved in inner rings, but I don't have visibility into when this rolls out to customer tenants. Best suggestion is to use thumbs down and provide feedback and the appropriate M365 team will see it.

Commented [LT22]: The ppt has a table for sales revenue by week, still no charts are showing.

Microsoft

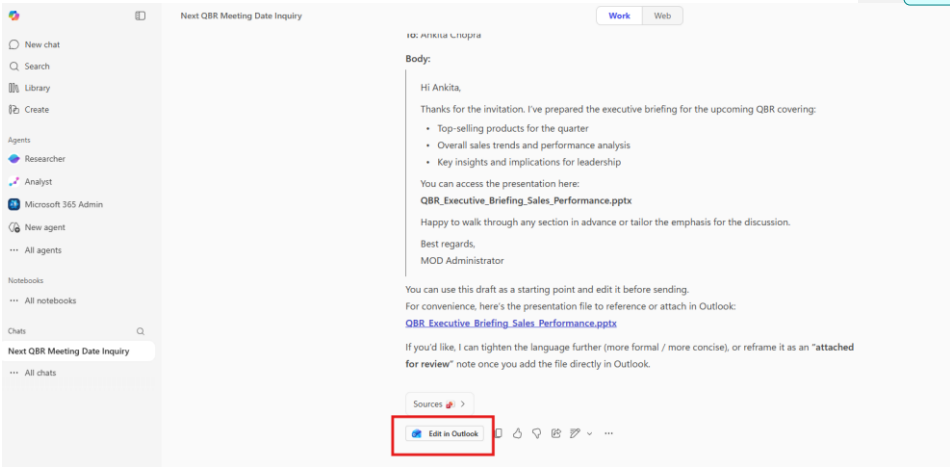

Power CAT | The Intelligent Enterprise-Power Platform  
& AI for Frontier Firms

9. Give the following prompt to create an email reply for the executive meeting: **“send a reply to the QBR meeting invite with the presentation”**

10. Click on “Edit in outlook” option to directly edit the response in outlook and send the email.

Commented [LT23]: Edit in Outlook is not showing

6. Lab completion

Congratulations! You’ve built an Intelligent App.

**Commented [RS24]:** Some ideas to include as exercises:

- 1- Possibility to mention other agents like Research or Custom Agents
- 2- Possibility to Configure the Agent in Copilot and show the customization possibility
- 3- Possibility to predefine a copilot Agent to show by default
- 4- Possibility to add “Custom Prompts”
- 5- Another cool scenario is to have a word document in Sharepoint and connect the data of the App with Data outside the App. Something like “give me information about the contracts with accounts in the top 3” - where the contracts are in Sharepoint not in DV.

**Commented [MS25R24]:** #3 is not possible in public preview. It’s on the roadmap and high priority. We’ll let you know when it is possible. #4 is possible if you directly select the agent with the navigation panel. It is not possible when you at mention an agent. It will be part of the work related to #3.
